THE HISTORY OF NEW SOUTH WALES.

CHAPTER I.

SECTION VI. (*Continued.*)

ANALYSIS OF THE PROCEEDINGS OF THE LEGISLATIVE COUNCIL OF NEW SOUTH WALES, CONSTITUTED UNDER THE ACT OF PARLIAMENT 5 & 6 VICT. C. 76, DURING THE SESSIONS OF 1843 AND 1844.

REPORTS OF SELECT COMMITTEES.

SESSION 1843.

FIFTEEN Select Committees were appointed by the Council during the Session 1843. The reports of two of these, viz: of that appointed to prepare a draft of standing orders for the business of the Council, and of that to which the Registry Bill was referred, were not printed. The remaining

thirteen Reports, however, are before the public, and contain, with the documents appended to them, a vast amount of information upon the present condition of the colony. A succinct analysis of these will now be offered to the reader.

1.—SCOTS' CHURCH PETITION COMMITTEE.

To this Committee was referred the Petition of the Trustees, Elders and Committee of Management of the Scots' Church, Sydney, praying the Council to recommend to his Excellency to place on the supplementary estimate a sum not exceeding £1,480, towards the liquidation of the debt on the Church. The Committee reported in favour of the petition, and moved the Council to address his Excellency in recommendation of its prayer. His Excellency declined, however, to accede to the wishes of the petitioners, on the ground that "the remission of a debt of £520, due from the trustees to the government, was considered, so lately as the year 1841, to be a final settlement of the claims of the Church on the Government."

2.—OVERLAND ROUTE TO PORT ESSINGTON COMMITTEE.

A select Committee was appointed on the 3rd of October, in consequence of the following resolution

of the Council, moved by Dr. Nicholson: "That whereas the establishment of an overland route, between the settled parts of New South Wales and Port Essington, will be attended with important additions to our geographical knowledge of the interior of Australia, and is an object, the accomplishment of which is also likely to be attended with great advantages to the commercial and other interests of this colony, by opening a direct line of communication with the islands of the Eastern Archipelago, with India, and other parts of Asia. Resolved, that a Committee be appointed for the purpose of inquiring into the practicability of such a design, and the means whereby it may be carried into effect; and that they do report to the Council the result of such inquiry, with as little delay as possible."

Though the extension of geographical knowledge, and the formation of new commercial relations, are set forth as the ostensible objects for which this Committee was appointed, there was another object to which the Committee directed considerable attention, viz: the possibility of procuring labourers from the smaller islands of the Indian Archipelago. With reference to this subject, the Committee examined George Windsor Earl, Esq., a gentleman who had been engaged during a period of five years in visiting various ports and islands of the Indian Archipelago. From the evidence of this gentleman, it appeared

highly probable, that a valuable description of labourers might be procured from the Serwatty Islands and Timor Laut, a chain of islands extending to the eastward of Timor. "These islands," observed Mr. Earl, "are very populous, so populous indeed, that sometimes the distress among them is very great. The last time I visited Kissa, an island near Timor, where there are a considerable number of Christians,* they had been suffering from drought for three years, and out of a population of eight thousand, they had lost three hundred from starvation, or from diseases produced from being obliged to resort to a very

* These islands were christianized by Dutch missionaries, about two hundred years ago. The following additional extract from the examination of Mr. Earl, having reference to this subject, will be interesting :—

Question 42.—"Have the people of many other islands besides Kissa, been evangelized by the Dutch?"—"There are many Christians on the other Serwatty Islands, and also on Timor and Rattee. The people of Amboyna, about thirty-five thousand in number, are Christians almost to a man. This island is the head-quarters of Christianity in this part of the world. There are also a few on the Arra Islands. The natives who are not Christians are Pagans, except at Ceram, where there are a few Mahomedans."

Question 43.—"Have they ministers of religion?"—"They have; they call them teachers, and they are chiefly natives of Amboyna."

Question 44.—"Are they well educated?"—"Not highly; they read and write very well; almost their only book is the Bible."

inferior description of food, such as the young shoots of trees. If I had had the means at that time to have removed them, a half or two-thirds of the population would have been glad to have gone to Port Essington with me." The following question was proposed by Mr. Elwin: "What do you think is the difference between the natives of these islands, and the people of Continental Asia, as to their ability to bear cold?"—"The people of Continental Asia could bear it best of the two, but even these would suffer greatly round Cape Leeuwin, so much so, that I think that few Indian labourers could be induced to come by that route, when they became acquainted with what they would have to endure." In answer to a question from Dr. Nicholson, Mr. Earl added: "indeed it is my opinion, that no description of Indian labour can be advantageously brought here, unless some other channel is found than that round Cape Leeuwin."

With reference to the practicability of an overland route, and the desireableness of attempting it, the Committee examined Sir Thomas Livingstone Mitchell, Surveyor-General of the colony. His opinion was most decisive on the subject. The substance of his evidence is summed up in the last answer.

Question 17. "Do you, from a consideration of the subject, anticipate many advantages from opening such a line of communication as that proposed to

Port Essington?"—"I do. Tropical Australia is wholly unknown within the coast lines; the proposed undertaking would be of considerable advantage to the colony; and, both as to the immediate results to be expected, and the objects to be ultimately accomplished thereby, this seems to be the most important expedition that could ever be undertaken in Australia. The season happens to be more favourable, from the rains, than any we have had for many years past. The direction of the line of route proposed would be available, not to our colony only, but to that also of South Australia, from whence a route along the right bank of the Darling could join at Fort Bourke. From Melbourne, a similar route to cross the Murray about the junction of the Murrumbidgee, would also fall in with the line in a nearly straight direction. New Zealand is in the prolongation of the same route through Sydney; and from whatever colonies may be established at, and beyond Moreton Bay to the northward, the roads connecting them also with this proposed general route would be short and direct, externally. In thus opening a road through Australia from her infant colonies, towards the peopled parts of the earth, the most flattering prospects seem to depend on the success of such a journey; greater certainty and celerity in our communication with the mother country; more immediate access to India and China; cheap labour (perhaps) brought within our reach, this depending

on an easy route being discovered. In short, what may intervene along a line of such importance, ought in my opinion, to be ascertained at almost any risk. The journey is long, but it tends directly towards England, yet at the same time, towards India and China. The line would bring the colony, where population is scarce, into contact with places where it is most abundant, and a vast extension of the human race, to the southward of the equator is among the probable results."

It is unnecessary to say that the Committee reported favourably on the proposed expedition. An address accordingly was voted by the Council, requesting that his Excellency would be pleased to take such steps as might be necessary, for carrying into effect the recommendation of the Committee, and that a sum might be placed upon the estimates, to meet the necessary expenses involved. His Excellency, however, while fully recognizing the importance of the proposed attempt to reach Port Essington by an overland route, declined "undertaking without the knowledge of her Majesty's government, an expedition of so hazardous and expensive a nature."

In order, therefore, to obtain her Majesty's pleasure on the subject, his Excellency promised to lose no time in transmitting a copy of the address to the Secretary of State for the Colonies.

3. POSTAGE RESOLUTIONS' COMMITTEE.

A series of resolutions were proposed to the Council by Dr. Lang, the object of which was to recommend a reduction in the rates of postage chargeable on letters. It was proposed that town letters should be charged only one penny, irrespective of weight up to four ounces ; that for greater distances, the charge should be two pence per half ounce ; that for ship letters, the charge should be two pence, irrespective of weight, but that the inland postage should be added ; that the privilege of franking should be abolished ; and that the postage of the military, commissariat, and convict departments should not be chargeable on the colonial revenue.

The Report of the Committee to whom the resolutions were referred, was generally favourable, the only exception being in the case of ship letters, in the postage of which the committee did not think it necessary to make any charge. The postage at present chargeable on ship letters whether posted or delivered within the colony, is three pence, in addition to inland postage.

Notwithstanding the recommendations of the Committee, however, the Council did not see fit to entertain the amendments of the Postage Act founded on those recommendations ; the Bill introducing those amendments, being thrown out

in a Committee of the whole House. It is understood, however, that the government are very desirous of effecting a reduction in postage charges, so soon as it may be done with security to the revenue.

4. MONETARY CONFUSION COMMITTEE..

This Committee was appointed, on the motion of Mr. Windeyer, "to consider of the means of staying the further evil consequences to be apprehended from the monetary confusion, adverted to in the speech of his Excellency, the Governor, at the opening of the present Session of the Council." The Committee consisted of ten Members,* the largest number which can, according to the standing orders, be appointed to form a Select Committee, and was perhaps the most important Committee of the Session, not only on account of the results which flowed from its labours, but on account of the mass of evidence which has been given to the world respecting the late monetary crisis, which has so severely affected every class of the colonial community. Some portions of this evidence cannot fail to be interesting to the reader,

* The Members were Mr. Windeyer, chairman; the Colonial Treasurer, the Auditor General, Mr. Ebdon, Dr. Lang, Dr. Nicholson, Mr. Wentworth, Mr. Murray, Mr. Hamilton, and Mr. Coghill.

and no apology is necessary for making copious extracts.

William Hamilton Hart, Esq., Superintendent of the Bank of Australasia, being asked his opinion respecting the present monetary embarrassment of the colony, stated, that, in the first place, he attributed it to the depreciation which had taken place in the home markets in the staple commodities of colonial commerce—wool and oil. “A very material agent too in bringing about the crisis was the wild spirit of speculation which pervaded all classes of the community in the years 1839, 1840, 1841—a speculative mania, which, unhappily, was fostered and encouraged by the banks, and by the government.”

The evidence of Mr. Hart is corroborated by that of Mr. Maclaren, manager of the Union Bank of Australia, and by a number of the most influential gentlemen of the mercantile community; but perhaps the most valuable evidence was that of the Hon. Campbell Drummond Riddell, Esq., the Colonial Treasurer, who fully explained to the Committee, the whole history of the transactions of government with the Colonial Banks. His evidence on the subject is too important to admit of curtailment.

Question 2.—“Have you formed any opinion as to the causes of the present embarrassments?”—“I am of opinion, with a great many who have been

examined here, that they arise from the speculation which took place, between the years 1836 and 1840, more especially the speculations in the purchase of land.

3. "Will you be kind enough to state to the Committee, to what extent that cause operated; do you know what sums of money were received for the purchase of land at those intervals?"—"The total amount for the five years was £809,457. 1s. 9d.

4. "In what way do you think the purchase of land, to that amount operated to produce our present distress?"—"If the purchase of land had taken place from capital, actually imported into the colony, I should say it would not have produced the evil that has resulted, but I conceive that the means with which the land was purchased, arose from the facility which the banks afforded by their discounts, from 1836 to 1840. The banks were forced to discount liberally, from the large amount of government deposits that accumulated upon them during those years, on which they, latterly, paid interest; this liberality of discount, was suddenly put a stop to, when the government withdrew its deposits, to pay the ship-owners for the immigrants brought out; in confirmation of this opinion, I have here a book which was kept, and which shows the amount of deposits in the banks, during that period, beginning on the

1st January, 1836; originally, we kept only about £5,000 in each of the banks, and all over and above that sum was retained in the shape of coin in the vault. In the beginning of 1836, we had £146,500 in the chest, and only about £16,000 or £18,000 in the banks; there were then four banks. Our revenue increased during that year, till in the month of May, we had £181,000 in the chest, and about £18,000 in the banks. In the month of September, we had increased our deposits to upwards of £30,000 in each of the banks, and the amount I have before mentioned in the coffers. This state of things continued with not much interruption, only that we occasionally increased or diminished our coin in the coffers till the beginning of 1837, when I find that we had £218,000 in the Treasury Chest, and at the same time, upwards of £30,000 in each of the banks. We continued increasing gradually our money in the chest, and also increasing our deposits in the three banks, (for, at this time we had withdrawn our deposits from the Bank of Australasia, in consequence of a dispute, relative to the furnishing of quarterly returns, which they objected to as being contrary to their charter) until they arrived at £123,000. The greatest amount we had up to September, 1837, was £124,000, and £245,250 in the coffers; the average for the year 1837 was £237,000 in the coffers, and in the banks

£127,000 ; the average for 1838 was about £180,000 in the coffers, and £90,000 in the banks, being a considerable diminution.

5. “ What was the cause of that diminution ? ” —
“ We had large sums to pay to the commissariat, and also paid a great deal for immigration in that year. We commenced in 1839 with £163,000 in the vault, and about £90,000 in the banks ; sometimes increasing, and sometimes diminishing, but rather diminishing than increasing ; (for at one time I find we had not more than £70,000 in the banks, but still the same quantity in the Treasury Chest) till, at the close of the year, I find that we had about £75,000 in the banks, and £124,000 in the chest. In 1840, which I perceive to be the year in which there was the greatest speculation in the purchase of land at Port Phillip, the purchases there amounting to £219,127, we very soon lowered our money in the vault, I presume by paying to ship-owners and their agents here, till February, when we had £38,900 ; we then had five banks to deal with, and the aggregate of the deposits in the banks at that time, was about £66,000 or £67,000 ; from £109,000 which was the general total, we very soon rose to £165,000, in the month of May, still retaining only £39,000 in the Treasury chest, all the rest being in the banks, of which the Branch Bank of the Bank of Australasia, at Melbourne, had at one time £32,500. This state of things continued till the

month of July, when, I find, we had a balance of £227,000, the whole of which was in the banks, with the exception of £39,000 in the coffers.

6. “ Had the government begun at this time to charge interest on deposits ? ” — “ Yes, at the rate of $2\frac{1}{2}$ per cent, first, and afterwards at 4 per cent. In the month of July, 1840, we had within a trifle of £200,000 and the sum continued to increase till August, when we had £248,000 in the banks ; in October we had no less than £270,000 in the banks, paying interest, the average being about £50,000 in each bank, and £10,000 in each of the branches of the Union and Australasian Banks, at Port Phillip, there being still £38,900 in the coffers ; during this month, the sum continued to increase, until it arrived at £281,000, which was the largest sum we ever had in the banks. Now, my theory is, that when we kept this large amount of capital in the banks, the banks were obliged to look out for discounts, and the facility which was thus afforded for obtaining means to purchase land produced that wild spirit of speculation, which prevailed in that year ; moreover, I find in that year, when we kept most money in the banks, the return of land sales was largest ; at Port Phillip alone, amounting to £219,000. In the commencement of 1841, the government withdrew their large deposits, and made special deposits of £15,000 at 7 per cent ; that did not diminish our general average, but it

diminished the common deposits by that amount, the general sum gradually decreased, during 1841, till, in the beginning of August, we were obliged to take a portion of the special deposits, and place them to the common deposits, in order to meet our current expenses, and then the special deposits were reduced to £8,000 in each bank. Before the end of the year, all was at common deposit, and the sum was reduced to £70,000 in all, of which £38,000 was deposited in the vault. The last remainder of £245,250 and £30,000, was divided among the eight banks: so that we drew out of the banks between November 1840, and November 1841, about £260,000.

7. "At present, I presume, your deposits are still less?"—"I think about £12,000, they have been as low as £6,000; that does not, however, include Port Phillip; we have there about £16,000, deposits besides."

* * * * *

14. "Have you considered of any means by which the present difficulties of the colony may be relieved, and a recurrence of them prevented?"—"With regard to the present distress, I do not see that any action of the government could be of much benefit to the persons who are suffering most, who, I believe, are the settlers."

15. "Do you not think that if such operations as you have described were prevented in future, that it would prevent the recurrence of so much of

the evil as is connected with those operations ?"—
“Decidedly ; but the government had a difficult task to perform in those days. If they had gone on accumulating money in the Treasury, they would have drawn all the gold and silver out of the Banks.”

16. “Supposing the government had not lent its receipts from land, which it afterwards paid to the ship-owners, to the Banks for the purposes of discount, would not a stop have been put to the speculation which existed ?”—“Yes ; but then you would have had no land fund. You would not have had the means of bringing out the large number of immigrants you did in 1841 ; but the colony would have been in a much healthier state.”

The foregoing extracts from the evidence of the Colonial Treasurer, though long, are extremely valuable, on account of the (almost) official acknowledgment which it contains of the injudicious manner in which the government interfered with the circulation. The sequences which the honourable gentleman attempts to draw in the two last answers, are not remarkable for logical accuracy, nor is it very clear from what premises they are supposed to follow. It appears to be assumed, that government had no alternative but to lodge the land fund in the Banks, or suffer it to accumulate in the Treasury vault ; but surely it requires no official illumination to show that, if the money had been regularly expended in its legitimate channel, instead of the weight of the expenditure being left till the

year 1841, in which year upwards of £300,000 was paid for immigration, the "difficult task" which the government had to perform, would have been vastly simplified. The amount of the expenditure was as nothing; but the *suddenness of the draft*,* which had to be collected from the members of a community immersed in speculations, might have tried the stability of an old country; and that New South Wales staggered severely, is so far from being a matter of surprise, that the circumstance of her recovery proves more forcibly than ever, the strength and sufficiency of her resources.

As a remedy for the disordered state of the mercantile community, the select Committee recommended the intervention of the credit of the colony, in favour of all those who might be in a position to give adequate security: — "To illustrate," says the Report, "the mode in which your Committee con-

* The Baron Rothschild having, on some occasion, a grudge against a well-known banking firm in London, is said to have tried a most ingenious expedient for ruining them. He deposited a million of sovereigns in the Bank, expecting, that, as a matter of course, the money would be circulated. In a few days he drew a cheque for the whole amount, which, to his great surprise and chagrin, was honoured, and in the identical coin which he had deposited; the head of the firm having suspected a trick, had ordered the box of gold to be locked up till wanted. There is a moral to be deduced from this anecdote, which may be left to the sagacity of the government and of the Banks to discover.

sider that the credit of the colony may be advantageously brought into action, it will only be necessary here to mention the leading features of the *Prussian system*. A landed proprietor wishing to raise money upon his property, applies to a Land Board, which values it, and agrees to lend him the credit of the State for one half of the valuation. The land owner mortgages his property to the Board, which then gives him a paper called a *Pfandbriefe*, or pledge certificate, which contains the name of the mortgager of his estate, the letter and number of the transaction in the books of the Board, and two official signatures. The interest to be received by the holder of the *Pfandbriefe* is made payable in half-yearly dividends, on fly-leaves called *coupons*, calculated for two years in advance, which are guaranteed by the Board. These *coupons* are cut off and presented at the Treasury, where they are paid as they become due, or they may be cut off before hand, and circulated till they become due."

In order to establish the credit of the new circulation which it was thus proposed to introduce, it was further suggested that the government should issue orders for small amounts, and that any mortgager should be authorized to claim from the Land Board a certain portion of these notes :—"in lieu of pledge certificates, which notes should be a legal tender all over the colony, and should of necessity, form half of every sum paid to the government,

except for the purchase of land, and be convertible into coin at the Treasury on demand. Half of the Revenue being paid in coin, and half in colonial land-board notes, it is clear," pursues the Report, "that the government would always be prepared to meet its engagements, provided a proper limit were placed on the amount to be allowed to the Land Pledgers."

The Bill brought in by Mr. Windeyer to give effect to the recommendation of the Select Committee, passed the Council, though not without considerable debate, many of the members being of opinion that the Colonial Executive had no power to pledge the public faith of the colony in the mode suggested. This view of the case was also taken by his Excellency the Governor; who withheld his assent from the Bill. Perhaps, however, the conviction expressed in his opening speech, that commercial difficulties were not remediable by legislative enactments may also have influenced his decision.

5.—SAVINGS' BANK AMENDMENT COMMITTEE.

IN the month of May, 1843, the depositors in the Sydney Savings' Bank took alarm, under the notion that government had withdrawn its security, and a run on the Bank took place. At that time the Bank had only £4,000 in hand, and was, consequently, ill provided for such an event, but they managed to obtain assistance from the other Banks,

to the extent of £23,000, which large sum was actually drawn out in three days. To prevent a similar occurrence, and at the same time to create a feeling of perfect confidence in the minds of the depositors, were the objects contemplated by the Savings' Bank Amendment Bill, which was referred to the consideration of a Select Committee. A clause had been inserted in the Bill at the suggestion of the Governor, authorizing him to guarantee any loan which the Bank might find it necessary to make ; and the Committee also recommended that the Council, by a distinct resolution, should assure his Excellency of their determination to make good the engagements into which he might enter for the purpose of preventing any loss to the depositors. It was also found necessary, in order to prevent the inconvenience of a run, to provide that any notice of withdrawal from depositors of £50 and upwards should be at three months date ; and similar notices from depositors under £50 at one month's date. By these judicious regulations, the confidence of the public in this valuable institution has been fully restored.

6.—WATER POLICE COMMITTEE.

An Act had been passed by the late Council, the object of which was, the better regulation of seamen in the colony, and the establishment of a Water Police. The principal employment of this

police was to row about the harbour, as the ordinary police perambulated the streets, in search of offenders. The establishment was considered as unnecessarily expensive, and the Select Committee, accordingly, recommended the abolition of the Superintendentship, both in Sydney and Port Phillip, and the transfer of the executive duties of the office to the Principal Superintendent of Police, and the judicial duties to the Police office. Other reductions in the Department were recommended, whereby a saving has been effected of about £1,700, without at all impairing its efficiency.

7.—DISTRESSED MECHANICS' PETITION COMMITTEE.

The resolutions adopted by the Council, in consequence of the Report of the Committee, have already been laid before the reader; and it is, therefore, unnecessary to enter again on the subject in this place.

8.—CROWN LANDS SALES' COMMITTEE.

Of this Committee, the Report recommended a reduction in the minimum upset piece of land; condemned the abstraction of capital for immigration purposes; proposed, that, instead of sending the proceeds of Land Sales out of the colony, a remission should be allowed in the purchase-money to

immigrants, in proportion to the cost of their passages to the colony ; and strongly condemned the Act of Parliament (5 and 6 Vict.) for regulating the price of land in the Australasian colonies. The resolutions adopted by the Council, in consequence of this Report have been already quoted.

9.—IMMIGRATION COMMITTEE.

The important subject of immigration, to which so large a space has already been devoted, has not been neglected by the New Council. On Friday, August 18, on the motion of Dr. Nicholson, a Select Committee was appointed, “to take into consideration the necessity, and the means for reviving immigration, and for ensuring the continuous introduction of a due supply of shepherds and agricultural labourers ; an adequate supply of labour, and an increase of population, being essential to the present interests and future advancement of the colony.” It will be unnecessary again to enter into the general question of immigration, the importance of which to the colony can hardly be over-estimated. The late troubles, however, have taught us the evil of sending the whole of our Land Fund out of the country ; and the Immigration Committee of 1843, accordingly suggested other plans for securing a continual supply of labour. The subject is handled in a very masterly style in the Report, and it may be proper, therefore, to quote a few sentences :—

“The absence of any land fund, at the present moment, and the unlikelihood of any being created during the existence of the present land regulations, render any reference to it as a present means of carrying on Immigration, nugatory. Were, however, the upset prices of waste lands again reduced to 5s. an acre, and a land fund once more created, the proposal of expending the money thus realized, in the bringing out of Immigrants, appears to your Committee one of doubtful expediency. Such a measure must necessarily be attended with an exhaustion of the circulating medium of the colony, and would be calculated to bring on a renewal of the evils with which it is now contending. Capital appears to be an element as essential to the prosperity of the colony, as labour itself; your Committee, therefore, feel that, however indispensable labour may be for developing the resources of the country, capital is not less so for its successful application. Circumstanced, as the colony thus is, suffering from a universal prostration of its energies, consequent upon the export of its capital for the introduction of labour from Britain, and still subject to a want of labour and population, scarcely less urgent than what had previously existed, without a land fund, or any means by which one may be created—the present resources of the colony cannot but be regarded as utterly inadequate to any effort for the renewal, or support of Immigration. When, however, the fact is brought more fully under the

notice of her Majesty's Ministers, of the enormous expenditure incurred by the colony in relieving Britain of her starving and redundant population, your Committee trust, that the British Government may be induced to recommend to Parliament the repayment of a portion of the sum, either by a grant to the Colonial Exchequer of one half the amount thus expended by the colony, or by sanctioning the appropriation of a like amount in aid of Immigration hereafter. No stronger incentive to such an act of justice could be urged, than the direct interest the mother country has in the support of her Colonial dependencies, as an outlet for her population—a market for her manufactures—and the general extension of her commercial influence.”

To such a claim as this, it is to be feared that the Home Government will not be very ready to accede, nor did the Committee appear to entertain very sanguine expectations on the subject. They made, therefore, another suggestion, viz: that a remission should be allowed in the purchase of land, of the money paid by the settler for his passage. The language of the Report may now be resumed :

“Your Committee are aware that such a regulation is already in force to a considerable extent, and that persons willing to emigrate to the colony, can, by placing a given sum in the hands of the Land and Emigration Commissioners, become entitled to the selection of a proportionate number

of acres of land on their arrival here. The regulation herein referred to is, however, too limited in its character to be made practically beneficial. The previous deposit of money in the hands of the Commissioners in England, is a step to which individuals disposed to emigrate may naturally feel some repugnance; for it is only reasonable to suppose that almost every person will be desirous to retain the disposal of his capital in his own hands, until he can become personally conversant with the character of the country to which he is about to emigrate. If, however, it were previously understood that all persons should receive an equivalent in land for their passage money, or for that of their families and dependents, on their arrival, a strong incentive would be afforded for the introduction of a numerous class of immigrant families, and small communities combining the social grades of landlord and master, who might be thus induced to emigrate in bodies, and in their new locations preserve those respective relations amongst themselves, which they had previously maintained at home."

Towards the close of the year 1843, intimation was received in the colony, that the Home Government intended to revive immigration to Australia, to the extent of about five thousand souls. The greater part of these have arrived, and notwithstanding the great depression of the colony, have, with very few exceptions, met with

employment in the interior. A very great amount of the distress which has been felt by the immigrants who had previously arrived, arose from the circumstance that they were of a class of persons who should never have been sent here at all. On this point the Report observes:—

“The evil thus created to the colony is great ; its resources have, to a large extent, been expended in the introduction of a class of persons unsuited to its wants ; unproductive, so far as regards its great staple commodity ; and, who, from want of work, and the consequent cry of distress amongst them, discredit the statement, that the species of labour really applicable to, and indispensable for, the country is needed.”

It might have been added, that hundreds of these individuals, who now complain so loudly for want of employment, came out here under a gross fraud on the colony, professing themselves to be of trades which were within the bounty regulations, while in reality they were of other trades, which were not required. For much of this fraud, the agents of the ship-owners were to blame. They imposed on the ignorance, or credulity, of the simple, in order to fill their ships, and crammed their dupes with lies, to secure the payment of the bounties. But when a man either eagerly joins, or suffers himself to be tempted to join, in a fraud, he cannot be entitled to much compassion, if he pay the penalty of his guilt, by poverty and

suffering. The facts, which it is of importance to circulate through the length and breadth of the United Kingdom, are, that of skilful tradesmen in every trade, whether of use or luxury, there is an abundant supply already in the colony ; but that of shepherds and good agricultural labourers, and more than all, of good domestic servants, there is still a great want. The assertion of the Committee is entirely justified by circumstances, “that four thousand shepherds and farm labourers, introduced annually into the colony, would readily find employment, at rates of wages of from £10 to £12 per annum, with lodging and fuel, accompanied with a ration, which, from a general average, consists of not less than the following proportions, viz: 10 lbs. of meat, 10 lbs. of flour, $1\frac{1}{2}$ lbs. of sugar, 3 ozs. of tea, or as a substitute for the two latter, an adequate supply of milk. The most desirable class of immigrants are young married couples, not over thirty years of age, and with not more than one or two children. When both man and wife are capable of taking employment on a farm or sheep station, the proprietor would in very few cases object to give rations for the children, even when the number increased ; but cases have been known of men seeking employment in the interior, who had a useless wife and five or six young children, for all of whom the applicant expected to get lodging and rations, in addition to money-wages, which the settler could hardly give

to a single man. Men of this class have no business in Australia. It is a country of hard labour, and cannot feed idle mouths. If then men with large families will force themselves into a community where they are not wanted, and where they are plainly told they have no prospect of employment, they must not be surprised if they feel the effects of their imprudence.

10. CAMPBELL TOWN DISTRICT COUNCIL BOUNDARIES' COMMITTEE.

To this Committee was referred a dispute which had arisen, respecting the boundaries to be assigned to the Campbell Town District Council, founded on the conflicting interests of individuals residing in two divisions of that part of the country, one part of whom used one road, and another another. The dispute was purely of local interest, and could scarcely be made intelligible to the general reader.

11. INSOLVENT ACT AMENDMENT COMMITTEE.

It has been mentioned in another place, that an Insolvent Law had been passed by the late Council, for giving relief to insolvents, and providing for the due administration, collection and distribution of insolvent estates. A Bill for amending that Act was introduced to the new Council by Message from his Excellency, the Governor, which was

referred, on the motion of Dr. Nicholson, to a Select Committee. Several important modifications were proposed, the discussion of which, however, would not be likely to interest the reader; and a sincere wish is added, that he may never be compelled to become practically acquainted with them.

12. DEFICIENCIES IN ESTIMATES' COMMITTEE.

A statement had been laid before the Council by the Colonial Secretary, of sums appropriated for the service of the year 1842, but not expended, and of sums required to supply deficiencies in the amounts appropriated for certain departments and services for that year. It appeared that from unforeseen contingencies, his Excellency, the Governor, had either been compelled, or fancied himself compelled, to appropriate certain sums to the public service without the authority of the old council, during the year 1842. In order to cover these irregularities, a retrospective Act of Appropriation was solicited at the hands of the Council; and on the motion of Mr. Windeyer, the statement of the Colonial Secretary was referred to a Select Committee. The Committee, in their Report, comment pretty freely on the want of circumspection with which the public accounts had in some cases been framed, and appear to have thought, that the "contingencies"

might have been in a great measure avoided. They condemned entirely any appropriation of the public revenue, without the authority of the Legislative Council ; but considering that the practice had been suffered to pass by the old Council, they did not feel justified in recommending an opposition to the retrospective Act of Appropriation which was desired.

13. COUNCIL LIBRARY COMMITTEE.

This Committee was appointed merely to consider the arrangements for fitting up and opening the Library of the Council. Their Report is confined entirely to matters connected with the Library, and is only interesting to the Honourable Members themselves.

SESSION 1843. ACTS.

SUMMARY OF PROCEEDINGS ON BILLS INTRODUCED DURING THE SESSION 1843.

SESSION 1843. ACTS.

31

Short titles of Bills.	How initiated.	Date of First Reading.	Passed or otherwise.	Assent or otherwise.	Remarks.
1. Solvent Debtors	Mr. Wentworth.	Aug. 8.	P. Sept. 22.	A. Nov. 3.	
2. Lien on Wool and Live Stock	ditto.	.. 10.	P. .. 15.	A. Oct. 9.	
3. Postage Act Amendment	Message from Governor.	.. 16.	Lost.	Thrown out in Committee.
4. Water Police Act Amendment	ditto.	.. 17.	P. Dec. 22.	A. Dec. 27.	Referred to a Select Committee.
5. Maintenance of Lighthouses	ditto.	.. 17.	P. Nov. 24.	A. Dec. 6.	
6. Slaughtering Act Amendment	ditto.	.. 17.	P. Sept. 8.	A. Sept. 26.	
7. Australian Auction Committee	Mr. Therry.	.. 22.	P. Aug. 31.	A. ..	
8. Office of Sheriff	Message.	.. 30.	P. Dec. 8.	A. Dec. 22.	
9. Interest of Money	Mr. Wentworth.	.. 25.	Lost.	Thrown out on second reading.
10. General Registry	Message.	Sept. 8.	P. Dec. 20.	A. .. 28.	Referred to a Select Committee.
11. Saving Bank Law Amendment	ditto.	P. Nov. 10.	A. Nov. 22.	Ditto.
12. Governors' Salary	Mr. Windeyer.	Oct. 2.	Withdrawn.		
13. Friendly Societies	Mr. Wentworth.	.. 13.	P. Nov. 24.	A. Dec. 21.	
14. Committed Felons' Discharged	Attorney-General.	.. 18.	P. Oct. 27.	A. Oct. 31.	
15. Campbell Town District Council	Mr. Bowman.	.. 20.	P. Dec. 15.	A. Dec. 22.	
16. Sydney Dispensary	Dr. Nicholson.	.. 24.	P. Nov. 15.	Reserved.	Reserved for her Majesty's pleasure.
17. Licensing Act Amendment	Colonial Secretary.	.. 27.	P. ..		
18. Refined Sugar	Dr. Nicholson.	Nov. 7.	Withdrawn.		
19. Monetary Confidence	Message.	P. Dec. 6.	Lost.	Assent withheld.
20. Distillation Laws	Mr. Windeyer.	P. Nov. 22.	A. Dec. 6.	
21. Corporations' Educational Powers	Message.	.. 9.	Lost.	Thrown out on second reading.
22. City Rates	Dr. Lang.	P. Dec. 8.	A. Dec. 12.	
23. Insolvent Act Amendment	Message.	.. 16.	P. .. 21.	A. .. 28.	Referred to a Select Committee.
24. Ports and Harbours' Act Amendment	ditto.	P. .. 8.	A. .. 12.	Previous question carried.
25. District Councillors' Qualification	ditto.	Dec. 1.	Lost.	
26. Lunatics	ditto.	Nov. 30.	P. Dec. 12.	A. .. 22.	To stand over till next session.
27. Hawkers and Pedlars	Mr. Wentworth.	.. 29.	Withdrawn.	
28. Doubly Convicted Offenders	Message.	Dec. 12.	P. Dec. 22.	A. .. 27.	
29. Ad Valorem Duties	ditto.	P. .. 21.	A. ..	
30. Customs' Regulation	ditto.	
31. Tariff	ditto.	Printed, to stand over.
32. Magistrates, Sydney and Melbourne	Attorney General.	.. 13.	P. .. 22.	Reserved.	Reserved for her Majesty's pleasure.
33. Appropriation Bill	Colonial Secretary.	.. 15.	P. .. 21.	A. .. 28.	

From the foregoing Table it will appear, that during the Session of 1843, (Anno Septimo Victoriæ), thirty-three Bills were brought into the Council; eight of which were either withdrawn, or thrown out by the Council, from one the royal assent was withheld by his Excellency; and of the remaining twenty-four, two were reserved for her Majesty's pleasure, and twenty-two received the royal assent.

The subjects of many of the measures have been noticed under the heads of "Resolutions," and "Select Committees." But little, therefore, requires to be added to the remarks which have already been made on the more important of them. A brief explanation, however, may be necessary to such readers as are only slightly acquainted with the peculiar circumstances which called for some of the enactments.

LIEN ON WOOL AND LIVE STOCK ACT.

(7 *Victoria*. No. 3.)

The effect of this Act is to enable sheep and cattle owners to give valid liens, on their wool from season to season, without parting the possession or management of the sheep, and to give valid mortgages on stock in the same manner. In order to render such liens and mortgages valid, it is necessary that the agreement should be made after forms given in schedules appended to the

Act, and that copies should be left duly verified on oath before an authorized officer of the Supreme Court.

These liens and mortgages entitle the mortgagee to the wool, or stock specified in the agreements, though the property remain in the possession of the mortgager, and though the mortgager should afterwards take the benefit of the Insolvent Laws. In this latter case, however, it is necessary, that the mortgage shall have been effected at least, sixty days before the date of the order for Sequestration.

SOLVENT DEBTORS' ACT.

(7 *Victoria*. No. 4.)

This Act, as well as the Lien on Wool Act, was intended to afford aid to parties really solvent, but who, from the great depreciation in property which has taken place, are not able to realize money to meet their engagements at the due time. Any person, who is desirous of obtaining time for the payment of his debts, may draw up, and verify on oath before the proper officer, a statement of his assets and liabilities; and if, on inspection of this verified statement, three fourths of the creditors, both in number and value, shall be of opinion that the party is solvent, and shall execute to him a letter of license,

declaring that they will allow him a specified time for the payment of his debts, this license shall also bind the other creditors, and the debtor shall be free from suit until the expiration of the time specified in the letter of license. The Act, being merely experimental, is limited for the present to two years. Several provisions were inserted against fraud on the part of the debtor, and enabling the creditors to keep a vigilant eye upon his movements, and the manner in which he employ his assets.

COMMITTED FELONS' DISCHARGE ACT.

(7 *Victoria*. No. 5.)

The effect of this Act is to enable Judges of the Supreme Court, or the Resident-Judge at Port Phillip, to discharge summarily, by warrant, persons who have been committed to gaol on charges of Felony or Misdemeanour, and against whom the Attorney-General, or Crown Prosecutor may decline to file any information. On receipt of a certificate to this effect from the Attorney-General, or Crown Prosecutor for the district of Port Phillip, any Judge may address a warrant to the Sheriff or Gaoler, who is bound immediately, and without reward, to release the prisoner.

LICENSING ACT AMENDMENT ACT.

(7 *Victoria*. No. 7.)

By the Act (2 Vict. No. 18) commonly called the Licensed Publicans' Act, it was provided that, growers and makers of wine from grapes, the produce of this colony, should not dispose of the same in quantities less than ten gallons. The object of the present Act was, to enable parties to sell their own manufactured wine in quantities not less than two gallons, and to provide against the disqualification of such parties as Justice of the Peace. The ultimate result contemplated was the promotion of temperance among the lower orders, by discouraging the use of ardent spirits.

FRIENDLY SOCIETIES' ACT.

(7 *Victoria*. No. 10.)

This is a truly excellent Act, and in its operations likely to produce the best effects among the labouring classes. The Societies entitled to the benefit of, or deemed to be within, the provisions of this Act, are those which are generally called Benefit Societies, the laudable object of which is to provide a fund for the assistance of their members in the event of sickness, old age, widowhood, or other natural

contingencies. All secret societies, having signs, countersigns, passwords, or numbers, and trade societies, are excluded from the operation of the Act.

By this Act, which is drawn up with great skill, Benefit Societies are placed on a secure footing, and within proper regulations, thereby affording security to the members, and giving the stamp of legal sanction to the *particular* laws by which they, as members, are governed.

CITY RATES' ACT.

(7 *Victoria*. No. 11.)

By this Act provision was made for the more easy and effectual collection of Rates, authorized to be assessed and levied on the property of the inhabitants of the City of Sydney. Such provision had been found necessary in consequence of the ill-grace with which the citizens generally submitted to the payment of the Rates. The first Assessment had been made at a time when house-rent was extravagantly high, and the Rates, though only four-pence in the pound, amounted to a heavy sum, which was by many persons felt to be oppressive. In many cases, payment was absolutely refused, and the Collectors had the greatest difficulty in executing their office.* By this Act,

* By the new assessment, the grievance has been very

they were authorized to levy, in seven days after the proper notice had been served on the occupier of any premises liable to pay Rates, upon any property found on the premises. The occupier of the premises was declared to be primarily liable, but if he should pay any amount of assessment extending over a period of time during which he had not been in possession as tenant, he was to be entitled to deduct the amount so paid from any rent then due, or which might accrue in future, or to recover the same in any court of competent jurisdiction.

SHERIFF ACT.

(7 *Victoria*. No. 13.)

Several important regulations respecting the Appointment and Duties of Sheriff in New South Wales were introduced by this Act. The Charter of Justice for the Colony had appointed, that the Sheriff, after being nominated by the Governor, should hold office for one year. It was now enacted, that the person appointed to this office, by the Governor, should hold office during pleasure. A provision was also inserted requiring the Sheriff to find due security by his own recognizances and those of others for the execution of his office, and for the payment over by him to the Colonial

much lessened, house property having fallen in value more than one half.

Treasurer of such sums as may come into his hands as Sheriff. The immediate occasion of this Act being introduced, was the melancholy suicide of Mr. Sheriff Macquoid, who, besides being in very embarrassed circumstances, had in his hands the sum of £2,792. 9s. 3*d.*, the property of suitors in the Court, being moneys levied in pursuance of Writs directed to him by the Judges, in addition to a sum of £951. 7s. 4*d.* due to the government. The government, of course, had a preferable claim; but the unfortunate suitors in the Court were not considered to be entitled to any redress. The provisions of the Act now under consideration were intended to prevent the recurrence of similar inconvenience in future, and otherwise to lessen the risks and responsibilities to which the person holding the office of Sheriff was then exposed.

LUNATICS' ACT.

(7 *Victoria*. No. 14.)

This was an Act to make provision for the safe custody of, and prevention of offences by, persons dangerously insane, and for the care and maintenance of persons of unsound mind. By the Act, any Justice of the Peace is authorized, on the evidence of any two legally qualified medical practitioners, and any other proof which may be satisfactory to the said Justice, to commit to

safe custody, any dangerous idiots or lunatics, until discharged by warrant of two Justices, or of one of the Judges of the Supreme Court, or by order of the Governor for his or her removal to some Colonial Lunatic Asylum. In case of crime committed by any person, on whose behalf a plea of insanity is set up, the jury are specially required to find, whether the prisoner was actually under the influence of insanity at the time of his commission of the crime, and if they find in the affirmative, the prisoner is to be kept in strict custody till the Governor's pleasure shall be known; and the Governor is empowered to provide for the future safe custody of the prisoner at his discretion.

RESERVED ACTS.

Two Acts, which passed the Legislative Council during the Session of 1843, were reserved by the Governor for the signification thereon of her Majesty's pleasure. The first of these was an Act to enable the members of "The Sydney Dispensary" to sue and be sued in the name of the Treasurer for the time being. The Sydney Dispensary is one of the most valuable institutions in the colony, and though supported by private subscription, may be justly considered as a public good. With this view, a clause was inserted, declaring that the Act should be a Public Act.

Whether his Excellency thought the principle of incorporating societies supported by private subscriptions objectionable, or whether he objected to the clause which declares the Act to be a public one, does not appear.

Another Act reserved by his Excellency was the Tariff Act, which, as it altered and affected the duties of Customs, &c., fell under the provision of the 31st Clause of the Act of Parliament, (5 & 6 Vict. c. 76), which expressly enacts, that all such Bills must be reserved for her Majesty's pleasure. The object of the Bill was to substitute for the *ad valorem* duty at present chargeable on certain goods imported into this colony, a fixed duty according to the following scale, without distinction as to the place from which the article is imported:—

	<i>s</i>	<i>d</i>
Flour or meal, per cwt.	2	6
Wheat, per bushel	1	0
Other grain, ditto	0	4
Sugar, raw, or molasses, per lb.	0	0 $\frac{1}{4}$
Sugar, refined ditto	0	0 $\frac{3}{4}$
Wine, per gal.	1	0
Coffee, per lb.	0	0 $\frac{1}{2}$
Tea, ditto	0	1

It was also proposed that the duties on spirits distilled within the colony should be reduced one half. His Excellency, however, not only objected to fixing an import duty on flour and grain, but to the system of fixed duties on corn alto-

gether, and consequently appended to the Act the following minute :—

“ In conformity with the express provisions of the 31st Clause of the Act for the Government of New South Wales (5 & 6 Vict., c. 76), I reserve this Bill for the signification thereon of her Majesty’s pleasure, and I shall submit to her Majesty’s principal Secretary of State for the Colonies, the reasons why I humbly recommend that it should not pass into a law.

“ GEORGE GIPPS,
“ Governor.”

On the 28th of December, his Excellency prorogued the Council, after a brief but laborious Session of five months. In his speech, his Excellency again referred to the state of the colony, and repeated his conviction, “ that the colony cannot, by any legislative enactment, be relieved from the depression under which it labours, and that it is only by the general tendency of their measures, that the legislative and executive authorities can aid individuals in the efforts which are necessary for the recovery of their affairs.”

“ And however great,” continued his Excellency, “ may be the difficulties of individuals, it is consolatory to reflect that the real sources of wealth and prosperity remain unimpaired in the colony : our great staple commodity still commands

a renumerating price, and so long as it continues to do so, industry and frugality will not, under the protection of wise laws, and the blessing of Providence, fail of their reward.”

His Excellency, having thanked the Council for the supplies which they had granted to her Majesty, declared the Council prorogued till the 6th of February next.

EXTRAORDINARY SESSION 1844.

An extraordinary Session of Council was held in the month of March, 1844, in pursuance of proclamation by the Governor. The object for which the Council was summoned at this time, will be best seen from the message sent by his Excellency, which is extracted from the Minutes of the Council.

“Message from his Excellency, the Governor, to the Members of the Legislative Council, stating to them the reason why he has called an extraordinary Meeting of the Council.

“Gentlemen,

“I have called you together at this unusual season of the year solely for the purpose of laying before you a project of a law, to protect certain magistrates of the territory from the prosecutions to which they have become liable by a recent

judgment of the Supreme Court, wherein it was declared that their jurisdiction within the county of Cumberland was terminated on the 2nd of January, 1843, by a commission which issued for the purpose of carrying out the provisions of the 63 and 64 sections of the Sydney Corporation Act, (6 Vict. No. 3).

“As it is not imputed to the magistrates, either that they acted intentionally wrong, or that they have done injustice to any one, I trust you will consider them entitled to the indemnity which it is proposed to afford them.

“The project of the Law is herewith transmitted to you, and it extends to magistrates who have acted under similar circumstances in the County of Bourke, and who are exposed to the like consequences.

“GEORGE GIPPS.”

Government House,
5th of March, 1844.

The Bill which accompanied the message was entitled, “A Bill to indemnify certain Justices of the Peace for the territory of New South Wales, and to enable territorial Justices of the Peace to act as such under certain limitations, within the boundaries of the City of Sydney, and town of Melbourne, respectively.”

The City of Sydney and Town of Melbourne having been incorporated by an Act of the late

Council, and possessing magistrates of their own, it became necessary to empower Justices of Peace for the territory to act as such with respect to offences or matters arising without the boundaries of the said city or town, though they might be resident within those boundaries; but they were not to interfere in cases arising within the said city or town respectively.

This Bill of Indemnity, of course, met with no opposition, and passed into a law.

During this extraordinary Session, the Attorney-General also obtained leave to bring in two short Bills; one to limit the right of suing for fines, forfeitures, and penalties, incurred under the Licensed Publicans' Act, to the chief or any other constable; the other, to provide for the summary disposal of suits for fines, &c., under the Distillation Act, and to indemnify Justices who might have acted in a summary way, under misapprehension of the existing law.

Both these Bills were passed, and after a Session of four days, the Council was again prorogued by a Message from his Excellency.

1844.—The Council re-assembled on Tuesday, 28th of May, 1844, pursuant to proclamation of his Excellency, the Governor. During the recess, no less than three of the members of the Port Phillip District had resigned their seats, and in

their room had been elected Sir Thomas Livingstone Mitchell, Surveyor-General of the colony; Adolphus William Young, Esq. Sheriff of New South Wales; and Joseph Phelps Robinson, Esq., which latter gentleman represented the Town of Melbourne.

His Excellency opened the Council in person, and in his speech congratulated the Council on the commencement of their second ordinary Session. He alluded to the considerable addition which had been made to the population, by the arrival of several emigrant ships, and to the gratifying fact, that the immigrants had almost all met with ready engagements. This circumstance had, of course, increased the debt with which the Territorial Revenue was encumbered, but his Excellency was happy to say that the ordinary revenue, though much reduced, had been fully sufficient for the ordinary expenditure of the past year.

SESSION 1844.

RESOLUTIONS.

Prayer, May 29.—Mr. Cowper moved, “That public prayers to Almighty God be offered up daily at the opening of this Council, as soon as the Speaker shall have taken the chair; and that a chaplain, who shall be a clergyman of the Church

of England, be appointed by the Speaker to perform this duty."

It will be recollected, that a motion of similar tendency was made in the Sessions of 1843, by Dr. Lang, and was rejected. Though Mr. Cowper's motion was much simpler, it unhappily met with no better fate, Dr. Lang, Mr. Robinson, and others opposing it on the ground of the chaplaincy being restricted to clergymen of the Church of England, and many members fearing that the service would become a mere form, and thus be rather injurious than otherwise. Thus, from the sectarian spirit of some Honourable Members, and the indifference of others, the Council still remains under the stigma of being the only Legislative Assembly in the world, which, as such, makes no recognition of Divine Providence.

Vacant Seats.—Two rather curious questions arose in the early part of this Session. One of them arose from the resignation of his seat by his Excellency, the Commander of the Forces, Sir Maurice Charles O'Connell. His Excellency the Governor, however, not having replied to the letter of resignation forwarded by his Excellency the Commander of the Forces, the latter, a few days afterwards, again wrote to his Excellency the Governor, intimating his wish to recal his resignation. The question, whether it was competent for a Member of the Council so to do,

was submitted by his Excellency, the Governor, to the Council, agreeably to the provisions of the 18th clause of 5 & 6 Vict. c. 76. The question having been considered in a Committee of the whole House, the Chairman reported the following Resolution:—

“That having considered the circumstances stated in his Excellency’s message, this Committee is of opinion, that the seat of his Excellency the Commander of the Forces, Sir Maurice Charles O’Connell, is *not* vacant.”

Another question, of a more intricate nature, arose from an oversight of his Excellency, the Governor. At the period of the first return of Members of the Council, the Attorney-General was absent from the colony, and in order to make up the complement of official nominees, his Excellency nominated the Colonial Engineer (Colonel Barney). Immediately on the arrival of the Attorney-General, (Mr. Plunkett), Colonel Barney resigned, and the Attorney-General was thereupon appointed to the vacant seat, his Excellency, as well as his legal advisers, having forgotten that by the 19th clause of the Act of Parliament, no person could succeed the Colonial Engineer, but one holding the same office, he having been designated in his nomination as the holder of an office, and not by his proper name.

The mistake was not discovered until the occurrence of the circumstances above-mentioned rela-

tive to the seat of the Commander of the Forces, which rendered a reference to the Act of Parliament necessary. Of course the Attorney-General's appointment became void. On the 13th of June, however, an additional instruction was received from her Majesty, confirming the appointments of the nominees provisionally appointed by the Governor, and enumerating, among others, "the Attorney-General, or, in his absence, the Colonial Engineer." It appeared, therefore, to be her Majesty's pleasure that the Attorney-General should have a seat in the Council, and the Instrument under the Sign Manual seemed to disallow the appointment of the Colonial Engineer, at least during the presence in the colony of the Attorney-General, while at the same time, the Instrument was not valid itself to make a new appointment, which according to the Act, can only be done by Warrant, countersigned by one of his Majestys' principal Secretaries of State. His Excellency, therefore, submitted to the Council, whether, under these circumstances, there was not a vacancy, which might be filled up by an appointment of another officer than the Colonial Engineer.

The legal points involved in the question were argued with great subtilty, and the most learned of the Members appeared puzzled; at length Dr. Lang humorously suggested, that as Honourable Members could not get *through* the hedge,

they should put spurs to their steeds, and *clear it at a bound*. The suggestion was adopted by the House, who were glad to be relieved of the knotty point proposed by his Excellency, and the seat was unanimously declared to be vacant. At the next meeting of Council, the Attorney General took the oath and his seat.

District Councils, July 25.—His Excellency, on the 19th June, had sent a message to the Council, accompanying a Bill to make further provision respecting the Constitution, and to define and extend the powers of District Councils in the Colony of New South Wales. This message was taken into consideration, and the Bill read a first time, on the 25th of July. The Colonial Secretary then moved, that the Bill be printed, and read a second time on Thursday, August 1st. The following amendment, was, however, moved by Mr. Cowper :

“ That, in the opinion of this Council, the District Councils are totally unsuited to the circumstances of the colony, the country districts being unable to meet the additional taxation which would necessarily be required in carrying out the various objects contemplated by their institution ; and the cost of the machinery requisite for bringing them into operation, being of itself an obstacle fatal to their success ; and that, therefore, the second reading of this Bill be postponed to this day six months.”

On the question being put, the amendment was carried by fourteen to seven. The operation of that part of the Act of 5 and 6 Vict. c. 76, which relates to District Councils, is, consequently, for the present suspended.

On Friday, August 9, Mr. Cowper moved the adoption of an address to his Excellency, communicating the above Resolution, and praying his Excellency to make such representations to her Majesty's government as might procure the repeal of the clauses in the Act relative to District Councils, and further requesting his Excellency to place on the Estimates for the year 1845, such sums as might be necessary to make provision, from the general revenue, for such objects as it was intended should have been provided for by the District Councils.

The address was carried by a majority of twenty to eight.

In his reply to the address, his Excellency disclaimed any responsibility, which the infraction of the Constitution might involve, reserving to himself the right of making such alterations in the Estimates, as the altered circumstances in which the government was placed might require.

Estimates for 1845, August 29.—In his Financial Scheme for 1845, his Excellency had inserted an item of £8,635. 5s. 10d. as a supplement to the sum provided, by the schedule marked A, appended to the Imperial Act, for the expenses

of the Administration of Justice.* This day on the motion of the Colonial Treasurer, the Council resolved itself into a Committee of the whole House, for the further consideration of the Estimates, and in Committee adopted the following Resolution :

“ This Council being empowered, under the thirty-fourth Section of the Imperial Act, Chap. 76, to fix the amount to be appropriated to every detail of the Public Service, and being now called upon by his Excellency, the Governor, to vote the sum of £8,635. 5s. 10*d.*, as a supplement to Schedule A, in the Estimates for 1845, is therefore bound, in the exercise of its duty, to fix every detail of such amount previously to its appropriation by the Local Legislature.”

“ But his Excellency, the Governor, having rendered the due performance of this duty impossible, by submitting such supplement in connexion with the said Schedule, the right to fix the details whereof (an indispensable preliminary to any inquiry into the details of the Schedule itself) is denied by the Right Honourable the Secretary of State for the Colonies, in accordance with his Excellency’s message to the Council, of the 19th October,

* The sums on this schedule on account of the administration of justice, amount to £20,000, exclusive of the salaries of the Chief Justice, and the three Puisne Judges, amounting to £6,500.

1843. This Council, therefore, in assertion of this, its undoubted right and duty, declines to enter into any consideration of the required supplement."

The Resolution, on being reported to the Council, was adopted by a majority of fifteen to eleven, and the Resolution was ordered to be communicated to his Excellency, the Governor. His Excellency replied by message that as the Council had declined to grant any sums of money for the administration of justice, in addition to those which had been provided by Parliament, he would take measures for limiting the expenditure of that department of the public service, to the sums specified in the Schedule, and expressed his intention of conferring with the judges on the manner in which that could be done with the least inconvenience to the public. In consequence of this message, Mr. Wentworth, on the 12th of September, moved the adoption of Resolutions, explanatory of the former one, to this effect:

1. "That the aforesaid resolution does not involve, as the said message implies, an absolute and unqualified refusal, to grant any sums of money, for the administration of justice, in addition to those which have been provided for by Parliament, but only a qualified refusal to grant such moneys, so long as the appropriation thereof be withheld, and a sum asked for, from this

Council, (as it was in that instance) in gross instead of detail, for the services enumerated in Schedule A, and the required supplement thereto.

2. " That the casual revenue which has been improperly withheld from the control of this Council, for the first time this year, and which in the abstract of the expenditure for the year 1843, amounted to £6,698. 12s. 6d., arising, as it does, chiefly from fines and penalties levied in courts of justice within the colony, affords an ample and suitable fund, out of which any supposed inadequacy of the provision made by Parliament, in Schedule A, for the administration of justice, may be supplied."

The Resolutions were carried by fifteen to eleven, and a Select Committee was appointed to prepare an Address communicating them to her Majesty.

Representation of Colonial Interests in England, September 18.—Dr. Nicholson moved a series of Resolutions to the effect, that it was highly desirable, that the interests of the colony should be represented in Parliament, and in England, by a gentleman of ability and experience ; that a sum of £500 per annum should be appropriated annually as an acknowledgment of his services ; that the Honourable Francis Scott, M.P. for Roxburgshire, was a fit and proper person for the office ; and, lastly, that an Address should be presented to his Excellency, the Governor, praying him to place on

the Estimates for 1845, the above amount for the service.

His Excellency in reply to the Address, acquainted the Council that he would communicate the Resolutions to her Majesty's government.

Postage, September 18.—A series of Resolutions were again adopted this year by the Council, similar in purport to those adopted in the preceding year. His Excellency, however, could not feel himself justified in bringing forward any measures for the reduction of postage in the present state of the Finances.

Addresses and Petitions from the Council to her Majesty, and both Houses of Parliament.—Several series of Resolutions terminating in an Address to her Majesty, or Petitions to the Imperial Parliament were adopted by the Council. Two Addresses to her Majesty, were occasioned by alleged misrepresentations, on the part of his Excellency, of Resolutions of the Council. One of these has already been mentioned under the head of Estimates for 1845, and the explanatory Resolutions which the Council thought it necessary to pass have been quoted. The other related to the following passage of a Despatch from his Excellency, dated October 28, 1843, which was laid on the Council Table by the Colonial Secretary, on the 16th August.

“I can only reply, that it did not occur to me as possible, that the council would seek to make

her Majesty's government break faith with the servants of the public; and in any thing which did not involve a breach of faith, or greatly impair the efficiency of the Courts of Justice, I was prepared to yield to the wishes of the Council. The Council, however, having arrived at that division of the Estimates which relates to the Judicial Establishment, asserted its right to abolish offices, or reduce salaries, at its pleasure, without entering in any way into the question of compensation to the holders of office, and without reference to any promises given, or expectation held out to them."

The Council considered it necessary to vindicate themselves from these representations, and, accordingly, drew up a long Address, in which they took some pains to show that, so far from not having entered on the question of compensation, an Address had actually been voted to his Excellency, praying him to place on the Estimates, a sum of money to compensate the holders of abolished offices; to which Address, his Excellency returned a negative answer, on the plea, that the abolished offices were chiefly those of Police Magistrates, which were not, in his Excellency's opinion, of a permanent character, or such as entitled the holders of them to compensation on their abolition. The validity of this plea was not acknowledged by the Council, and her Majesty has been further addressed on this subject. The fact, however, is, that a money-vote cannot originate in the Council (vid. 5 and 6 Vict. c. 76,

c. I. 34). The Act expressly provides that all disbursements must be proposed by the Governor. When his Excellency, therefore, represented to Lord Stanley, that the Council had not entertained the question of compensation, he appears to have laboured under a strange misapprehension. With respect to reducing the salaries of the Prothonotary and Master in Equity, to which his Excellency alluded, the Council very clearly showed in their Address, that the sum of £650 had been originally approved by Lord Stanley himself, as the salary of the Prothonotary, who, nevertheless, sent out Mr. Gregory with a stipend of £800. The Council conceived that the sum originally fixed was ample, the duties of the office having been considerably reduced. Mr. Milford, who was sent out with the appointment of Master in Equity, at a salary of £1,000 a year, having been also appointed by the Judges to the office of Curator of Intestate Estates, worth £300 a year, the Council considered that £800, which was the sum originally proposed by Sir George Gipps, after consultation with the Judges, was sufficient for the legitimate duties of the office of Master in Equity. The Addresses to her Majesty were drawn up with great ability, and a loyal tone was observed throughout. They were prepared by a Select Committee, Charles Cowper, Esq., M.C. for Cumberland, in the chair.

The subject of Police and Gaols, was this year brought under the notice of the Council by Mr.

Robinson, who moved the adoption of an Address to her Majesty, setting forth, that the colony was required, by the estimates for 1845, to provide the enormous sum of £85,250. 16s. 8d. for expenses of Police, &c., being at the rate of 10s. 4d. per head for the whole population of the colony; a ratio which, if necessary in the United Kingdom, would require no less a sum total than £14,000,000. The Address went on to show, that the amount of crime among free immigrants and natives of the colony was to that among those who arrived as convicts, in the ration of 1800 to 3900, consequently, that the proportion properly chargeable on the colony was only £26,921. 7s. 2d. By similar reasoning it was shown, that a balance of £655,138. 12s. is due to the colony from the Home Government for the last eight years. An incubus of this sort, Mr. Robinson very ably proved, could not but materially impede the advancement of the colony, and the Address concluded by praying her Majesty to recommend Parliament, that the above balance be repaid to the colony, and that a due proportion of the annual expense of the Police and Gaols be defrayed by the Home Government. It was also suggested, that, in order to counteract the influence of the convict population (59,788 convicts having been transported to the colony), the British Government should send out the like number of free Immigrants, which would operate beneficially on the population of both the two

countries, in one of which upwards of four millions of its people were subsisting in a state of pauperism ; in the other, hundreds of sheep and cattle were daily destroyed for the hides and tallow. By the consumption of taxable commodities occasioned by such an influx of population, the colony would be reimbursed in the sum annually due to it. The Address was referred to the Select Committee then sitting on General grievances, from whose amended Address the above calculations have been taken.

Petitions were sent from the Council to both Houses of Parliament, praying that grain, the produce of the Australian colonies, might be admitted, into the British ports, on the same terms as Canadian corn.

Other petitions were forwarded, founded on the Report of the Select Committee on Crown land grievances, which will come under notice in its proper place.

SESSION 1844.

REPORTS OF SELECT COMMITTEES.

Sixteen Select Committees were appointed during this Session, and their inquiries were directed to some of the most momentous questions relating to the colony. Four of them, however, were appointed merely to prepare petitions or addresses, which have already been noticed. Of the labours of the remaining twelve an account is now offered.

The first in order of time, as well as in importance, was the

1.—CROWN LAND GRIEVANCES' COMMITTEE.

A Select Committee was appointed, on the 30th of May, on the motion of Mr. Cowper, "to enquire into, and report upon, all grievances connected with the lands of the colony, with an instruction to distinguish between the grievances which can be redressed in the colony, and those which cannot." The Committee consisted of seven members, including representatives of all the great interests of the colony. The chairman, Charles Cowper, Esq., is the son of the Rev. Dr. Cowper, the senior Clergyman of the Church of England in the colony, and is the zealous and able friend of the cause of education in the principles of the Established Church. The medical profession was represented by Dr. Nicholson; the legal profession by Messrs. Windeyer and Lowe, the latter of whom was a Crown nominee; the banking and mercantile interests by Mr. Robinson, Manager of the Royal Bank, who, being a member of the Society of Friends, represented, in some sense, also the Dissenting bodies. The pastoral and agricultural interests were represented by Major Wentworth and Mr. Bradley, both extensive land and stock proprietors, as, indeed, are almost all the gentlemen who sat on this important Committee. More than

ordinary significance, therefore, attaches to their declaration, which precedes the Report, that they “have unanimously agreed to it.” Twenty-six of the principal land and stock-holders were examined as witnesses before the Committee; and, in addition to this, a circular letter, containing queries relative to the subjects on which the Committee had been instructed to report, was addressed to every magistrate of the territory, to which no less than one hundred and twenty-two replies were received, almost without exception confirmatory of the conclusions drawn by the Committee. The questions involved, are, indeed, vital, and demanded the fullest investigation—the entire prosperity of the colony hinges on the determination which her Majesty’s Government may form on these questions. It will, therefore, be necessary to examine the Report of this Committee with some minuteness, in addition to the historical details already given on the subject of the “Occupation and Sale of Crown lands.”

The various matters reported on by the Committee are by them divided under eleven different heads,* viz:—

* It may be proper to give in the form of notes, copies of the “Depasturing Regulations,” and of the “Recommendations” transmitted by his Excellency, the Governor, to the Home Government with his despatches on the subject of the Regulations. A copy is also subjoined of the circular letter addressed by the Committee to the Magistrates of the territory.

1. The Minimum Price of Land.
 2. The Depasturing Regulations.
-

NO. I.—PROCLAMATION BY HIS EXCELLENCY THE
GOVERNOR.

DEPASTURING LICENSES.

From the Government Gazette of April 2, 1844.

With reference to the Regulations of the 21st of May, 1839, and 14th of September, 1840, relative to the occupation of the Crown lands beyond the boundaries of location, his Excellency, the Governor, in consequence of the practice which has grown up of parties occupying several distinct stations under one license, has been pleased, with the advice of the Executive Council, to direct, that parties occupying stations in separate districts, notwithstanding that the same may be contiguous, shall be required in future to take out a separate license for each such district, and to pay the established fee of ten pounds for the same; and that no person shall in future be allowed to take up a new station, either in the same district in which his stock may be depastured, or in any other, without having first obtained a separate license for the same, under the recommendation of the Commissioner, and paid the fee of ten pounds thereon.

2. His Excellency, with the advice of the Executive Council, has further directed, that from and after the 1st day of July, 1845, a separate license must be taken out, and the fee of ten pounds paid thereon, for each separate station or run occupied, even though situate in the same district.

3. No one station, within the meaning of these Regulations, is, after the 1st day of July, 1845, to consist of more than twenty square miles of area, unless it be certified by the Commissioner that more is required for the

3. Commissioners of Crown Lands within the Boundaries.

quantity of sheep or cattle mentioned in the next paragraph.

4. If the party desire to occupy more, and the Commissioners consider him entitled to such occupation, with reference to the quantity of stock possessed by him, or its probable increase in the ensuing three years, as well as the accommodation required by other parties, and the general interests of the public, an additional licence must be taken out and paid for.

5. Every station at a greater distance than seven miles from any other occupied by the same party, will be deemed a separate station within the meaning of these Regulations, even though the area occupied may not altogether exceed twenty square miles; and no one licence will cover a station capable of depasturing more than 4000 sheep, or 500 head of cattle, or a mixed herd of sheep and cattle, equal to either 500 head of cattle, or 4000 sheep.

6. No station, or part of a station, previously occupied under a separate license, will be incorporated with, or added to the station of any licensed person, unless he pay for it the price of another license.

7. In other respects, the Regulations referred to will remain in force.

By his Excellency's command,

E. DEAS THOMSON.

NO. II.—RECOMMENDATIONS.

Transmitted by his Excellency, the Governor, with his despatches on the subject of the Depasturing Regulations as published in the "Sydney Morning Herald" of the 13th of May, 1844.

1. Every squatter, after an occupation of five years, shall

4. Commissioners of Crown Lands without the Boundaries.

have an opportunity afforded to him of purchasing a portion of his run, of not less than 320 acres, for a homestead.

2. The value of any permanent and useful improvements which he may have made on the land, shall be allowed to him; but the land itself—exclusive of improvements—cannot be sold for less than the established minimum price of £1 per acre.

3. Any person who may have purchased a homestead shall not be disturbed in the possession of his run during the following eight years. He must, however, continue to take out for the unpurchased parts of it, the usual license, and pay on it the usual fee of £10 per annum.

4. A second purchase of not less than 320 acres shall be attended with the similar advantage of being undisturbed for the next eight years; so that each successive purchase of 320 acres will act virtually as a renewal of an eight years' lease.

5. The right of the Crown must, however, remain absolute, as it at present is, over all lands which have not been sold or granted, it being well understood, that the Crown will not act capriciously or unequally, and will not depart from established practice, except for the attainment of some public benefit.

6. Persons who may not avail themselves within a certain period, to be hereafter fixed, of the advantage offered to them of purchasing a homestead, will be exposed to the danger of having any part of their run offered for sale, either at the pleasure of the Crown, or on the demand of an individual. The value of any useful and permanent improvements which they may have made on their lands, will be secured to them, should a stranger become the purchaser.

[7. The

5. Crown Lands Occupation Act.

6. Border Police.

7. The person, whoever he may be, who purchases the homestead, is to have the remainder of the run.

8. All sales to be as at present by auction—the appraised value of permanent improvements—which will be considered as the property of the former occupant—being added to the upset price of the land.

9. As stated in the notice of the 2nd of April, a license is not to cover more than 12,800 acres of land, unless it be certified by the Commissioner that the 12,800 acres are not sufficient to keep in ordinary seasons 4000 sheep. No existing run is, however, to be reduced below 12,800, on account of its being capable of feeding more than 4000 sheep. But, if any licensed person have on his run more than 4000 sheep, he is to pay £1 for every 1000 above 4000. A person, therefore, having on a run of twenty square miles, 5000 sheep, will not, as has been supposed, be required to take out two licenses; but will be charged an extra £1 for his license, or £11 instead of £10. If he have 8000 sheep, he will be charged £4 extra, or £14 in all. This is not stated in the notice of the 2nd of April, but it forms a part of the proposals which were sent home, as before referred to.

NO. III.—CIRCULAR.

Legislative Council Chamber,
Sydney, June 4, 1844

Sir,

I have the honour to request that you will be pleased to favour the Committee now sitting to investigate the grievances connected with the Lands of the Colony, with your reply to the following queries. The Committee will feel obliged by your returning an answer at your earliest

7. Native Police.

8. The influence exercised by the present De-

convenience, addressed to the Chairman of the Committee, Council Chamber, under cover to the Clerk of the Legislative Council.

I have the honour to be, &c.

WM. MACPHERSON,

Clerk of the Legislative Council.

To

QUERIES.

1. What is your opinion as to the expediency of raising the minimum price of Crown lands to £1 per acre?

2. What is your opinion of the Government Regulations of the 3rd of April last, in reference to Depasturing Licenses, and what effect do you think they are likely to have upon the prosperity of the colony?

3. Will you state your opinion as to the nature and exercise of powers vested in the Commissioners of Crown lands, both within, and beyond the boundaries of location?

4. Will you state your opinion as to the efficiency of the Border and Native Police?

5. What is your opinion of the influence exercised by the present Depasturing Licensing System upon the general improvement of the colony, and the social and moral condition of its inhabitants?

6. What is your opinion as to the effect of the government enforcing the payment of large arrears of Quit-rents?

7. If you should be of opinion that grievances exist on any of the subjects above-mentioned, can you offer any suggestions for their remedy?

8. Do you consider that a right of pre-emption should be given to the squatters?

pasturing System upon the general improvement of the colony, and the social and moral condition of its inhabitants.

9. Quit-rents, and arrears of quit-rents.

10. Of Mineral Reservations in Grants.

11. The Compact.

To each of these points the Committee gave a most careful consideration ; and their Report is one of the most able documents, perhaps, ever prepared in the colony :—

1. *Minimum Price of Land*.—Referring to the Report of the Select Committee on Crown land sales of the preceding year, the Committee, nevertheless, considered it proper to call further evidence on this important subject, and were led to the conclusion, that the present high upset price of land is “ one of the main grievances under which the colony is suffering.” The evidence was almost entirely to the same effect. The following short abstract of it, is taken from the Report :—

“ Captain King, R.N., and Commissioner for the Australian Agricultural Company, says :—‘ it has entirely put a stop to the sale of Crown lands in this colony.’

“ Mr. Boyd is of opinion, ‘ that the measure was fraught with the most injurious consequences to the colony, and that the spirit for emigration, and desire to invest money in this colony, then (when he left England) existing at home, were to a very

great degree checked, by the alteration in the price of land.'

"Mr. Kemble believes it 'to be most prejudicial to the colony, as necessarily separating agricultural from pastoral pursuits, and thereby keeping agricultural operations upon a very low scale, the manure from stock farming being essential to their success.' He asserts of his own knowledge, 'that it deters, to a great extent, emigration to this colony of the highest classes of persons; that they are aware, from the concurring testimony of all persons who have transmitted their opinions from this colony, of the impossibility of making any profit, especially in pastoral pursuits, upon land so purchased; and that the chance of gain from leases for such terms as are usually granted, even if beneficial, which implies profitable occupations, has not been, and will not be, sufficient inducement to such persons to come hither.'

"Captain O'Connell states, 'it has driven the largest class of purchasers totally out of the land market, and has naturally decreased the land revenue, thereby preventing the occupation of the soil by proprietors; it has naturally created, or would naturally create, if continued, the occupation by those who have no vested interest in the land; and that also is a system which cannot but be prejudicial to the interests of the community.'

"Mr. Donaldson asserts, that it is 'most absurd;' 'has most decidedly an injurious effect;'

and, as this gentleman has just returned from England, the Committee made a point of inquiring whether he could state from personal knowledge, what had been the effect produced by raising the minimum price upon the minds of those who desire to emigrate to this colony? His answer is:— ‘to those who asked me, I expressed my opinion that it was decidedly too high a price for them to buy land at, with any probability of profit, and I found that they had received the same opinion from many others who were acquainted with the colony.’

“ *Question 5.*—‘ Did that appear to damp their views as to looking forward to this colony as a field for emigration?’ — ‘ Yes ; all the persons with whom I have conversed in England, with the exception of gentlemen connected with the public offices, have thought badly of raising the price of land.’

“ Mr. O. Bloxsome, Manager of the British and Colonial Loan Company, says, ‘ I consider no more effectual means could have been devised by the government for the stopping the sale of land altogether ; I think also that it has had the effect in England of preventing emigration to this colony of a class of persons whom it would have been most desirable to have had here ; namely, small farmers with capital ; these persons naturally argue, Why should I go out to Australia, a distance of sixteen thousand miles, and pay £1. an acre for my land,

when by emigrating to Canada I can obtain it for a dollar?' ”

It is a fact not undeserving of attention, that even Mr. Wakefield, to whom the advocates of the concentration principle of colonization, and of high minimum price, look as to an oracle, has himself admitted the inapplicability of these principles to Australia. He declares expressly, that, to colonize on that system is impossible in “such a country as Australia, where the main employment of capital is sheep-farming, and where, in some districts, several acres are required to feed a sheep.” But the most remarkable of Mr. Wakefield’s admissions, is as follows :—“The statement,” he observes, “has to be made, that nobody has ever proposed to put a price on the use of natural pasturage; that might be granted for nothing, as all land used to be, but in strict proportion to the stock kept by the grantee, and on condition, that, whenever any body wanted to buy any of it, that portion should be resumed by the government for sale, without even a tendency to defeat the object of insisting on a price for every acre required as a permanent property.”

In this opinion of Mr. Wakefield, Lord Glenelg did not appear to coincide, when he declared, in a despatch to Sir George Gipps, of the 9th of August, 1838, “that the interests of the colony required that a considerably higher price (than 5s. an acre) should be affixed to land.” Experience,

however, must by this time have fully satisfied the Home Government of the impolicy of the course they have pursued. The matter appears perfectly simple to the Australian grazier, who does not trouble himself with theories. He knows that it can never pay him to purchase land at 20s. an acre; for, to take the case in most favourable circumstances, there is no natural pasturage, of which less than *three* acres will suffice to support a single sheep; and the highest profit which has been mentioned as derivable from grazing pursuits is 2s. per annum per sheep; now 2s., as the interest on three pounds, is any thing but a fair profit, where money easily produces from six to ten per cent., without the personal labour of the capitalist. But the case appears much worse, when it is considered that in many districts *twelve*, and in some even *twenty or more* acres are required to support a single sheep, and where the profit, with the utmost economy, cannot be made to exceed 1s. 4d., or 1s. 6d. Yet if a man wished to purchase this land, he must pay 20s. for every acre of it. Why, twenty farthings would be nearer the value of it.

The Act of Parliament (5 and 6 Vict., c. 36,) which introduced this system, appears to act in a ten-fold degree injuriously, when the difference which it establishes between this colony and other British colonies is considered. The extensive agricultural lands of British North America can be purchased at prices varying from 1s. 9d. to 6s. 7d.

per acre, with the single exception of the little colony of Prince Edward's Island, where only about eight thousand four hundred acres of Crown land remain unalienated, and where the price is from 10s. to 14s. of their currency, or something less in sterling money. At the Cape of Good Hope, a colony only half way between England and Australia, better land is sold at a much lower price. On the subject of the Cape of Good Hope, the Committee examined Joseph Phelps Robinson, Esq., M.C., Manager of the Royal Bank of Australia, whose evidence showed very clearly the disadvantageous position which the colony is forced to occupy with reference to the purchase of land.

"I was very desirous," observes Mr. Robinson, "to ascertain what quantity of land (at the Cape of Good Hope) it took to feed a sheep, and as none of the farms were fully stocked, I found some difficulty in it; but upon one estate within a few miles of Port Elizabeth, I discovered that six thousand acres supported six thousand sheep, and a herd of three or four hundred cattle; so that I think, on an average, grazing land there will feed one sheep to one acre. There were a number of farms sold about the time I was there, and they varied from 9*d.* to 5*s.* an acre, according to the improvements which had been made upon them; great advantages are given there by the land-owners to the settlers; I have heard of land sold in the Cradock district at about 2*s.* 6*d.*

an acre, the purchaser paying interest, or rent, at the rate of six per cent."

"Did you turn your attention to the subject of the price of labour?"

"In consequence of the Caffre war in 1834, a tribe of blacks called Fingoes were declared free by the British government, and came into the Cape Colony for protection — they amount to about twenty thousand. These Fingoes are excellent shepherds; and a man with his family will manage eight hundred sheep for about £10 a year, including rations and all expense."

"Is the country where these lands are situated accessible? Has it many natural advantages?"

"The principal grazing district for sheep is Albany, and the expense of carriage from Port Elizabeth to Graham's Town, a distance of one hundred and six miles, is from 2s. 4d. to 3s. per cwt."

"What is your opinion as to the comparative advantage of settling on the land, and squatting in New South Wales?"

"I think settling in the eastern provinces of the Cape of Good Hope is far better than squatting in New South Wales."

"Will you also state to the Committee what is the average value of land here?"

"I think one acre of land at the Cape of Good Hope is worth three acres in New South Wales, for grazing purposes; and if land can be bought

at the Cape for 9*d.* an acre, I do not consider land here worth more than 3*d.*, that is, taking the whole block."

"Have you any information in respect to any sales of wool that took place at the Cape during your stay there?"

"Prime wool was selling in Graham's Town, in April, 1842, at 1*s.* 4*d.* a pound; and a friend of mine, who was a wool-grower, as well as a merchant, credited his farm for wool sent down from it at 1*s.* 5*d.* a pound."

It is impossible to consider facts such as those mentioned in Mr. Robinson's evidence, without being convinced, that New South Wales has suffered great injustice. The principle of a high minimum price might possibly answer in a country where capital and labour were to be applied to a small extent of ground; but in a colony like this, where both capital and labour must necessarily be spread over a large surface, the idea is preposterous. "The effect," the Report truly observes, "has been to injure England, by stopping the tide of emigration, and Australia, by preventing its boundless territory from being applied to the uses of civilized man."

2. *The Depasturing Regulations.*—The origin of the present Depasturing System has been fully traced in the second section of this chapter. On reference to that account, the reader will perceive, that Sir

Richard Bourke did not attempt to impose any restriction on the then most disorderly system of squatting, without first obtaining a legislative enactment. To such an enactment, the Legislature cheerfully acceded, justly estimating the regularity and respectability which the possession of a License would secure. His present Excellency, however, by advice of the Executive Council, issued, on the 2nd of April, 1844, the Regulations which will be found in the form of a note, a few pages back.

The right assumed by his Excellency, of raising a revenue from the Crown lands without the intervention of the Legislature, is questioned by the Committee, as not being in accordance with the law of England. The only lands for which, in the opinion of the Committee, the Crown is entitled to exact rent, are "the domain lands of the Crown, the private estate of the Sovereign, the portion allotted to him in the original partition among the conquerors." But the waste lands of a newly-discovered country can scarcely be placed on the same footing as a royal park.

The legal argument is so concisely and skilfully stated in the Report, that it may be extracted:—

"But even granting this assumption, (viz.: that the waste lands of Australia are domain lands of the Crown), to be correct, the consequences which flow from it are far different from those which are sought to be drawn. Her Majesty has,

indeed, an undoubted right to collect the rents and profits of her domain lands, *but only for the benefit of the consolidated fund*. These hereditary revenues of the Crown were solemnly surrendered during the life of her Majesty to the consolidated fund in consideration of a Civil List of £385,000, by the statute 1 Victoria, chapter 2, section 2. The inevitable inference is, that the ordinance of the Local Legislature, (2 Victoria, No. 27,) applying the sums paid for the use of these lands to the purposes of mutual security and protection, and assisting the Colonial Government, in raising rents from these lands to be applied otherwise than to the consolidated fund, is void to all intents and purposes. Your Committee do not put this forth as their own opinion, but as a conclusion to which those must inevitably be driven, who maintain that the waste lands of this colony are the domain lands of the Crown. So far from admitting this view to be correct, your Committee consider, that it is only by the fiction of the ancient feudal law, that these can be said to be lands of the Crown at all. By reference to the second volume of Blackstone's Commentaries, Chapter iv, it will be seen, that there never was a time at which the Sovereign could be said to be the proprietor of the whole, or of any large part, of the kingdom; that the notion, that all property in land is derived from the King, was a *mere fiction* of the Norman lawyers, not

introduced immediately after the Battle of Hastings, but in the nineteenth year of the Conqueror's reign, under the apprehension of a Danish invasion; and that whatever oppression the Conqueror and his immediate successors may have found excuse for under this fiction, it never was acquiesced in as anything more than a fiction by the English nation.

“Your Committee would suggest that this reasoning applies with still greater force to the use of natural herbage, than it does to the ownership of land. By the ancient law, every owner of land was allowed to feed his cattle on the Lord's waste; and the analogy of law would seem to imply, that these waste lands stand to the settled parts of the colony in the relation of a vast common, to which, until it be appropriated, all her Majesty's subjects have, of common right, free access, subject only to such regulations as are necessary to preserve peace and order.

“Thus, her Majesty has, as an ancient flower of her prerogative, the ownership of the seas surrounding Great Britain, and of the soil over which they flow, and dominion over them. But, nevertheless, all her Majesty's subjects have, of common right, the same liberty of fishing in those seas, as her Majesty herself. This, your Committee would submit, is the nearest parallel that the ancient law of England affords to the case of the waste lands of this colony. The legal argument thus resolves

itself into this dilemma: if these waste lands be domain lands of the Crown, the proceeds of licenses ought to be carried to the account of the consolidated fund; if they are held in any other right, it can only be by the fiction of the feudal law, and such a fiction can never legally be made the ground-work of taxation."

It seems unnecessary to add a single word to this very lucid reasoning. It is worth notice, however, that his Excellency, in his Financial Minute of July 18, 1844, stated that the license fees were not taken under the Squatting Act, (in which there is, in truth, no authority for the exaction), but are part of the revenues of the Crown; thereby tacitly admitting, the arbitrary and unauthorized character of the impost. The license-fee, from the first, was never intended as a payment for the use of the land, but merely as a certificate of character, and a recognition of the right of government to resume the occupation of the land. The language of the Report may now again be used:—

"With reference to the Regulations themselves, your Committee would beg leave to remark, that they pre-suppose a survey, which it is impossible can be effected for many years, (even were the Surveyor-General's department in effective operation); and that were this difficulty removed, the number of acres affords no guide to the value of the tract of land occupied by any person.

“ Some parts of the colony are mere deserts, no number of acres of which will feed a sheep; in others this may be done with little more than a single acre; in others, the stations cannot be occupied more than a few months at a time, from want of water.

“ The only practical principle of defining stations is the adherence to natural boundaries, such as the course of streams, the summits of mountains, or any marked change in the character of the vegetation; and the only intelligible measure of the value of the station, when so defined, is the quantity of stock which it is able to support in an average season. Tried by these tests, which are no speculative opinions, but which have been confirmed by nearly every witness examined before your Committee, and by the general tenor of the correspondence of the Commissioners of Crown lands with the Colonial Secretary, the Regulations of the 2d April must be pronounced not only oppressive in their details, but absolutely impracticable in their original conception.

“ Your Committee are of opinion, that the ‘ Recommendations’ of the 3rd April are an improvement upon the Regulations of the second, inasmuch as an admission is made in favour of something approaching to a more permanent occupation, and of the right to compensation for improvements; there is, however, nothing to prevent the grazier from being ejected from his

run, immediately after he has purchased a home-
stead, solely with the view of securing it; for by
the fifth clause it is provided, that 'the right of
the Crown must remain absolute, as it at present
is, over all lands which have not been sold or
granted; it being well understood, that the Crown
will not act capriciously or unequally, and will not
depart from established practice, except for the
attainment of some public benefit.'

"There is, indeed, something so complicated
and contradictory, and withal so delusive, in
reference to the price per acre to be paid for the
land, that no regulations, which may be based
upon them, can give satisfaction."

3, 4. *Commissioners of Crown Lands within
and without the Boundaries.* — The arbitrary
power given to the Commissioners of Crown
lands within, but more especially without, the
boundaries, is a cause of indignant complaint.
Within the boundaries, the Officers of the Sur-
veyor-General's Department had been reduced to
salaries, equal only to one-third of their former
amount, with an allowance for their work actually
done, according to a certain scale fixed by the
Governor. These officers were also instructed to
act as Commissioners of Crown lands, and in that
capacity to watch over the unauthorized occupiers
of Crown lands, being promised at least 25 per
cent. upon any increase, made in consequence of
their exertions, in the revenue derived from leases

and licenses to occupy Crown lands within the boundaries. But if the powers of Commissioners, within the boundaries, be vexatious, the case is ten times worse without; those powers, which are already arbitrary and unconstitutional in the highest degree, are amplified by the regulations of April 2, 1844, which, if not previously checked by instructions from the Colonial Department, will come into operation on the 1st July, 1845. The Committee well observe, "that there is no functionary in her Majesty's Dominions, to whom is entrusted such absolute power over the property of his fellow subjects; the loss of a license is in most cases absolute ruin; and yet how lightly this may be, and is, taken away, is shown by the evidence. . . ." "The vesting of absolute power over the property of others in any single person is a principle as unknown to the British Constitution, as the claim to derive a revenue from the waste lands of the Crown; and your Committee have become convinced of the evil working of this power by observing, that every witness, while he censured the Commissioners as a body, was earnest and eager to except the Commissioner of his own District."

5. *Crown Lands' Occupation Act*.—The Committee recommend the immediate repeal of this Act, on the ground that it was obtained under the distinct understanding that the license-fee, and assessment, should both be applied to the purposes

of mutual protection and security. The Crown, however, appears now to set up a distinction between the license-fees and assessment on stock; the former being apparently claimed as payment for the use of waste land, which it clearly was never intended to be, and the latter only being employed to defray the expenses of protection.

6, 7. *Border and Native Police.*—The Committee object, and on satisfactory grounds, to the employment of convicts as a mounted constabulary, which, though it might formerly have been justified by the necessity of the case, is now no longer required. From the evidence of the Commandant of the mounted Police, it appears that there would be no difficulty in obtaining a supply of regular soldiers for the extension of the mounted Police, a force whose effectiveness has so often been the subject of commendation. The border Police, employed without the boundaries, seems utterly useless, and even worse; while the native Police, though it appears, from the evidence of the Colonial Secretary, that they have been found useful in the District of Port Phillip, seem hardly capable of being brought to act efficiently as an independent corps, though they may perhaps be employed advantageously in connection with a corps of European Police.

8. *Moral and Social Influence of the present Depasturing System.*—To this branch of the subject, the Committee devoted much earnest

attention. The moral evil complained of is thus stated :—

“ The uncertainty of tenure under a yearly license, subject to withdrawal at the will of the Executive, upon a mere report or recommendation of a Commissioner, or even by one Justice of the Peace, prevents the establishment of any means for religious instruction or education, and such a state of things must have an effect which it is fearful to contemplate.”

And further :—

“ Your Committee cannot but feel that great injustice has been done to this body of Colonists by excluding them from a participation in the means of obtaining the ordinances of religion ; notwithstanding the scattered state of the population, the visits of an itinerating clergyman would have a beneficial effect. In a charge recently delivered to his clergy, his Lordship (the Bishop of Australia) expresses his opinion, that unless by the influence of the government, or by a combination of the parties concerned, or by both united, some decided steps be taken for the propagation of the Gospel in the more remote parts of the colony, barbarism and unbelief, according to the reports which his Lordship receives, and from what he has himself witnessed, will assuredly grow up, and gain the ascendancy in those neglected portions of the territory of a Christian Sovereign.”

With reference to the political and social cha-

racter of the system, the following passage is also extracted from the Report:—

“The possession of property, unconnected with its rights and duties, must exercise a most pernicious effect upon the community in its political relations. Persons whose means of subsistence depend upon the will of the Executive, cannot safely be entrusted with the elective franchise; and, as it cannot be expected that the residents within the boundaries will always continue to be the largest holders of stock beyond them, this absence of political privileges seems likely, at no distant time, to raise up two distinct and hostile classes, the one possessing more and the other less than their due weight upon the Councils of the colony.

“The social evils of the system are equally apparent; the possession of property, without its rights and duties, is not more anomalous than the separation of an Englishman from the cares and comforts of the domestic circle. Your Committee are of opinion, that, great as are the advantages in an economical view of fixity of tenure, its power to counteract this enormous social evil is its greatest recommendation. Let the painful feeling of uncertainty be once removed, and the disproportion between the sexes existing beyond the boundaries of location will be gradually, but surely, remedied; and those who have been not inaptly compared to the wandering Arabs of the desert, would throw off their restless and migratory habits, and become

alive to the pleasures and awake to the duties of civilized life.*

* The following extracts from the evidence give an awful, but not exaggerated, picture of the state of religious and moral feeling beyond the boundaries of location :—

“What is your opinion of the influence exercised by the present Licensing System upon the general improvement of the colony, and the social and moral condition of its inhabitants?”—“In my examination last year before the Immigration Committee, I stated, that the expense of sending supplies into the interior was so great, as to prevent the employment of married people, and that, in consequence, we were forced to employ single men. The result of this, I need scarcely say, is, that the standard of morality is lamentably low ; that frequent conflicts arise betwixt the natives and the shepherds, from disputes respecting their *gins* (native black women) ; and that the men are but too glad to seize an opportunity of neglecting their work, and spending their time and wages at the nearest public-house, or wherever grog is to be had. This order of things, I am convinced, must necessarily continue so long as the squatter holds his station upon the present precarious tenure ; but were we to have fixity of tenure, and leases for, at least, twenty-one years, I am satisfied that few squatters would have an unmarried man in their employment ; they would then have some inducement to improve their station, and make them comfortable homes, and to draw around them a well-conducted and respectable peasantry.”—*Evidence of Benjamin Boyd, Esq.*

“What is your opinion of the influence, &c. ?”—“There can be no question that the present system has been productive of very great evil, and whilst no fixity of tenure is given, and no inducement held out by the government for persons to live at their stations beyond the boundaries, the evil will continue ; at the present time, very few will be

“The evidence taken before your Committee establishes the fact, that that which limits the pro-

found taking their wives and families into the interior, and subjecting them to the numerous inconveniences attendant upon a bush life, so far removed from all civilized society; and, in fact, scarcely any but young unmarried men, persons who are capable of enduring great bodily fatigue, and who are regardless of those little comforts and luxuries which are indispensable to persons further advanced in life, ever think of becoming squatters; you scarcely ever find an elderly person setting himself down in the bush; then the total disregard of the Sabbath is notorious; I have known an instance where the overseer has called to men on the station, to know whether the day was Friday or Sunday! This state of things could not exist, if the regulations regarding squatters were such as would allow of families living beyond the boundaries.”—*Evidence of O. Bloxsome, Esq.*

“What is your opinion, &c.?”—“There can be no doubt that men who possess no vested interest in the soil are not likely to make permanent improvements, so as to draw about them all the comforts and acquirements of civilized life; and that the interests of religion and morality have suffered very much by the present system is, I think, also apparent; it is a common and frequent saying that beyond the boundaries there is no Sunday!”

By the Chairman.—“If an itinerating clergy were established in the interior, do you think there would be any difficulty in the shepherds attending Divine service in the evening, or even in the morning, before they go out with their flocks?”—“I think it would require peculiarly zealous and active clergymen, a description of men very difficult to get.”

“But do you think the masters of establishments would make difficulties themselves, or the men be unwilling to

fitable occupation of waste lands, is the want of surface water. In a climate like that of Australia, where more rain falls than in England, it would be easy to obviate this deficiency by the construction of wells, reservoirs, and tanks ; but this will never be done so long as the occupant feels that the results of his labours are not only not secured to him, but are likely to tempt others, by every means in their power, to disturb his possession.

“ The same observation applies with equal force to any permanent improvements, and, so long as the present feeling of uncertainty exists, the evils of dispersion will thus be aggravated, and the resources of the country left undeveloped.”

9. *Quit-rents, and arrears of Quit-rents.*—It has been formerly explained, that under a regulation introduced by Sir Thomas Brisbane, parties in some instances obtained free grants of land (or, which is the same thing, remission of the purchase-money, or reduction, or entire redemption of the quit-rent) on condition of their maintaining and clothing a certain number of convict servants. As the government subsequently failed to supply the convict labour, the belief became general, that the

attend at those times ?”—“ Not at all. I think a little encouragement being given to them would lead to a much stricter observance of the forms of religion. I think it would be a very good plan to have a clergyman to a district, although he had no fixed church.”—*Evidence of Captain M. C. O'Connell.*

quit-rents would be either remitted or compromised. In former years, in fact, government had so much money at command, that the small amounts reserved in the shape of quit-rents were considered beneath their notice—they were never demanded—the land-owners, consequently, adopted the very natural impression that government intended to abandon the claim, and it was not until the late exhaustion of the land fund by immigration, and the prevention of its renewal by the “pound-an-acre” Act, that the government ever thought of demanding the quit-rents, which in some cases have accumulated, (the land, perhaps, having passed through a number of hands) until the government claim far exceeds the whole value of the land. The question is extremely well stated in the evidence of Henry Dangar, Esq., of Neotsfield, one of the largest stock-holders in the colony, and who was for some years attached to the Surveyor-General’s department. An extract is given below, in the form of a note.*

* *By the Chairman.*—“What is your opinion as to the effect of the government enforcing the payment of large arrears of quit-rents?”—“The enforcing of quit-rents at this time is felt by the debtors as very severe; it is considered that a great part of them should be remitted altogether, because they were principally incurred when the colonists were receiving the full and very beneficial advantages of the Assignment System, and because the settlers during Sir Thomas Brisbane’s government were bargained with, that the maintenance of convicts, at £16

It therefore appears, that the enforcement of these claims, after they had almost become forgotten, (so much so, that many parties have purchased land from grantees, without ever hearing of the existence of such claims) is an act of most injudicious policy which can only tend to the ruin of many individuals, and to the general weakening of the

per annum, should be taken in redemption of quit-rents at twenty years' purchase, which convicts, in most cases, the government have not been able to supply; and because, when these quit-rents were instituted, there was no idea of assessments on land through District Councils. I understand that the greater part, if not the whole, of the quit-rents of the million-acre grant to the Australian Agricultural Company, has been redeemed in this manner, and I am of opinion, that faith should have been kept with the public as well as with this influential company, who have reaped a double advantage by insisting on government fulfilling their bargain, and have had a most numerous body of convicts given to them in the assigning days."

* * * *

"Do you think it an oppressive exaction, on the part of the government, to demand these accumulated arrears of quit-rents, which for many years were in abeyance, so that the parties were led to suppose the government had foregone its claim?"—"I think it would, particularly in those cases where settlers took land in dependence upon the agreement entered into by the authorities at Downing Street, wherein their redemption was bargained for."

* * * *

By Mr. Robinson.—"Have you heard any instances of property being sold at very low rates to pay quit-rents?"—"I have."

"Will you state the particulars?"—"I was not present

public confidence in the consistency of government. A subject cannot recover a debt from a subject of more than six years' standing; and, though as a matter of law, "*nullum tempus occurrit Regi*," (no time affects the claims of the Crown) it is impossible not to acknowledge the force of the reply given by the late Mr. Francis Kemble, when this difficulty was suggested to him by Mr. Lowe, one of the legal members of the Committee:—"I think any extension of claim, beyond that which a subject could legally enforce, impolitic and unjust, and that the parties owing quit-rents might fairly infer, from the long and doubtless advised forbearance of the Executive, that they would not be called upon at all, such forbearance being naturally considered as the equivalent for the loss of advantages which the occupiers of lands so charged calculated upon receiving from the Crown, when they engaged to make these payments."

10. *Mineral Reservations*.—The discovery of several valuable mines in South Australia, has forced on the attention of recent grantees in New South Wales, that their grants contain reservations

at the sale, but have been informed that a sale took place in the district of Scone, under a levy for quit-rents, and that sheep were sold for about sixpence a head. I have also heard of an instance at William's River, where there was a great sacrifice of property; horses, carriages, &c., being sold at a very low rate." (The common price of sheep at present is from 6s. to 8s.)

to the Crown of mineral wealth. The Australian Agricultural Company have a monopoly of coal till the year 1862. Since this monopoly was granted, government has generally endorsed the deed of grant with a reservation of minerals, even though the promise of the grant had been made before the monopoly was granted, till which time no regulations specifying such reservations were in force. Grantees thus situate feel it a hardship that they cannot work mines without yielding an advantage to the Crown.

11. *The Compact*.—It has ever been a subject of complaint to the colonists that the management of the Crown lands, and the revenues arising from them is not placed under the control of the Governor and Legislative Council. It had always been understood that the defrayment of the expense of Police and Gaols was consented to by the colonists, on condition of their receiving the surplus of the Land Fund, beyond the sums appropriated for the assistance of emigrants. The matter was communicated to the old council by Sir Richard Bourke, on the 18th May, 1835, when he informed the council, that, to enable them to make provision for this charge, (Police and Gaols), His Majesty had been graciously pleased to place at their disposal the surplus of the Land Revenue, and of the casual resources of the Crown beyond the sums appropriated for the assistance of emigrants. The Council naturally considered this as

the establishment of a compact between the Crown and the Colony—the former surrendering the management of its casual and territorial revenues, and the latter in return undertaking to provide for the expense of the Police and Gaols.* Notwith-

* The following extracts from official documents will place the nature of the “compact” about which so much has been written and said, in an intelligible point of view.

1. *From a Despatch from Sir Richard Bourke to the Rt. Hon. E. G. Stanley, September 1, 1834.*—“Until the last year, the income derived from Crown lands and all other sources of revenue, formed a general fund, from whence the expenditure of the colony was defrayed. Since the receipt of the circular despatch of Lord Goderich, of the 4th of March, 1832, this practice has been discontinued, and the income of Crown lands has not been taken as forming any part of the Ways and Means of the years 1833, 1834, or 1835; nor has its receipts or expenditure been published, or laid before the Council in the Abstract for 1833; but the expenses of emigration to this colony under the direction of his Majesty’s government have been paid from these revenues.”

2. *From a Letter from the Secretary to the Treasury to the Secretary of State for the Colonies, September 23, 1834.*—“At New South Wales considerable payments have been made from the local revenue towards the expenses of the Police, and it is proposed in the Estimates of Expenditure for 1834, adopted for the Colonial Council, to apply £8000 to this service; but at the same time, the receipts from sales of Crown lands, fines, and some other heads of casual revenue, formerly paid into the Military Chest, have latterly been carried to the credit of the Colonial Revenue.

“Under these circumstances, it appears to my Lords, that the time has now arrived, when the arrangement of 1827—(alluding to the arrangement in Governor Darling’s

standing all this, however, the government has continued, agreeably to instructions from Downing

time, when the Crown Revenues were first surrendered in consideration of the Civil List, but which arrangement had been virtually nullified by Lord Goderich's circular)—may be most properly revised, and the intention then entertained, of charging further portions of the expenditure incurred in these colonies upon the Colonial Revenues carried into effect, by the transfer to the Colonial Treasuries of such charges as are now defrayed from the Military Chests, for the Police establishments, for Gaols, and for the Colonial Marine, exclusive of vessels hereafter adverted to ; the Commissariat still continuing to pay, from funds provided by this country, all charges immediately connected with the custody and superintendence of the convicts, including the penal stations, and the medical establishment ; and also the vessels employed in communicating with the penal stations, and detached military posts.

“ My Lords have no recent statement before them of the exact amount of the charges thus to be transferred to the Colonial Funds ; but they conceive that they will not exceed £25,000 per annum at New South Wales, and £12,000 per annum at Van Diemen's Land.” —(The amount on the estimates for 1845 in New South Wales, was £85,250. 16s. 8d.)

“ They are aware that it may be alleged, that the very heavy expense of Police, which constitutes by far the greater portion of these amounts, as well as the charges attending the gaols, are principally rendered necessary by the presence of the convicts ; but as the great and rapidly increasing prosperity is mainly to be attributed to the advantages derived from the labour of the convicts, and as the necessity for the large Police establishments arises from the dispersion of the convicts for the accommodation of the other settlers, it appears to my Lords, that the expenditure

Street, to withhold the management of these revenues from the local legislature ; and the childish

in question may be most legitimately charged upon the Colonial Revenues ; at the same time they are prepared to acquiesce in the local treasuries continuing in the receipt of any surplus of the land revenues, beyond the sums appropriated for the assistance of emigrants, and of the other casual revenues of the Crown, and to allow the colonies the benefit of the labour in making roads, or on other public works, of those more refractory convicts who may be compelled to work in the chain gangs."

This last passage is quite authoritative, as to the right of the Colony to the surplus of the Land Fund, beyond what was applied to emigration purposes. But plain as this appears to be, an attempt was made by the apparently accidental introduction of an "&c.," to neutralize the obvious conclusion to be drawn from it, as will be seen from the following extract.

3. *From a Despatch from Lord Glenelg to Sir Richard Bourke, July 10, 1835.*—"By the enclosure to my predecessor's despatch, No. 39, of the 15th of November last, you would perceive that his Majesty's government have acceded to the principle of the Local Treasuries of the respective Australian colonies receiving any surplus of the land revenue, and of the other casual revenues of the Crown, beyond the sums appropriated to the purposes of emigration, &c. ; and in the spirit of that arrangement, you will consider yourself authorised to place in the Colonial Treasury whatever revenue of the Crown may remain unappropriated at the expiration of every year, after paying the expenses incurred on account of emigration, and after defraying any other charges which his Majesty's government should think proper to direct should be borne on that revenue. At the same time, it cannot be too distinctly understood, that the directions just given are not to be

plea attempted to be raised is, that though the surplus was to be carried to the credit of the Colonial Revenue, yet government was still to retain the power of disposing of it, notwithstanding the additional burdens imposed on the colony. The colony was thus placed by government in the position of a school-boy who asks his father for a shilling on a holiday, and to whom his cautious parent replies : “ Yes, certainly, I will give you a shilling with pleasure, *but—I shall keep to myself the power of spending it !*”

Having thus reported upon the various subjects submitted to their consideration, the Committee proceed to offer several recommendations with a view to the procuring of redress. The nature of the recommendations will have been inferred from the foregoing remarks and extracts. It was proposed, that the arbitrary powers of the Commissioners should be restricted, and that those powers should be transferred to some tribunal of the nature of a jury, over which the Commissioner should preside ; that the license-fee should be either abolished, or reduced to a merely nominal sum, and an

taken as divesting the government of the full and uncontrolled power of applying the Crown revenues in part, or in whole, without the consent or intervention of the legislature.”

Such trifling as this is unworthy of the British government ; but, under any circumstances, Lord Glenelg’s letter is of no force except as expressing his Lordship’s opinion. The “ *litera scripta*” is the Treasury letter.

assessment imposed, such as the legislative council might think reasonable, with reference to the proposed abolition of the license-fee—the said assessment being made part of the ordinary revenue, out of which the expense of the mounted Police, (an extension of which is proposed to be substituted for the border Police,) and of the Commissioners of Crown lands, should be defrayed.

The Committee further recommend the total and immediate repeal of the 5 and 6 Victoria, c. 36, as far as regards New South Wales; as well as the repeal of that part of the Constitution Act, which prohibits the council from interfering with the Crown land revenues; and the vesting the management of those revenues in the Governor and Legislative Council of the colony.

9. INSECURITY OF LIFE AND PROPERTY COMMITTEE.

During the early part of 1844, two murders of a very horrible character were committed in Sydney. In one case, a Norfolk Island expirée, who held a ticket-of-leave, had gone into the shop of a poor widow, named Ellen Jamieson, and asked for some trifling article. While Mrs. Jamieson was serving him, the ruffian raised a tomahawk, which he held in his hand, and clove the unfortunate woman's head in a savage manner. She lingered for a few days, and died, leaving two orphan children. The

murderer, whose name was John Knatchbull, was proved to have been a wretch of the most abominable description;* and though an attempt was made to set up a plea of insanity, a barrister being employed by the agent for the suppression of capital punishment, so foul a villain could not be saved from the gallows. It is gratifying to add, that Sir Edward Knatchbull, the brother of the criminal, has sent out a handsome donation for the orphans of Mrs. Jamieson.

The other case excited, if possible, greater sensation than the murder of Mrs. Jamieson. The victim was Mr. James Noble, well known in Sydney as a general agent, and a man of high character and estimation. Mr. Noble was sitting in his house on Sunday evening, the 26th of May, reading the Scriptures with Mrs. Noble and another female relative, when a tap at the front door caused him to rise for the purpose of opening it. Three men presented themselves, one of whom handed him a letter, which he immediately opened. While reading it, the three men entered the house, and one of them flashed a pistol at Mr. Noble's head; the noise of the cap alarmed the family, who screamed for help, and Mr. N. turned and seized the fellow who held the pistol, whose name was Vigors. After some struggling, this man suc-

* Vide an extract from the evidence of Chief Justice Forbes, in the preceding section under the head of "Norfolk Island."

ceeded in getting away, and effected his escape by the back door, with one of the others. The third attempted to escape likewise, but was seized by Mr. Noble, and held till assistance came, when the man was secured, and Mr. N. was found to have received a deep wound in the upper part of the stomach from a knife.* The wound proved mor-

* Considerable difference of opinion existed as to the real perpetrator of this murder. The difficulty arose from the facts that Mr. Noble was struggling with both Vigors and Martin, and that a knife was found on the persons of both of them. Vigors was charged in the indictment with having inflicted the mortal wound, and was found guilty ; that he was a murderer in intent is plain from his having flashed the pistol ; but that he was so in reality is not so obvious. The jury appear to have regarded principally the fact, that Vigors's knife was sharp-pointed, and Martin's broken. The evidence of Dr. Fullerton, however, the surgeon who made the *post mortem* examination of the body, seems decisive. The instrument, when passing between the lobes of the liver, had wounded both lobes, which could not possibly have resulted from an impulse of the narrow-pointed knife, and the wound bore no appearance of a second effort. The stomach too, was incised to the extent of the external wound, to have done which the narrow-pointed knife must have been driven to such a depth as to have pierced the posterior wall of the stomach, which was untouched. Dr. Fullerton proved also, that the wound on one lobe of the liver was made by a sharp edge, and on the opposite side by a blunt edge ; and that two imprints of blood had been found on the seat of Martin's trowsers, (such as would be made by wiping a knife), and which corresponded exactly to the blade of the knife found in Martin's possession. It may be added, that Vigors,

tal; Mr. N. died within two days. Vigors and Burdett, who had escaped, were taken a few days afterwards, about twenty miles from Sydney. Martin, the man whom Mr. N. had detained, turned approver, and in consequence of statements made by him, an old ticket-of-leave holder, named Rankin, was apprehended as an accessory before the fact, in supplying the murderers with the pistol and knife. Vigors and Burdett were both hanged; but doubts being entertained of Rankin's guilty knowledge in the matter, his case was sent home for consideration.

The facts which rendered these murders so startling, were, that all the criminals were Norfolk Island convicts, and the three men, Vigors, Burdett, and Martin, were actually under sentence in Hyde Park barracks. They had escaped from the gang as they were entering the church; and, having a plain dress concealed under their branded clothing, they retired into an old shed, and throwing off the slops, sallied out in the garb of free men. These circumstances diffused an almost universal feeling of alarm through the city, and, indeed, through the colony. The feeling, which has been occasioned by the first intimation from the Secretary of State for the Colonies, that Norfolk Island

though a hardened and shameless villain, who took a pride in confessing the catalogue of his enormities, to the last denied having stabbed Mr. Noble, and boldly accused Martin of being the guilty party.

Expirees were to be allowed to land on the shores of this colony *with privileges at least equal to those conferred by a ticket-of-leave*, was revived with additional force. The murderers of Mr. Noble, indeed, had been sent from Norfolk Island as invalids, and ought to have been under strict surveillance in the barracks; but it appeared from the evidence of the approver Martin, and of other witnesses examined at the time, that the security of the barracks was in a great degree imaginary, there being no difficulty in evading the vigilance of the watchmen, or in putting it to sleep by a silver opiate, and then clambering over the outer wall.

In consequence of the excitement which prevailed, a Select Committee of the Legislative Council was appointed, on the motion of Dr. Nicholson, to enquire into the state of the Sydney Police, and the nature of the discipline in Hyde Park Barracks; and to consider the expediency of remonstrating against the introduction of Norfolk Island Expirees into the Colony.

It is possible that the shock which the public mind had received by the barbarous murders just mentioned, magnified the danger which existed. No emotion of the mind is so self-procreative as fear; and the dreams of the sensitive were broken by visions of tomahawks, pistols, and shoemakers' knives. These alarms, however, soon subsided, from the want of fresh sustenance, and the peace of the city was restored. One good effect certainly

resulted from the enquiries of the Committee. The Executive received a pretty strong reminder on the subject of the discipline observed in Hyde Park Barracks, and it is not to be feared that they will again fall into the same state of irregularity. With regard to the Norfolk Island Expirees, though the regulation on the subject has not been rescinded, yet there is no doubt, that such order will in future be taken with these refractory gentlemen, as to prevent their presence in the colony becoming a source of alarm.

3. ELECTIVE FRANCHISE AND REPRESENTATION COMMITTEE.

This Committee was appointed, on the motion of Dr. Lang, "to ascertain whether any, and what, measures are requisite for the extension or improvement of the representation of this colony, under the Act of Parliament, 5 & 6 Victoria, cap. 76."

The chief points submitted to the Committee were :

1. The propriety of extending the Elective Franchise to leaseholders of land.
2. The proposed extension of franchise to squatters, or persons licensed to depasture sheep and cattle on Crown lands ; and
3. The representation of Sydney and the colony generally.

The Committee, after considering a large body of evidence, both written and oral, decided on recommending that leaseholders of and at a rental of £20 per annum, should be entitled to vote; that, referring to the prospect of some permanence of tenure being conceded to the squatters, the franchise should be extended to every squatter possessed of 200 cattle, or 1000 sheep; and that four additional members should be returned for Sydney, and one for Melbourne, two additional members for the county of Cumberland, and an additional member for each of the counties of Camden, Durham, and Northumberland.*

* The total population of the colony in 1841, was 130,856; the constituency at present appears from the following table:—

	Electors.	returning	Members.
Sydney	2823		2
Cumberland county . .	1344	„	2
Camden county . . .	386	„	1
Northumberland county	369	„	1

Total . . .	8477		24

“ The numerical amount of the constituency that returns the eight members for the six districts is thus more than double that of the eleven remaining districts that return the other sixteen; the eight members being returned

4. CIRCULAR QUAY WHARFAGE BILL COMMITTEE.

The object of this Committee was, to consider the details of "A Bill to make further provision for the payment of Wharfage Rates." A new quay has recently been constructed at the head of Sydney Cove, called the Circular Quay, from which government propose to derive a considerable revenue, by admitting vessels to the use of it, at a lower rate of wharfage, than has been charged by proprietors of private wharfs. The recommendations of the Committee referred merely to regulations for the use of the public wharfs, and of the shed which has been erected on the Circular Quay.

5. GENERAL GRIEVANCES' COMMITTEE.

On the motion of Mr. Wentworth, a Select Committee of ten members was appointed "to enquire into and Report upon all Grievances connected with the lands of the territory."

These grievances the Committee reduced to six heads, viz. :—

1. The Civil List.
2. The newly established District Councils.

at the rate of $732\frac{1}{4}$ electors, and the remaining sixteen at the rate of only $163\frac{2}{3}$ electors, for each representative."—*Report of Committee on Franchise and Representation.*

3. Want of responsible Government.
4. Police and Goals.
5. Want of legal remedy against the Crown.
6. Tenure of Office of the Judges.

1. The Civil List is imposed on the colony by the schedules annexed to the 5th and 6th Vict. c. 76. So long as no representative legislature existed in the colony, the application of the revenue was necessarily fixed in some respects by the Crown ; but the representative element having been admitted into the Constitution, the colonists now consider that they have a right, not only to the disposal in detail of the sums enumerated in the schedules, but also to claim the cession of the Crown revenues, which, in every similar case, has been at once made. They consider that the power of appropriation is, by the principles of the British Constitution, vested only in the representatives of the people. An attempt was, indeed, made by the 6 Geo. III. cap. 12. sec. 1., to except the American colonies from the operation of this principle ; but the revolt of those colonies convinced the British Parliament that such an exception was unjust and unconstitutional ; and the attempt to enforce it was explicitly condemned by the Declaratory Act (18 Geo. III. cap. 12. sec. 1.), which has properly been designated “ the Magna Charta of Colonial Representative Rights.”

It is not to be wondered, therefore, that the

colonists should consider the Civil List of £81,600, imposed on them by those schedules, as a great Constitutional Grievance, nor that they should remonstrate strongly against an impost so enormous, and for which they have received no equivalent.

2nd. With respect to the District Councils, the opinion of the Council will have been sufficiently gathered from the fact already recorded, that they declined to entertain a Bill submitted to them by his Excellency, for the purpose of explaining and extending the powers of those Councils. As these Councils, however, occupy a very prominent place in the Constitution Act, it may be proper to give an outline of the grounds on which they have been considered so very objectionable by the colonists. The evidence of Alexander Berry, Esq. contains such an outline, and exhibits, in a forcible manner, the very censurable plan of adopting untried theories on the mere suggestion of persons utterly destitute of local experience. Mr. Berry is one of the oldest settlers in the colony, holding forty thousand acres of land, and has devoted the whole of his time to the consideration of the best means of promoting the interests of the colony. He is a non-elective Member of the Legislative Council. With reference, then, to the District Councils, Mr. Berry states:—"I consider them utterly unfitted to the colony; moreover, I do not consider them fitted to the circumstances of any country whatever; they have never been tried, and have never existed any-

where, being a new theory ; . . . they would ruin every great landed proprietor in the country, every one in succession ; those they did not ruin entirely, if there were any such, would be rendered so uncomfortable, that they would wish to leave the country ; and, moreover, no other person would purchase an acre of land in New South Wales."

" Do you not conceive that any taxation that may be imposed upon land under the Act by which those District Councils are constituted will, in fact, lead to the resumption of the land ?"—" Unquestionably ; and Lord Sydenham boasted, with reference to a similar measure adopted in Canada, that such was the intention. I should have no objection to assist them (government) with local taxation, upon a proper principle, in making roads and bridges, but not through government land ; nor should I be willing for the funds raised in one part of a district to be employed at the other end, where the parties taxed had no interest. Local taxation should be for local purposes only. In the case of the Bathurst road, there are about ten settlers, who would have to keep up about one hundred miles of road."

" As a matter of fact, is there any other colony of the Crown so heavily taxed as this ?"—" I have in my hand a paper, extracted from the Colonial Magazine for 1842, p. 244, in which there is an abstract of the Revenue and Population of nine British colonies, showing the comparative taxation

of the population per head * The cost of the machinery of this Bill would amount to more than the entire general taxation of Canada."

" You think any further direct local taxation will be impracticable?"—" Yes, the people are so heavily taxed already."

3rd. The want of responsible government is an evil which is more or less felt in all colonies. No legal responsibility attaches to the Members of the Executive Council for any advice they may give his Excellency, however mischievous may be the measures adopted in consequence. The establishment of some Colonial Tribunal of Impeachment seems necessary to the right management of public affairs.

* The following is the Table alluded to by Mr. Berry. Though not expressly mentioned, it is obvious that the calculations are taken from the year 1840, in which year the Land Fund alone of New South Wales amounted to upwards of £300,000. Since that time the population has increased, and the revenue diminished, the average per head for 1843 being £1. 15s. 6½*d*, an average, however, considerably exceeding that of any other colony.

British Colonies.	Revenue.	Population.	Average taxation per head.		
	£.		£.	s.	d.
Newfoundland . . .	30,000	75,000	0	9	7
Barbadoes	42,000	100,000	0	8	5
Nova Scotia	60,000	150,000	0	8	0
New Brunswick . . .	100,000	124,000	0	16	8
Upper Canada . . .	120,000	410,000	0	5	10
Lower Canada . . .	150,000	605,000	0	5	0
Jamalca	500,000	361,500	1	7	8
Cape of Good Hope .	150,000	100,000	0	18	0
New South Wales .	650,000	90,000	7	4	5

4th. The question of Police and Gaol Expenditure has already been explained.

5th & 6th. The want of any legal remedy against the Crown, and the insecure tenure of office held by the Judges, are evils so obvious, as to require not a single remark.

6. EDUCATION COMMITTEE.

On the motion of Mr. Lowe, a Select Committee was appointed on the 21st June, "to inquire into, and report upon the State of Education in this Colony, and to devise the means of placing the Education of youth upon a basis suited to the wants and wishes of the community." As a future chapter of this work is devoted to the important subject of Colonial Education, it is unnecessary to anticipate the proper business of that chapter. It may be proper, however, here to state, that the Committee suggested to the Council the propriety of introducing that system of Education, commonly called the Irish system, into the colony. The resolution affirming the propriety of such a measure, was carried by a majority of one. In consideration of this circumstance, and of the great number of Petitions presented to the Council against the proposed system, his Excellency declined to recommend the appropriation of any public moneys to that object.

7. PRIVILEGE COMMITTEE.

The Committee was appointed on the 3rd July, in consequence of the receipt by Robert Lowe, Esq., M.C., of a letter which Mr. Alderman Macdermott sent by a friend, requesting an explanation of an expression used by Mr. Lowe in a debate in Council, referring to Mr. Macdermott. Mr. Lowe considering himself privileged, as a member of a Legislative Assembly, from accounting to any one for the language which he used, refused to give the required explanation; on which Mr. Macdermott sent two friends to demand an apology, or to propose ulterior measures. Mr. Lowe declined either to make the apology, or to accept the alternative suggested, but made affidavit of the attempt to provoke him to a breach of the peace, and Mr. Macdermott and the other gentlemen were accordingly bound over. Mr. Lowe, however, thought it his duty to state the circumstances to the Council, and the question was referred to a Select Committee, who recommended that the Attorney-General be requested to move the Supreme Court for leave to file a criminal information against the parties guilty of the breach of privilege; and further, that a Bill should be passed, defining the powers of the Council, so as to prevent the recurrence of similar unpleasant cases.

8. MARRIAGE BILLS' COMMITTEE.

Two Bills were introduced by Mr. Cowper, on the 1st August, and having been read a first time, were referred to a Select Committee. The objects contemplated by the two Bills were, the prevention of Clandestine Marriages, and the securing an effectual Registration of Births, Marriages and Deaths. After taking some preliminary evidence, the Committee decided on recommending the postponement of both Bills till next Session.

9. DISTRESSED LABOURERS' COMMITTEE.

As the distress among the labouring class, which in the former Session excited the attention of the Council, continued to prevail to a great extent, a Select Committee was again appointed to investigate the actual amount of unemployed labourers. The Council, in pursuance of the recommendation of the Committee, passed resolutions to the effect, that, in the opinion of the Council, the most desirable mode of providing employment for the distressed labourers would be the construction of bridges in the interior, and suggesting the appropriation of a sum of money for that purpose, which might be repaid to government by a toll or pontage.

10. COLONIAL SPIRITS' EXPORTATION BILL COMMITTEE.

A Bill, to enable Colonial distilled spirits to be exported under certain regulations, was referred to this Committee, who, after taking evidence, recommended the passing of the measure. It was accordingly passed by the Council; but his Excellency, conceiving probably that the Bill would be viewed unfavourably by British exporters, withheld the Royal Assent.

11. PUBLIC WORKS' COMMITTEE.

This Committee was appointed to inquire into the expense of public works. Formerly these had been executed by contract, but since the commencement of the distress among the labouring classes, a method had been adopted of employing labourers under the supervision of the Colonial Architect, without the intervention of a contractor. The wages paid by government were only twelve shillings a week for labourers, and fifteen and eighteen for mechanics, yet it appeared from the evidence of competent architects, that, in the case of the New Custom House in Sydney alone, the public had suffered a loss, and that the work would have been done better, and more cheerfully by contract. It appeared also that government

had, in many instances, been imposed upon ; and for these reasons the Committee recommended the resumption of the former system, and also an inquiry by his Excellency into the cases of deception disclosed by the witnesses examined.

12. COURTS OF REQUESTS' AMENDMENT BILL COMMITTEE.

A Select Committee was appointed to inquire into the working of the Courts of Requests' Act, since the jurisdiction of the Sydney Court had been extended to cases of £30. While the Committee were proceeding with their investigations, however, a letter of the Judges of the Supreme Court to his Excellency, the Governor, was laid on the table of the Council, which arrested their progress, and induced them to recommend a postponement of the measure till the next Session.

13. BANK OF AUSTRALIA SHARES' BILL COMMITTEE.

A Bill was introduced into the Council by Mr. Wentworth, to enable the Bank of Australia to dispose of certain real and personal property in New South Wales, in certain shares, *by lot*. From the depreciation of property, to which allusion has been so frequently made, the Bank had become unable to realize sufficient to meet their liabilities. The property, in fact, was so

large, and the rate which could be expected to be obtained in the present state of things was so small, that their operations as a Bank had been entirely suspended, and nothing but the entire ruin of the shareholders could be the result, if some measure of relief were not adopted.*

* An extract or two from the evidence taken before the Committee to whom the Bill was referred, will render the matter more intelligible.

1. *By the Chairman.*—"Are you prepared to state the amount of debts and liabilities that you speak of generally as 'the large amount' that the bank has incurred; what is the amount of debts and liabilities here referred to?"—"The claims upon the bank amount to between £230,000 and £240,000."

"I think you stated to the Committee that you consider the landed property you possess, worth about £75,000?"—"From £70,000 to £100,000."

By Dr. Nicholson.—"You stated, I think, that you have £30,000 of good bills?"—"About £35,000." (Besides this, the Bank holds stock to the value of £6000, and has an interest in steam-boats to the extent of £5000.)

"That would make the whole amount of assets £115,000, and the gross amount of claims against you is two hundred and thirty odd thousand pounds, so that in point of fact the actual deficit is upwards of £115,000?" "About 10s. in the pound."—*Evidence of John Walker, Esq., Secretary to the Bank.*

2. "You are aware, I presume, of the nature of the different properties held by the Bank, which it is proposed to divide?"—"I am."

"Have you considered whether there is any manner in which those properties may be divided, other than by lot?"—"I have, after a great deal of investigation, arrived at the

It is unnecessary to say, that the Bill referred to this Committee excited the greatest interest in

conclusion, that it would be quite impossible in the present depressed state of the market to effect sales ; I have known many instances, in which properties forced into the market were sold at prices completely inadequate, and I believe if a forced sale should be attempted of the large properties held by the Bank of Australia, it would be impossible to find purchasers ; at this time I know an instance of property offered for sale at fourteen hundred pounds, the buildings upon which, I have heard, and believe cost four thousand pounds, and the ground two thousand pounds more."

"If the properties of the bank were divided among the proprietors, could any other mode, from the nature of the properties, be adopted than by lot?"—"I know of no other way ; I am convinced that parties apprehensive of the consequences likely to result from their being proprietors would not purchase the properties on any terms."

By the Attorney-General.—"Do you think if a spirit of gambling speculation were to start up again, it would be a great public calamity?"—"I do."

"Do you not think this scheme is calculated to promote that?"—"I do not, and even if the relief sought for were dangerous, any indulgence granted would be under observation and control ; in some cases poison may be beneficially used."

By Dr. Nicholson.—"Alcohol may be beneficial to a dying man?"—"No doubt of it."—*Evidence of James Norton, Esq., late Chairman of the Bank.*

3. "Have you seen the Bill proposed to be introduced for the division of the property held by the bank?"—"I have read it, but not very carefully."

"Do you see any objection in point of principle to the plan?"—"I think a lottery is a very objectionable way of raising money, when we have an alternative ; I would never

the public mind; but notwithstanding the strong facts and opinions brought out in evidence, his Excellency, the Governor, was advised to reserve the Act for her Majesty's pleasure.

SESSION 1844. ACTS.

The more important Bills of the last Session were referred to Select Committees, and have received notice under the previous head. A brief remark on one or two of the others is all that will be necessary to complete this section.

LAW OF EVIDENCE ACT.

(8 *Victoria*. No. 1.)

In a small community like that of New South Wales, the inquiry after Truth in Courts of Justice was often obstructed by incapacities created by the existing law, whereby parties, by reason of crime, or of some interest in the matter at issue, were precluded from giving evidence. The present Act permits any person, thus formerly incapacitated, to appear as a witness, a precise statement

raise money by lottery when I could do so by a fair and legitimate tax; but when it is the only means, I see no insuperable objection to a lottery."—*Evidence of Robert Lowe, Esq., Barrister-at-Law.*

of the circumstances under which the witness appears being made, and being taken to affect his credit, as may be decided according to the merits of each particular case. The parties in a suit, or their husbands or wives, are still, however excluded.

APPRENTICES' ACT.

(8 *Victoria*. No. 2.)

This useful Act has placed the law relating to Apprentices in New South Wales on a much more satisfactory footing. Masters may now bring before two Justices of the Peace their refractory Apprentices, and on their making oath as to any breach of duty, the Justices may punish the offender by three days' solitary confinement. Male apprentices, under fourteen years of age, however, and all female apprentices, are exempt from this species of punishment. To protect the apprentice, on the other hand, Justices are authorized to hear complaints, and if satisfied that the Master is ill-treating, or not duly instructing his Apprentice, may impose a fine of Ten Pounds, to be applied for the benefit of the Apprentice, or may, even, if necessary, cancel the indentures. The articulated Clerks of Attorneys or Solicitors, or the Apprentices of persons engaged in any professional or scientific pursuit, or Apprentices for whom a greater premium than £30 has been

paid, are exempt from the operation of this Act; and any parties may, in drawing an indenture, insert a clause exempting themselves mutually from the operation of this Act.

RESERVED ACTS.

Besides the Bank of Australia Shares' Act, the nature of which has already been explained, a short Act passed the Council at an early period of the Session, fixing the Salary of future Governors of New South Wales at £4,000 per annum, on which his Excellency declined expressing any opinion.

Another reserved Act was of much greater consequence. It was entitled, "An Act to regulate the rate of Interest on Money." The Act was only proposed to be continued for two years, and would have formed a singular experiment in this colony, where almost every rate of Interest has been exacted, no regulation protecting the needy borrower from the avarice of the lender. The Act proposes to fix the rate of Interest at eight per cent.

On the 30th of December, his Excellency, the Governor, prorogued the Council in person. Previously to his Excellency's arrival at the Council Chamber, the Speaker reported: That of the twenty-four Bills passed by the Council during

the Session, eighteen had been assented to ; three had been reserved for the notification of her Majesty's pleasure thereon, and from the remaining three, the royal assent had been withheld. The announcements of the reservation of the Bank of Australia Shares' Bill, and of the Interest Bill, respectively, were received with visible dissatisfaction ; and this feeling was manifested openly by one or two members, who left the Chamber immediately on the announcements being made.

His Excellency having arrived at the Council Chamber, concluded the business of the Session with the subjoined speech, which is given entire, as the tone of the whole, and the expressions of the last paragraph have been very severely animadverted on by the opponents of his Excellency's administration :

“ Mr. Speaker and Gentlemen,

“ I am happy in being able at length to bring this protracted session to a close, and to release you from further attendance.

“ As you have, Gentlemen, declined to take into consideration the Estimates, which early in the session I laid before you for the administration of Justice in the year which is now ensuing, I have only to express my hope, that the funds which the Law had previously placed at my disposal may be found sufficient to keep open the ordinary tribunals of the colony ;—the resources which are within

my reach, I shall rigorously devote to the purposes to which they are applicable; but I shall not suffer myself to exceed in any manner the authority which I constitutionally hold, nor to set aside the instructions of her Majesty.

“The supplies which you have granted for other branches of the public service, I shall expend with the utmost regard to economy.

“I am happy to be able to congratulate you on the marked improvement which has recently manifested itself in the general condition of the colony. The rise which has taken place in England in the value of our chief staple, has had a very cheering influence on the whole community, and, by the blessing of Providence, we continue to enjoy the most abundant seasons.

“Gentlemen, you have, in the latter part of the present session, entrusted to my care various addresses to her most gracious Majesty, praying for extensive alterations in the Constitution, which it pleased her Majesty and Parliament very recently to grant to this portion of her dominions; these addresses I shall take the earliest opportunity of transmitting to her Majesty's principal Secretary of State for the Colonies, in order that they may be presented to her Majesty; and they will, I have no doubt, receive her Majesty's most attentive consideration.

“Many months must, however, necessarily elapse before her Majesty's replies to these addresses

can be received in the colony ; and I consequently consider it my duty openly to declare my opinion that many of the demands of the Council are such as never will be granted,—such, indeed, as never can be granted, unless it be the pleasure of her Majesty and Parliament fundamentally and entirely to alter the relations on which this country now stands to the British empire.”

Thus terminated the Session of 1844.

CHAPTER II.

STATISTICS.

IN this chapter we propose to introduce a few Statistical Tables, which could not be conveniently placed elsewhere. The facts presented by these tables will be of vast importance, and will prove, more eloquently than several pages of speculative reasoning, the inexhaustible nature of our resources, which are as yet but beginning to be opened up. The first and most important subject to be noticed is:—

I. POPULATION.

Within twenty-five years, five censuses have been taken of the population of New South Wales; viz.: in the years 1821, 1828, 1833, 1836, and 1841. There is considerable difficulty in comparing these censuses with each other, as they were not all conducted on the same principle, and did not all enumerate the same particulars. The last census, however, taken on the 2nd of March, 1841, contains most ample information. An

abstract of it will, therefore, be presented. We shall confine ourselves to the three heads of Age, Civil Condition, and Religion.

TABLE I.

POPULATION OF NEW SOUTH WALES ACCORDING TO AGE.
1841.

Ages.	Males.	Females.	Totals.
Under two years	3,707	3,967	7,674
Two and under seven	6,633	6,581	13,214
Seven and under fourteen	6,306	5,864	12,170
Fourteen and under twenty-one	6,045	4,882	10,927
Twenty-one and under forty-five	53,381	19,513	72,894
Forty-five and under sixty	7,212	2,175	9,387
Sixty and upwards	1,884	576	2,460
General Totals	85,168	43,558	128,726

In the above Table are not calculated a floating population of 2,130 men and boys employed in colonial shipping. If these be added, the number of males becomes 87,298, and the total population 130,856.

From the Table, however, it appears that the proportion of females to males throughout the colony is as 51·1436 to 100. The disproportion is chiefly observable in the four last periods, the persons enumerated in which are chiefly immigrants, free and bond, but more especially the latter, as, while the numbers of males transported to the colony, from its foundation in 1787 to the discontinuance of transportation in 1840, was 51,082, the whole number of females transported

was only 8,706 ; the females being to the males in the proportion of 17 to 100.

Mr. Mansfield, in his able pamphlet on the Census of 1841, gives the following Table, showing the comparative deficiency of females among three classes of the inhabitants at that time.—*Vide Analytical View*, p. 13.

Class.	Males.	Females.	Totals.	Deficiency of females.
Born in the colony . . .	14,819	14,630	29,449	189
Immigrants . . .	30,745	22,158	52,903	8,587
Persons transported . . .	39,604	6,770	46,374	32,834
Totals . . .	85,168	43,558	128,726	41,610

Let the total of this deficiency of females be represented by 1,000, and the respective parts of the several classes will be as follows :—

	Parts of 1000.
Born in the colony	5
Immigrants	206
Persons transported	789
	<hr/> 1000

From these facts, Mr. Mansfield endeavours to draw a sweeping condemnation of the transportation system ; he ought, however, to have restricted his censures to the injudicious manner in which it was conducted in former years.

TABLE II.

POPULATION OF NEW SOUTH WALES ACCORDING TO CIVIL
CONDITION. 1841.

Condition.	Males.	Females.	Totals.	
FREE.				
Born in the colony . .	14,819	14,622	29,441	} Total free, 101,741.
Arrived free . . .	30,745	22,158	52,903	
Freed persons . . .	15,760	3,637	19,397	
BOND.				
Holding tickets of leave .	5,843	316	6,159	} Total bond, 26,985.
In government employment	6,658	979	7,637	
In private assignment .	11,343	1,846	13,189	
Totals . . .	85,168	43,558	128,726	

From this Table it appears that the proportion of bond to free throughout the colony was, in 1841, as 100 to 377. In 1821 there were only 116 free to 100 bond; in 1828 the proportion was 134 to 100; in 1833, 148 to 100; in 1836, 177 to 100. There can be no doubt that the proportion must now (1844) be much greater, both from the influx of immigrants on the one hand, and the discontinuance of transportation on the other.

TABLE III.

POPULATION OF NEW SOUTH WALES ACCORDING TO
RELIGION. 1841.

Religion.	Number of persons.	Proportion in each 1000 of the whole.
Church of England	73,727	572.7
Church of Scotland	13,153	102.1
Wesleyan Methodists	3,236	25.2
Other Protestant dissenters	1,857	14.4
Church of Rome	35,690	277.2
Jews	856	6.7
Mahomedans and Pagans	207	1.7
Total	128,726	1000

Mr. Mansfield thus states the proportion of the Church of England to each of the other religions.—*Vide Analytical View, p. 21.*

Church of England.

560	} to 100 of {	Church of Scotland.
404		All other Protestants.
206		Roman Catholics.
136		All other Christians.
134		All other Religions.

To the foregoing Tables it is only necessary to append the following Return of the increase and decrease of the Population up to the 31st of December, 1843. The Returns for 1844 have not yet been received.

RETURN OF THE INCREASE AND DECREASE OF THE POPULATION OF NEW SOUTH WALES, (INCLUDING THE DISTRICT OF PORT PHILLIP), FROM 1ST JANUARY TO 31ST DECEMBER, 1843; AND OF THE TOTAL NUMBER ON THE LATTER DATE.

	ADULTS.		CHILDREN.		Total.	General Total.
	Male.	Female.	Male.	Female.		
Increase by Immigration . .	3,611	996	453	433	5,493	
„ by *births	3,659	3,493	7,182	
Total Increase	3,611	996	3,926	12,675
Decrease by *deaths	834	344	612	503	2,293	
„ departure	3,158	940	327	305	4,730	
Total decrease	939	..	808	7,023
Net decrease of adults
Net increase of children
Population on 31st Dec. 1842.	5,652
Population on 31st Dec. 1843.	159,889
	165,541

Colonial Secretary's Office,
Sydney, 1st June, 1844.

E. DEAS THOMSON,
Colonial Secretary.

* The Returns of Births and Deaths having been rendered only to the 30th of September, 1843, the number for the last quarter of that year has been taken at the average of the three previous quarters.

The following little Table may also be useful, showing the progressive increase of the population for the ten years, commencing 1834, and ending 1843, and showing an average annual rate of increase of 9932.9.

YEARS.	ADULTS.		CHILDREN.	TOTAL FOR EACH YEAR.
	Male.	Female.		
1834	42,008	12,065	12,139	66,212
1835	45,259	12,647	13,686	71,592
1836	48,375	14,550	14,171	77,096
1837	52,099	15,918	17,250	85,267
1838	57,485	18,000	22,427	97,912
1839	63,784	21,998	28,604	114,386
1840	70,021	25,476	33,966	129,463
1841	75,474	33,546	40,649	149,669
1842	76,528	35,762	47,599	159,889
1843	76,147	35,474	53,920	165,541

From four to five thousand immigrants arrived during the year 1844, and these, with the natural increase of the year, will cause the population to amount to nearly 180,000*.

II. SHIPPING (INWARDS).

NUMBER AND TONNAGE OF VESSELS ENTERED INWARDS,
IN THE COLONY OF NEW SOUTH WALES (INCLUDING
PORT PHILLIP) FROM THE YEAR 1834 TO 1843 INCLUSIVE.

Year.	No. of Vessels.	Tonnage.
1834	245	58,532
1835	260	63,019
1836	269	65,415
1837	400	80,114
1838	428	91,777

* The value of Exports to the South Sea Islands, New Zealand, &c., is included with that of "Foreign States."

Colonial Secretary's Office,
Sydney, 1st June, 1844.

E. DEAS THOMSON,
Colonial Secretary.

The Returns for 1844 are not completed.

VII. AUCTION DUTY.

RETURN OF THE AMOUNT OF AUCTION DUTY, AT $1\frac{1}{2}$ PER CENT, PAID INTO THE COLONIAL TREASURY, AND OF THE AMOUNT OF SALES SUBJECT TO THE SAID DUTY, FROM THE YEAR 1843 TO 1844 INCLUSIVE.

Years.	Amount of duty.			Amount of Sales.		
	£.	s.	d.	£.	s.	d.
1834	2,327	6	10	155,156	2	2½
1835	3,135	16	2	209,053	17	9½
1836	4,697	11	5	313,171	7	9½
1837	4,820	3	11	321,346	7	9½
1838	6,137	10	1	409,166	18	10½
1839	7,700	16	5	513,388	1	1½
1840	18,701	2	10	1,246,742	15	6½
1841	14,455	9	1	963,696	18	10½
1842	10,291	6	8	686,088	17	9½
1843	6,818	9	6	454,565	0	0
Totals . .	79,085	12	11	5,272,376	7	9½

The Return for 1840 shows the tremendous

shock which the colony received in that year, when property to the enormous amount of £1,246,742. 15s. 6½*d.* was brought to the hammer, though much of the same property had probably been purchased for more than double the amount it fetched.

VIII. EXPORT OF WOOL.

RETURN OF THE QUANTITY AND VALUE OF WOOL
EXPORTED FROM THE COLONY OF NEW SOUTH WALES,
FROM THE YEAR 1834 TO 1843 INCLUSIVE.

Year.	Quantity.	Value, as entered in the Return of Exports.
	lbs.	£.
1834	2,246,933	213,628
1835	3,893,927	299,587
1836	3,693,241	369,324
1837	4,448,796	332,166
1838	5,749,376	405,977
1839	7,213,584	442,504
1840	8,610,775	566,112
1841	8,390,540	517,537
1842	9,428,036	595,175
1843	12,704,899	685,647

Notwithstanding the commercial depression which the colony has suffered during the last three or four years, it is peculiarly gratifying to perceive that the export of our staple commodity has been steadily increasing, the value for 1843 exceeding that for 1842 by £90,472. The Returns for 1844 have not yet been made up.

IX. EXPORT OF TALLOW.

RETURN OF THE QUANTITY AND VALUE OF TALLOW
EXPORTED FROM THE COLONY OF NEW SOUTH WALES,
DURING THE YEAR 1843.

Quantity.			Value as entered in the Return of Exports.	
cwts.	qrs.	lbs.	£.	
5,680	2	36	9,632	

The Returns for 1844 are not complete.

X. EXPORT OF OIL.

RETURN OF THE QUANTITY AND VALUE OF OIL, &c.,
EXPORTED FROM THE COLONY OF NEW SOUTH WALES, FROM
THE YEAR 1834 TO 1843 INCLUSIVE.

Year.	Sperm Whale.	Black Whale.	Whalebone.	Seal Skins.	Value, as entered in the Return of Exports.
	tuns.	tuns.	tons. cwt.	number.	£.

The apparent increase observable is occasioned by the sale of land and immigration debentures, to provide for the expense of the last immigrants.

CHAPTER III.

THE COLONIAL CHURCH.

THE high vocation to which Britain is called, is no less than this—to be the moral regenerator of the world. By the diffusion of her language, her literature, and her arts, she has done much to civilize nations before barbarous, and wherever her flag waves, the blessings resulting from such civilization, speedily become apparent. Once it was the pleasing dream of the poet, now it is the sober reality of fact, that on Britain's empire the sun never sets. The loyal Englishman who, in his native land on some festive day celebrated in his country's annals, has given vent to his own attachment to his Sovereign and the Constitution, if his vision were somewhat extended, and his hearing a little more acute, might see in every quarter of the globe festivities sacred to the same event, and might hear millions in every clime shouting with the full burst of patriotic zeal—"Rule Britannia!" "God save the Queen!"

And is it so? Does Britain's Queen hold this wide sway? Does Britain exercise this vast dominion? How high her responsibility! To Britain have been committed "the oracles of God," and upon her does it rest, as at once a sacred duty and a high privilege, to hallow her influence over the nations of the earth by rendering universally known and embraced "the glorious Gospel of the blessed God." To some extent she has acted up to her high commission; and having introduced our readers to some general features in Australia (surely one of the most interesting of British dependencies) we proceed to the task of disclosing the religious state of this colony, how far "the glad tidings" are known, believed and obeyed in this far off island of the south. To a Christian who voyages from England to this land, it is a circumstance which he hails with pleasure, that, after a long buffetting with winds and waves, anxiously desiring his wished for haven; upon his entrance into the magnificent harbour of Port Jackson, (a harbour for capacity and rugged beauty scarcely to be surpassed in the world), one of the first objects which attracts his delighted gaze, is the spire of our principal church. It stands on an eminence in the heart of the town, and is therefore visible from almost every point of observation. May it not raise its spire to Heaven in vain! may crowds of worshippers congregated within its walls learn the way to Heaven, and find here the reality of those

truths which alike in every place are Man's only comfort, a State's only security. By the diffusion of "pure and undefiled religion" in this British colony, situate almost at the antipodes, may not the day be thus hastened when there shall be an exact and beautiful verification of the ancient prophecy, "All the ends of the world shall remember and turn unto the Lord; and all the kindreds of the nations shall worship before Thee."

Two bodies receive state endowment in addition to the Church of England. Of these, one is the Church of Rome. In speaking of this church, we are specially anxious to give correct particulars of its actual condition and prospect. There can be no question but there is a strong bias in the minds of a large proportion of the population in favour of this church. The abundant importation of Irish immigrants has introduced a proportionably large number of Roman Catholics of the lower class. With the exception of some few who held official situations under government, and officers of regiments occasionally stationed in Sydney, the attendance at the Roman Catholic churches is generally confined to the lower orders, but of these very large numbers are constant worshippers. The Rev. Dr. Polding, formerly Roman Catholic Bishop, visited England in November, 1840, and on his return in March, 1843, assumed the title of "Archbishop of Sydney,"—an honour conferred immediately by the Pope of Rome. A short

time after his arrival, a "pastoral letter" appeared in the Australasian Chronicle (the Romish organ of the colony) granting indulgences to the faithful "in virtue of the singular privilege conferred by his Holiness Gregory XVI." This letter was headed "John Bede, by the grace of God, and of the Holy Apostolic See, Archbishop of Sydney, Vicar Apostolic of New Holland," and addressed "To the clergy and faithful of Sydney and its environs health and benediction." The authority which Dr. Polding was anxious to claim, we may easily see to be supreme. Not content with ruling over his own flock, in which rule he had been untouched, he evidently determined to claim full supremacy, to establish the doctrine that himself was the divinely constituted ecclesiastical head, and that all others were heretics from the true faith. This was long known to be the doctrine of the Romish church, but while it was kept concealed, it was not felt necessary to oppose it; when, however, it forced itself unblushingly forward, longer to have been silent would have been a violation of sacred trust, a sacrifice of high principle. Thus felt his Lordship, the Bishop of Australia; and for the conduct which he on this occasion pursued, he is entitled to the thanks and respect of every true lover of the church. For how much also we are indebted to him we shall presently see. His Lordship feeling that to allow this assumption on the part of the Romish church would open the door

to endless encroachments, and might end ultimately in a struggle not only for supremacy, but even for existence, uttered publicly the following protest, accompanied by a circular to the clergy of his diocese. These interesting and important documents in the ecclesiastical annals of Australia, we now subjoin.

“ In the name of God. Amen. By this public instrument, be it declared and made known to all, that in the year of our Lord one thousand eight hundred and forty-three, according to the course and reckoning of the Church of England, on Saturday the twenty-fifth of March, being the festival of the Annunciation of the blessed Virgin Mary, at or near the hour of eleven in the forenoon, before the commencement of the morning service for the day, in the vestry adjoining and pertaining to the Church of St. James the Apostle, in the city of Sydney, and colony of New South Wales, in the presence of me, James Norton, Notary Public, and Registrar of the Diocese of Australia, lawfully constituted according to letters patent of his late Majesty, King William the Fourth, and in presence also of the witnesses whose names are hereinafter recited, the Right Reverend Father in God, William Grant, by Divine permission, Bishop of Australia, did personally put in, and exhibit a certain written protest, and did then and there openly and publicly protest, and otherwise also did profess and do in such manner, and according as was more fully con-

tained in a certain parchment schedule which he held in his hands, and publicly read ; of which schedule the purport is here inserted, and is as follows, without any addition or omission whatever.

“ In the name of God. Amen. We, William Grant, by Divine permission, Bishop and ordinary Pastor of Australia, do protest publicly and explicitly, on behalf of ourselves and our successors, Bishops of Australia, and on behalf of the clergy and all the faithful of the same church and diocese, and also on behalf of William, by Divine Providence, Lord Archbishop of Canterbury, Primate of all England and Metropolitan, and his successors, that the Bishop of Rome has not any right, or authority, according to the laws of God, and the canonical order of the church, to institute any episcopal or archiepiscopal See or Sees within the limits of the Diocese of Australia, and province of Canterbury aforesaid. And we do hereby publicly, explicitly and deliberately protest against, dissent from, and contradict, any and every act of episcopal or metropolitan authority done or to be done, at any time, or by any person whatever, by virtue of any right or title derived from any assumed jurisdiction, power, superiority, pre-eminence or authority of the said Bishop of Rome, enabling him to institute any episcopal See or Sees within the diocese and province hereinbefore named.”

“All and singular the foregoing acts and declarations were had and done as they are above written and recited in the year, month, day, hour and place aforesaid; then and there present (having been specially invited and summoned as witnesses on the premises) the Rev. Robert Allwood, the Rev. Henry Hodgkinson Bobart, the Rev. William Branwhite Clarke, the Rev. Thomas Steele, the Rev. Henry Tarlton Styles, and the Rev. William Horatio Walsh.

“ (L. S.) Signed, JAMES NORTON,
“ Registrar and Notary Public.”

“ We, the undersigned Presbyters, duly licensed within the diocese and jurisdiction of Australia, being present in the Church of St. James the Apostle, at Sydney, in the Diocese of Australia, and colony of New South Wales, on the festival of the Annunciation of the Blessed Virgin Mary, in the year of our Lord, one thousand eight hundred and forty-three, do hereby testify, that the Right Reverend Father in God, William Grant, Bishop of Australia, personally attending and assisting at the celebration of Divine Service, on the festival aforesaid, at the conclusion of the Nicene Creed, standing at the north side of the altar or communion table, of the said church, holding in his hands a certain parchment or schedule, did read therefrom, in our presence, and in the sight and hearing of the congregation, all that Protest hereinbefore

set forth, without any addition or diminution whatsoever.

“ In witness whereof, in the year, and on the day aforesaid, in presence of each other, and before the said Right Reverend Bishop of Australia, we have hereunto set our hands and seals.

“ ROBERT ATTWOOD, B.A.,

“ Minister of St. James's, Sydney, Commissary.

“ H. H. BOBART, M.A.,

“ Minister of St. John's, Paramatta.

“ W. B. CLARKE, M.A.,

“ Minister of St. Simon's, Castle Hill.

“ THOMAS STEELE, L.L.D.,

“ Minister of St. Peter's, Cook's River.

“ HENRY T. STYLES,

“ Minister of St. Matthew's, Windsor.

“ WILLIAM H. WALSH,

“ Minister of St. Lawrence's, Sydney.”

The reasons which induced his Lordship to take this step, may be further gathered from the following circular addressed to the Clergy of this Diocese.

“ The Festival of the Annunciation.

“ Sydney, March, 25, 1843.

“ Reverend Brother.—An occasion of no ordinary importance, and of no less difficulty, constrains me to summon you to the support of the Church entrusted to our keeping; and to claim your assistance, unitedly with that of the whole body of the clergy, to guard it from harm and loss.

Subjoined to this communication you will find a declaratory Protest, which, in fulfilment of my part of the common obligation, I have promulgated in resistance to recent Acts of the See of Rome ; such Acts being in breach and contravention of the canonical laws, usages, and common order, of the household of faith.

“ In calling your attention to this defensive measure, I am not studious of your instruction only ; but it is my desire, that, in communicating to the flock under your charge, the decision which I have formed in this matter, you will explain at the same time the necessity to which I have been reduced. You will, therefore, take care to read, in the hearing of your congregation, during the celebration of Divine Service, and at the close of the Nicene Creed, on some Sunday, or other festival which may be most convenient after the receipt hereof, all that protestation which is hereunto subjoined.

“ I recommend also, that you take occasion to notify to your parishioners the just grounds upon which that instrument had been drawn up ; and after full deliberation, executed, published, and placed upon record in the Registry of this Diocese, as a perpetual testimony against the attempted invasion of the See of Rome.

“ To aid you in the execution of this necessary duty, I proceed to point out to you in what respect, and to what extent, the Act, against which I have

thus solemnly protested, does, by immediate and necessary consequence, infringe on our undoubted ecclesiastical rights and independence, according to the principles of that Catholic Church, to which we have never ceased to belong.

“The inference from the establishment of an Archbishopric with metropolitan privileges within the limits of the province of Canterbury must unavoidably be, that it is intended thereby to deny to the Primate of all England, any rightful possession of Metropolitan jurisdiction within the limits of the new or assumed Archbishopric. Moreover, the erection of the city of Sydney within this already existing Diocese, into an Episcopal See, amounts to a denial that there is a lawful Bishop of Australia, according to the canons and usages of the Church. These are consequences which I could not witness in silence. They may not be universally perceived, or at once admitted, but there will be no dispute concerning them among such as are conversant with the system of the church. According to its general rule, there can neither be two metropolitans of one province, nor two Bishops in the same Diocese. The one of these proceedings would involve a reversal of the Canons of the Church, the other, a contradiction of the ordinance of the Lord. The heads of the Roman Catholic Church are perfectly aware of the truth of these assertions. Their present proceeding, is, therefore, an act of direct and purposed hostility towards us, since it

could not have been adventured on by them, except they had held, and had meant thereby to proclaim their persuasion, that we have no canonical Bishop, no Catholic Church, no such administration of the Holy Sacraments among us, as shall be effectual to everlasting salvation. The favourite and governing impression with the many you will find to be, that the matters in controversy might be adjusted by a tacit compact, or mutual connivance, according to which each should pursue its own measures without interference on the other part.

“ It will, therefore, be proper for me to explain to you, that we, at least, could neither propose nor accept such a compromise, which would make us parties in fact to the establishment of a permanent schism in the body of Christ's Church. It is not necessary, that I should enter very deeply into a statement of the grounds upon which we constantly proceed against the right of the Bishop of Rome to exercise jurisdiction within, or over any portion of the church beyond his own proper, actual and immediate Diocese and province; the range of which was determined by usage and canonical authority many centuries ago. But although such our denial of his supremacy be sufficiently known, yet, in order that advantage may not hereafter be taken of our silence under pretext that the present unfounded pretension to establish a metropolitan jurisdiction here, by the sole authority of the Bishop of Rome, was suffered to pass without contradic-

tion or remonstrance, I have held it my duty thus publicly to declare, in express terms, in the face of the church, that, beyond its own limits, the See of Rome possesses no right to establish bishopricks, or other offices of ecclesiastical order, in provinces of the church where they already subsist. No such prerogative, or privilege can be proved to belong to the Bishop of Rome, or to his See, either by virtue of any supposed succession or derivation from St. Peter, the first of the Apostles ; or of the authority direct or indirect of Holy Scripture ; or of the testimony of the early fathers ; or by the decree of any general council lawfully assembled, or through the mission of St. Augustin into Britain ; or by the laws and statutes of this realm ; or in any other manner, or by any plea of what nature soever.

“ Whatever widening of the unhappy separation which prevails, may be apprehended from the act, to which, after full and mature deliberation, I have subscribed, such a consequence, however, deplorable in itself, is not to be weighed in the balance against an apprehension of God's anger, which must fall upon us, if we should, through fear of man, engage in a weak and ineffectual attempt to maintain outward peace by surrendering the fundamental principle of Christian unity.

In my own name, therefore, as Bishop and ordinary pastor of the Diocese of Australia, and for my successors canonically entering, and in behalf

of the clergy and all the faithful within the same Church and Diocese of Australia, and also in the name and on behalf of my proper lawful superior, William, by Divine Providence, Lord Archbishop of Canterbury, Primate of all England and Metropolitan, and on behalf of his successors, I have entered my protest against the establishment of any archiepiscopal or episcopal See within this Diocese, except it be with the consent, first obtained, of the Church of England at large in convocation assembled.

“ In this entire proceeding, I have confined myself most strictly to the principles of ecclesiastical antiquity, by which it is clearly to our advantage to abide ; and, on behalf of the Church of England in Australia, I advance explicitly a claim to be considered the genuine representative of the early British church. It is my desire that nothing be done by us of strife, or vain glory; nothing with the design of wantonly provoking controversy, or for the mere purpose of magnifying our own pretensions. Let me hope that it will be found possible to shun both these improprieties, and the probability of it will be greater, if, while we express without disguise our views of Christian truth, we prove ourselves more sincere, more earnest, more uncorrupt, more humble-minded, exactly in proportion as we believe that God has vouchsafed to commit an ampler measure of it to our stewardship. I earnestly desire the benefit of your prayers for my support

under the present difficulties; and relying with perfect confidence on your fulfilment of this and every act of deference to your diocesan and of duty towards the church,

“ I remain,

“ Reverend Brother,

“ Your very faithful Servant,

“ WILLIAM G., Australia.”

The publication of these important documents called forth no little controversy. The newspapers were filled with letters on either side of the question, pamphlets also issued from the press, and the question as to the limit of the Bishop of Rome's jurisdiction, became a matter of dispute in almost every circle. The Rev. R. Allwood, A.B., Minister of St. James's, Sydney, delivered six valuable lectures at this period, in which he proved, that neither from the declarations direct or indirect of Holy Scripture, the testimony of the early Fathers, (whose writings he examined seriatim), the decrees of ancient councils, or from any other authority could the Bishop of Rome claim jurisdiction beyond his own See. We have dwelt upon the circumstances of this controversy at some length, as we feel convinced that the agitation of the subject will be of much real good to the interests of the Church of England in Australia. It will deter from further innovations, it will establish those who were before ignorant of the true principles of Pro-

testantism in the soundness of the doctrines of our church, and we may yet live to regard it as an instance in which Providence has allowed a temporary ill for the working of a great permanent good. Thus, as in all cases, "When the enemy cometh in like a flood, the spirit of the Lord lifteth up a standard against him." The Roman Catholic community have a large and beautiful church situate in Hyde Park. Its interior is a fine specimen of colonial architecture ; its altar is gorgeously bedecked with the usual accompaniments to their sacred edifices ; it has a large and excellent organ, and the music is generally performed by the chief talent in Sydney. This church is always crowded, and frequently many are seen kneeling around the walls of the church on the bare ground. Auxiliaries of the "Catholic Institute," and of the "Society for the propagation of the Faith," have been established within the last few years, and hold weekly meetings on the Sabbath evening. A new cathedral is now nearly completed to be called "St. Patrick's Cathedral." It is a chaste specimen of Gothic architecture, and forms no slight ornament to that part of the town in which it is situate. It will be seen from a subjoined copy of the last census in 1841, that Roman Catholics form a considerable part of the population.

We do not hear of many converts to the Romish faith from other denominations of professed Christians; yet, bound together as they are, and brought into constant communion with each other, and the excitement of continual meetings tending to confirm them in their principles, they lose none of their members, nor abate any of their zeal. In

addition to Dr. Polding, they numbered twenty eight clergymen in different parts of the colony at the commencement of 1843, and since that time nearly twenty others have arrived from Europe, either in full orders, or about to take the office of the ministry upon them at an early period.

The other body receiving state endowment is the Presbyterian, numbering thirteen thousand one hundred and fifty-three, with twenty-eight regular and occasional clergymen. The usefulness of this body has been much impeded by the unhappy dissensions which have sprung up among its members. These, it is to be hoped, are gradually subsiding, and this religious community may now unostentatiously proceed in its regular course of ministration, according to those forms to which they are attached. They possess two neat churches in Sydney, where the Rev. Dr. McGarvie and the Rev. Dr. Fullerton respectively officiate.

In returning to the Church of England in this important colony, we must make especial mention of his Lordship, the Bishop of Australia. Well might this zealous Diocesan in some degree apply to himself the language of the Apostle: — “In labours more abundant, in journeyings often, in perils of waters, in perils of robbers, in perils by mine own countrymen, in perils by the heathen, in perils in the city, in perils in the wilderness, in perils on the sea, in perils among false brethren, in weariness and painfulness, in watchings often ;

besides those things which are without, that which cometh upon me daily, the care of all the churches." Those who have written of the earlier state of this colony, have referred to the efforts of the present Bishop, when he was Archdeacon of Australia, this being then a part of the Diocese of Calcutta. Judge Burton, also, in his valuable work on "The Religion and Education of New South Wales," has referred to his Lordship's untiring zeal after his elevation to Episcopal honours. We may, *en passant*, recommend an attentive perusal of this volume to all who would know the religious state of our community up to the date of its issuing from the press. In this work, and in others containing the early history of the colony, deserved praise is paid to Archdeacon Scott, the venerable Marsden, Rev. Richard Hill, &c. The Rev. T. H. Scott was appointed Archdeacon in October, 1824, and by his continued and untiring labours and representations to the Home Government, did much at that time to rouse Christians at home and in the colony, to a sense of the actual religious wants of the people.

The Rev. S. Marsden, who, with a respectful affection, which is truly touching, is always termed "the *venerable* Marsden," arrived here in March, 1794; and, after visiting England, and using his best energies for the welfare of the Church, died in 1838, in a good old age, retiring, as a veteran soldier from the field, full of honour, and waiting

but to receive the crown from the Master he had served. The Bishop of Australia, in referring to him a short period after his death, says:—"his genuine piety, and natural force of understanding, I held in the highest esteem while he lived, and still retain them in sincerely affectionate remembrance."

The Rev. Richard Hill entered the colony in 1818, and laboured zealously till May 24th, 1836, when he died suddenly in the vestry of St. James's. A handsome monument is erected to his memory in the church. These and other excellent men, who "bore the burden and heat of the day," are embalmed in the affectionate memory of all those who knew them and witnessed their labours; and, although a detailed account of their exertions belongs more to the past than the present history of the Church, and is, therefore, omitted here, we could not, in respect to their memory, or in gratitude to the great head of the Church for raising up such instruments to effect His will, pass them by without this notice.

The Bishop of Australia, when in Sydney, always preaches once, more frequently twice, and on some occasions we have known him engage in three public services on the Lord's day. His tours into the country districts are frequent and laborious, often attended with considerable danger. Strong, however, in super-human strength, he proceeds on his hallowed mission, undaunted by any difficulties,

with the one object present to his thoughts and anxieties—the welfare of the Church, the glory of God. In the late Legislative Council, his Lordship laid the colonists under additional obligations. Here his talents always commanded respect, and his high character, in strict keeping with his holy functions, compelled those who differed always to admire. There was never on his part an assumption of authority, but his opinions and sentiments were always regarded with the deference due to a superior man : his rising was always a signal for attention, an attention always sustained throughout his addresses. In some Committees, especially the Immigration Committees, he rendered essential service. Especially in these last, (we quote from a speech of his Excellency Sir George Gipps) “ the weight of his Lordship’s opinions, the high respect in which his Lordship’s character was held at home, and his acknowledged eminent talents, had given to the reports which had emanated from the Immigration Committees, an importance and an influence which they might otherwise not have had.”

Having made this quotation, it is natural to refer to the occasion on which the Governor paid this compliment to the Bishop. The circumstances were these. When his Lordship was in London in 1836, he communicated to Lord Glenelg, then Secretary for the Colonies, his wish to be relieved in any future legislature from the duties attached

to a seat in the Council of the colony. Upon a Representative Legislature being granted to New South Wales, Lord Stanley, in a despatch to Sir George Gipps, dated September, 1842, thus writes : —“ I own that I entertain great doubts how far it may be advantageous to the colony, and to the interests of religion, that the Bishop should continue to hold a seat in a Council, thus, in part, popularly constituted ; but my sincere respect for the present Bishop, forbids my taking any steps in reference to him which should appear to intimate any slight upon him, and I am, therefore, prepared to leave this matter to his discretion, and to authorize you to appoint him to the Council or not, according to his own wish and feeling on the subject.”

This having been communicated to his Lordship by Sir George, the Bishop states : —“ that no reason has presented itself of sufficient weight to induce me to recede from the sentiments expressed in my letter to Lord Glenelg of the 20th of September, 1836, and repeated in conversation to your Excellency at Paramatta, soon after the beginning of the present year. I beg leave, with the utmost respect and deference, to decline the honour thus tendered by his Lordship to my acceptance ;” and he more fully declared his feeling in a speech delivered by him in Council on the last day of their Session, February 23rd, 1843. After repudiating what he very justly denominated “ the cant which

had been uttered upon the subject of the Bishops of the Church of England holding a seat in Parliament," he states, "that, if the duties he should be called to discharge, or the constitution of the Council itself had been virtually the same with what obtained in the House of Lords, he should be freed from his objection. His opinion he must strongly express to be, that the propriety of an ecclesiastic sitting in a legislative assembly, depended very much, or almost entirely upon the character of that assembly; or that it should be secured, as that Council had been, from that warmth and impetuosity of debate, which an elective legislative assembly must at times exhibit—indeed, he could go so far as to say, which within due bounds it even *ought* to exhibit; consequently, a person in his station, sitting in a Council of that nature, must either by his presence impose a check not desirable on freedom of speech, or he must witness and hear many things not suitable to the character he bore, or might be betrayed into alterations, or party feuds still more at variance with it. As matters stood here, he felt that if there were weakness or danger attending the cause of the Church, they must be met and removed by the members of the Church acquiring a truer acquaintance with its principles, and, by their manifesting their earnest adherence to them, rather than by any support which could be afforded by him holding a seat in the Legislative Council."

To the well-deserved eulogy which his Excel-

lency Sir George Gipps, on this occasion passed upon his Lordship, we have already referred. The Attorney-General (a Roman Catholic) in moving that the documents be printed, "was sure that he only echoed the wishes of the whole Council, who, together with the public at large, must respond to the expressions which had fallen from his Excellency respecting his Lordship, the Bishop, and unite with him in reverence for his character, and admiration of his high talents." Messrs. James and H. McArthur expressed similar sentiments, and the Attorney-General's motion was carried unanimously. Thus our excellent Diocesan has "good report of all men, and of the truth itself."

There are four Churches in Sydney, and at present one temporary place of worship. The Cathedral Church (*pro tempore*) is St. James's, capable of seating above fifteen hundred persons. Public service is held here three times on the Sabbath, and on all the fasts and festivals of our Church. Morning and evening prayers are also said every day. The service is performed in the spirit-stirring manner of the English Cathedrals.* In the morning, the Church is generally crowded, sometimes strangers are unable to find accommodation. The Governor and family (when in town), the

* The prayers, however, are not intoned, and metrical Psalmody has been introduced. The Litany also is said in the reading-desk, instead of at a faldstool, and the suffrages are not chaunted.

Commander of the Forces, the Chief Justice, and the highest colonial officers attend constantly. A gallery is also set apart for the convicts in Hyde Park Barracks, which are situate near the Church, and it has sometimes struck us that, if any thing can touch the hearts of these unhappy men, (and who shall say nothing can ?) it must be when in this land of their expatriation, weekly as the Sabbath returns, they hear all classes of the community in the great congregation joining in the beautiful prayer of our inimitable Liturgy : — “ That it may please Thee to show Thy pity upon all prisoners and captives.” In the afternoon, the congregation is considerably less ; in the evening the Church is always well attended. Judge Burton, in the work to which we have already referred, averages the three attendances thus : morning service, twelve hundred ; afternoon, five hundred ; evening, four hundred. At the present time, we should consider this to be nearer the truth :—morning service, fourteen hundred ; afternoon, five hundred ; evening, one thousand, in every case exclusive of the schools. The communion is celebrated every Sunday. It is difficult to estimate the precise number of communicants, as from the weekly observance of this sacred rite of our Holy Religion, the numbers are very variable. We may, however, regard them as being from one hundred and fifty to two hundred. We must not part from St. James’s without passing a deserved eulogy on the minister of this Church,

the Rev. R. Allwood, B.A., whose zealous labours and high character have insured for him universal respect. His pulpit talents are of no mean order, his doctrine clear and Scriptural, enforced by practical appeals to the consciences of his hearers.

He is assisted in his labours by the Rev. C. C. Kemp, a "literate," who has been ordained to the office of priest by the Bishop of Australia. It will be seen that the congregation in the afternoon is made to be little more than one third of the morning attendance. We cannot forbear expressing our strong disapprobation of the practice but too prevalent in Sydney of devoting the latter part of the Lord's Day to amusement and pleasure. Dinner parties, water or land excursions, and a thousand means are devised to "kill the time" of this sacred day, at least so soon as the morning service is closed. "These things ought not so to be." This is one of the evils which Englishmen, Protestant Englishmen, have but too readily copied from continental countries. We solemnly and conscientiously believe, that God prospers a nation much in proportion as his ordinances are obeyed and revered. He who from Sinai commanded "Remember the Sabbath day to keep it holy," excepted no part of that day, and it will not do to profess service and devotion to the great God who searches hearts and regulates motives, while the service is but half performed, while that devotion is confined

within the narrow limits of two hours a week. Well will it be if this evil receive a speedy check; we shall believe there is more "pure and undefiled religion" among us, when the sanctuary is more fully attended, not only when custom has made it fashionable, but rather when principle shall have made it binding.

In the year 1800, Governor Hunter laid the foundation stone of St. Philip's Church. Here the Rev. Dr. Cowper officiates, assisted by the Rev. John Elder. Of Dr. Cowper we can scarcely speak too highly. He arrived in the colony, August, 1808, and since that time has maintained his high character. All parties unite in admiration of his Christian zeal and holy devotion. Liberal without compromise, zealous without ostentation, he is ever about his master's business, and so engaged in his work that those who do not believe the message admire the messenger, and instances are not wanting of "fools who came to scoff," who have "remained to pray." An honorary Doctor's degree has been granted by his Grace the Archbishop of Canterbury to this excellent divine, and more honourable than that, he bears the high opinion of all classes of the community, and lives under the evident blessing of the great head of the church. Mr. Elder is a native of the colony, an alumnus of Dr. Cowper: he is zealous and sincere, and is always diligently employed in the service

of the church. There is something peculiarly interesting in St. Philip's Church. It much resembles some of our English old country churches, and it will accommodate nearly one thousand people. Here service is performed three times on

St. Philip's Church.

the Sunday to good congregations, and also on Thursday evening. The Holy Sacrament is administered monthly. The military attend this church, it being in the immediate vicinity of the barracks. There is much simplicity in the mode of conducting the service; the congregation is devout, and though there is not the outward attraction which prevails in other churches in Sydney, we have sometimes thought there is perhaps more inward devotion. Dr. Cowper has lately returned

from England, to which country he repaired for the recovery of his sight. The cure has been effected, and every well-wisher to the cause of true religion will join in the prayer, that he may long be spared to be increasingly a blessing to the church in Australia.

The parish of St. Lawrence has at present no church, but a large store has been placed at the disposal of the Bishop, by John Terry Hughes, Esq. This is, however, at present held merely on sufferance, and a handsome church is in course of erection for the parish. The Rev. W. H. Walsh is the zealous and talented minister of this parish. In his temporary church, service is performed each Sunday, and on the Fasts and Festivals of the church. There is much Christian zeal in this congregation. They are united with each other and with their pastor; their Sabbath schools are flourishing, as well as other religious societies. This church is always well attended, frequently crowded.

St. Andrew's parish has at present a neat place of worship, capable of accommodating five hundred people. The Rev. R. K. Sconce is the minister. This church was opened on Whit Sunday, 1842, and re-opened after enlargement on the Whit Sunday of 1843. Service is performed twice on the Lord's day. The system of free seats to the exclusion of pews is adopted in this, as in most

of the country churches lately erected. In this parish, and in the immediate neighbourhood of this place of worship, the intended cathedral is situate.

St. Andrew's Cathedral.

It will be a handsome addition to the architecture of the town. The want of funds has retarded the work, but we trust to be spared to see its completion, especially as four hundred pounds a year have been bequeathed to this purpose, and Christian churchmen in England have already aided us in this great undertaking. We should like to see greater liberality evinced by our fellow colonists in bringing to completion the first Cathedral Church in

Australia. Protestants would do well in this respect to learn a lesson from the Roman Catholic community, and emulate their zeal and liberality in perpetuating their worship and extending their principles.

At a distance of four miles from Sydney is the beautiful and romantic Church of St. Peter's, where the Rev. Dr. Steele statedly officiates. His congregation consists principally of those who, engaged in professional or commercial pursuits in the city, reside with their families in this delightful suburb.

The following is a list of the clergymen in the diocese of Australia, with their several districts.

Rev. W. Cowper, D.D., St. Philip, Sydney.

Rev. R. Cartwright, Burrowa.

Rev. John Cross, Port Macquarie.

Rev. F. Wilkinson, A.M., Oaks.

Rev. T. Hassall, Denbigh.

Rev. M. D. Meares, A.M., Wollongong.

Rev. C. P. N. Wilton, A.M., Newcastle.

Rev. J. Vincent, Castlereagh.

Rev. R. Forrest, Campbell Town.

Rev. H. T. Styles, Windsor.

Rev. G. K. Rusden, A.M., East Maitland.

Rev. W. M. Cowper, A.M., Port Stephens.

Rev. T. Sharpe, Bathurst.

Rev. H. H. Bobart, A.M., Paramatta.

Rev. J. Gunther, Wellington Valley.

Rev. G. A. Middleton, Morpeth.

Rev. W. Stack, A.B., West Maitland.

- Rev. G. N. Woodd, A.B., Bungonia.
Rev. W. Sowerby, Goulbourn.
Rev. T. C. Makinson, B.A., Mulgoa.
Rev. T. Steele, L.L.D., Cook's River.
Rev. J. Duffus, M.A., Liverpool.
Rev. C. F. Brigstocke, Liverpool.
Rev. G. C. Turner, S.C.L., Hunter's Hill.
Rev. C. Rogers, Brisbane Water.
Rev. H. D. D. Sparling, B.A., Appin.
Rev. E. Smith, B.A., Queenbeyan.
Rev. W. B. Clarke, M.A., St. Leonard's, N.
Shore.
Rev. R. T. Bolton, M.A., Hexham.
Rev. C. Spencer, M.A., Raymond Terrace.
Rev. J. Morse, M.A., Scone.
Rev. W. H. Walsh, St. Lawrence, Sydney.
Rev. J. J. Smith, Paterson.
Rev. R. Allwood, B.A., St. James, Sydney.
Rev. C. Woodward, B.C.L., Kelso.
Rev. J. Y. Wilson, Portland Bay.
Rev. E. G. Pryce, B.A., Lower Hawkesbury.
Rev. W. W. Simpson, M.A., Penal establish-
ment, Paramatta.
Rev. A. C. Thomson, Port Phillip.
Rev. G. Vidal, B.A., Sutton Forest.
Rev. J. Elder, Chaplain to H. M. Gaol, Darling-
hurst, Sydney.
Rev. T. B. Naylor, B.A., Norfolk Island.
Rev. C. C. Kemp, Master of St. James's Gram-
mar School, Sydney.

- Rev. J. C. Grylls, Holy Trinity, Sydney.
Rev. B. L. Watson, Penrith, and South Creek.
Rev. W. Stone, A.B., Ashfield and Concord.
Rev. J. Edmonstone, Chap. Penal establishments,
Sydney.
Rev. J. Troughton, Prospect.
Rev. R. K. Sconce, A.B., St. Andrew, Sydney.
Rev. T. W. Bodenham.
Rev. J. Gregor, A.M., Moreton Bay.
Rev. W. Lisle, Yass.
Rev. F. Cameron, Singleton.
Rev. J. M'Connell, Singleton.
Rev. J. Farrell, A.M., Adelaide, S. Australia.
Rev. J. B. Wittenom, Perth, Swan River.
Rev. J. R. Wollaston, Perth, Swan River.
Rev. W. Mitchell, Guilford, Swan River.
Rev. J. Allan, Braidwood, N. S. Wales.

The Rev. J. C. Grylls, officiated at St. Philip's during Dr. Cowper's visit to England, and preaches now in a temporary place of worship at the north end of the town, until a commodious church, which has been commenced, can be completed. It will be seen by the above list, that the spiritual interests of the convicts, at different penal establishments, are not neglected. The Rev. J. Edmonstone, and the Rev. J. Elder, are unremitting in their labours with these unhappy men in Sydney, and the Rev. W. W. Simpson is similarly engaged in Paramatta. Collections are made in all the

churches in Sydney every Sunday, for the raising of funds for building and enlarging churches in different parts of the colony. About £30 were formerly raised each Sunday, but in the present depressed state scarcely three-fourths of that sum is now contributed.*

On all occasions of public service the following form of prayer for the Governor, is employed: "Almighty God, from whom all power is derived, we humbly beseech Thee to bless thy servant, his Excellency, the Governor, of this Territory, and grant that he may use the authority which our Sovereign Lady, the Queen, hath committed into his hand, with justice and mercy, according to Thy will. Enlighten him with Thy grace, preserve him by Thy Providence, and encompass him with Thy favour, that he may do all things for the advancement of Thy glory, the good of Thy Church, the honour of her Sacred Majesty, and the welfare of this Territory and People. Grant this, O Merciful Father, for the sake of Jesus Christ, our only Redeemer and Advocate. Amen."

A slight alteration also is made in the prayer

* It is pleasing to be enabled to communicate the fact, that at this moment (February, 1, 1845), and for some time past, the free-will offerings of the people in the churches of Sydney alone, have averaged upwards of thirty pounds each Lord's Day.

for the High Court of Parliament, to render it suitable for the Legislative Council of the colony.

The question may be asked, "Is there much vital religion in the Church in Australia?" In proportion to the importance of this question is the difficulty of coming to a satisfactory conclusion respecting it. Mammon has been too much the God of our Idolatry in New South Wales. Persons have left their native land and voyaged to this distant colony, avowedly with the desire of making money. This desire, when under proper check, and when controlled by Christian principle, may be justifiable—nay, laudable; but it is a question of grave import, whether we have allowed this desire to creep even into our holy things, and to deaden those feelings of piety which the Christian ought ever to cherish. Our souls may sometimes rise, but is not their general tendency downwards? What is the current of our thoughts and feelings? Are we realizing our privilege, and acting in conformity with our high vocation? Does the Church in Australia carry out the Scripture representation of "a city set on a hill," "the light of the world?" Can our Pastors address us as St. Paul addressed the Corinthians?—"Do we begin again to commend ourselves, or need we, as some others, epistles of commendation to you, or letters of commendation from you? Ye are our epistle written in our hearts, known and read of all men; for-

asmuch as ye are manifestly declared to be the Epistle of Christ ministered by us, written, not with ink, but with the spirit of the living God; not in tables of stone, but in the fleshly tables of the heart." Are we like the Thessalonians, who were "ensamples to all that believe," and from whom "sounded out the word of the Lord, not only in Macedonia and Achaia, but also in every place their faith to God-ward was spread abroad?"

These are solemn questions. How far can we answer them satisfactorily? In some of the outward fruits of Christian zeal it is pleasing to find that we are advancing. We have already noticed the large attendance at our places of worship, and the liberal weekly collections. The formation of Parochial Associations for the purpose of extending the knowledge of the truth by the lay agency of the Church in every parish is an interesting and important feature in the late history of the Australian Church. The general feeling and tendency of the community is to respect religion and religious institutions; the Sabbath is observed with outward decency, and vice, though doubtless it does exist, does not unblushingly present itself to the public gaze. The public feeling is all on the side of the form of religion, how much of the power exists among us, the searcher of hearts alone can tell.

The Church of England Book Society, estab-

lished in 1841, under the sanction and presidency of the Bishop, is a useful auxiliary. The nucleus of a good library is already formed, and some valuable lectures have been delivered on different points of literature and science. By encouraging the perusal of standard theological works, and by occasional lectures on Church History and Government, we may hope that that end may be accomplished, to which the Bishop referred in his speech before the Legislative Council, already quoted ;—we mean, that “the members of the Church should acquire a truer acquaintance with its principles, and manifest their earnest adherence to them.”

With reference to our clergy generally, we must make one remark. Their work is too severe both for bodily and mental energies, and they are not adequately remunerated. The Church of England numbers we have seen seventy-three thousand seven hundred and twenty-seven members in the colony, and for these we have only sixty clergymen. The consequence of this is, that zealous as we believe our clergy are, it is impossible they can fully meet the pressing demands upon their time and labours. The public services of the sanctuary demand much of their time, and but little opportunity is left for that important part of a clergyman's work—systematic pastoral visitation, especially when the scattered state of the population is taken into consideration. Hence the pastor and people are scarcely ever brought

into collision, except on the Sabbath, or in public services. No wonder then if the people sink into formality, and learn to look upon religion as nothing more than an attendance upon church, and the heartless performance of a round of public services. The cry we send across the ocean that separates us from home is "come over and help us;" the earnest request we make to all who at home, or in the colony desire the welfare of the church is, "Pray the Lord of the harvest that He would send forth labourers unto His harvest." In some parts of the country, for miles round, there is no church, no minister; the inhabitants live without hope, and "without God in the world."

"The sound of the church-going bell,
These valleys and rocks never heard;
Never sighed at the sound of a knell,
Nor smiled when the Sabbath appeared."

In addition to the extremely onerous duties of our clergy, they are not adequately remunerated, and, "in order to provide things honest in the sight of all men," are frequently obliged to resort to the expedient of taking pupils. This occupies time which ought to be employed in the service of the church, disengages their attention, distracts them with worldly anxieties, and produces many other evils. It would be well if this could be remedied. We have no delicacy in speaking on

this point, and urging strongly a more liberal provision for our clergy, for “even so hath the Lord also ordained, that they who preach the Gospel, should live of the Gospel.” The Roman Catholic community have a far greater number of clergymen in proportion to their numbers than our own Church, as they have between forty and fifty among 35,690 ; and in this respect, as in others, we may learn from them valuable lessons.

We, therefore, hail with grateful satisfaction the plan proposed by Bishop Coleridge, of endowing a College for preparing young men for the Colonial Ministry, and shall be happy to find this project receiving that support and countenance in high quarters which its importance seems to claim. It is, however, only a certain class of men who are adapted for these colonies. In one word, they are sent forth “as sheep in the midst of wolves,” and must, therefore, “be wise as serpents, and harmless as doves.” They must be men of good education—sufficiently so, to command respect, especially versed in all points of doctrine, and in the History and Discipline of the Church.

This last point is of considerable importance: the members of the Church require to be thoroughly instructed in its principles, or other denominations will take advantage of their ignorance, to induce error and schism. Situated also as we are, at a considerable distance from our

parent Church in England, we lose the advantage which is enjoyed there. Matters which are fully canvassed at home, are but slightly examined here, and superficial views are the necessary consequence. Days are dawning on the Church in which mighty events are to transpire ; *we* must act our part in the movement about to take place, and it will require men armed at all points to regulate those movements, that they may be conducted with Christian wisdom and holy zeal.

There must be much wisdom in our colonial clergy to adapt themselves to the peculiar constitution of our society : they must “become all things to all men, that by all means they may gain some.” No better resolution could a clergyman take than that which St. Paul made, to “give none offence, neither to the Jews, nor to the Gentiles, nor to the Church of God ; even as I please all men in all things, not seeking mine own profit, but the profit of many, that they may be saved.” Men whose character is above reproach, whose minds are well disciplined by diligent study, and whose hearts are alive to the greatness of the work, who are yielding without compromise, wise without craft, firm without bigotry, and “in whom there is no guile,” are those whom we want. Will not some such come to us ? “Other men have laboured,” will they not “enter into their labours ?” Shall we look in vain to our British Universities for

some assistance? We ask not the sacrifice at their hands which is required from those who journey to heathen lands; and even if we did, is self-denial to be laid in the balance against being engaged in their Master's business, labouring in a new land, "and to come as far as to us also in preaching the Gospel of Christ?"

We feel convinced that some will respond to the call. It is an appeal from kinsmen according to the flesh, and separated though they be by sixteen thousand miles of ocean, they are brethren still. "The field is the world," and it is only when the uncultivated parts of the field are supplied with labourers, that it is allowed us to sit down contentedly where fertility has already commenced. We would not have the calls of England neglected. Her large towns and rural districts even now, we know, require more men, but we are ourselves part of England, and we ask the English Church to come to our help. Shall not many a Christian pastor say, "Here am I—send me." The lay members of the Church must, however, bear their part in strengthening the hands of the colonial clergy. By their purses, their exertion, and their influence, they may do much, and it is not a great thing, if these holy men, whom we hope to see among us, "sow unto us spiritual things, that they should reap our worldly things."

We have no Archdeacon in this Diocese. The appointment of one would be a valuable donation

to the Church, and a considerable relief to our over-taxed Bishop. We venture to make the suggestion, and should be gratified to find it receiving consideration. When the Church and the Church's Head call loudly for help, he is a traitor to her cause, and an enemy to her great Head, who resists not other calls to obey the summons.

We have allowed ourselves but a limited space to refer to the exertions of Dissenters from the Established Church. They number (including Wesleyan Methodists) about five thousand. The Wesleyans display the zeal here which characterizes their body in all parts of the world. They have three places of worship in Sydney, and twelve ministers in the colony. A handsome chapel has been recently completed, called the Wesleyan Centenary Chapel: its name sufficiently explains the circumstances of its erection. The dissensions which arose in this body at home some time ago, were felt here, and have caused some splitting of interests, and the opening of small chapels in different parts of the town. The congregations of the latter are almost exclusively of the lower order. In addition to their regular places of worship and ministers, the Wesleyans have many small chapels and local preachers, with other assistants, in different parts of the colony.

The Independents, or Congregationalists, have

a chapel in Sydney capable of accommodating about 500 persons. Here Dr. Ross, the agent and representative of the London Missionary Society, stately preaches.

Mr. Saunders is the minister of a neat chapel in connection with the Baptist denomination.

The "Friends" have a little meeting-house in Macquarie Street.

Dr. Lang, whose name is well known to those who have acquainted themselves much with the History of Australia, has, with his congregation, lately resigned the benefits of a State endowment, trusting entirely to what is called "the Voluntary Principle." His church is capable of seating one thousand persons, but is seldom more than half-filled. The Doctor has obtained a seat in the Representative Assembly, having been returned for the district of Port Phillip. It is not likely that he will thus render his own congregation larger, or be himself more influential in serving the religious interests of the colony, though we may hope that in his place in Council, he will not fail at all times to act up to his character as a minister of the Truth. This gentleman might have rendered far more efficient service to the cause of God in the colony, had not an unhappy love of political controversy drawn him aside from a course of devotedness to his work into other paths.

We have thus given a short view of the present

state of the religious communities among us. Before we proceed to some general remarks founded on the review we have taken, we proceed to extract from the Estimates for 1844, the probable expenses of the Church Establishments, forming a charge on the territory of New South Wales.

CHURCH OF ENGLAND.

SYDNEY.

	£	s.	d.
The Right Rev. the Lord Bishop of Australia	2,000	0	0
Forty-nine clergymen. — Two at £460 each, one at £350, seven at £250, twenty-eight at £200, seven at £150, and four at £100 per annum each.	10,070	0	0
Allowance in lieu of forage for one horse each to eight clergymen, at 2s. 6d. per day, each	366	0	0
Allowance for the maintenance of two boatmen on the River Hawkesbury.	36	10	0
Travelling expenses for clergymen on duty	250	0	0
Allowance for house rent to six clergymen. Five at £60 each, and one at £50 per annum.	350	0	0
	<hr/>		
	£13,072	10	0
	I 3		

PORT PHILLIP.

	£	s.	d.
Three clergymen, at £200, £150, and £100	450	0	0
Special grant for St. James's Church, Melbourne.	500	0	0
	<hr/>		
	£950	0	0

PRESBYTERIAN CHURCH.

SYDNEY.

Nineteen Ministers. Five at £200 each, nine at £150, and five at £100 per annum each.	2,850	0	0
Allowance for travelling expenses.	200	0	0
	<hr/>		
	£3,050	0	0

PORT PHILLIP.

Three ministers at £200, £150, and £100	£450	0	0

CHURCH OF ROME.

SYDNEY.

	£	s.	d.
The Most Reverend the Vicar Apostolic	500	0	0
The Very Reverend the Vicar General	200	0	0
Twenty-one clergymen. Fifteen at £200 each, three at £150 each, and three at £100 each .	3,750	0	0
Allowances for travelling expenses.	200	0	0
	<hr/>		
	£4,650	0	0

PORT PHILLIP.

Two clergymen at £200, and one at £150 per annum	350	0	0
	<hr/>		
	£5,000	0	0
To meet the expense of inspecting churches and ministers' dwellings	250	0	0
To meet unforeseen demands to which the government is pledged under the Church Act, including the building of churches of all denominations, and salaries of clergymen who may arrive in the colony with permission of the Secretary of State	12,000	0	0
	<hr/>		
Total	£36,220	10	0

	£	s.	d.
Deduct amount provided for by Schedule C. of 5 & 6 Victoria, Cap. 76	30,000	0	0
Amount proposed to be appro- priated	£6,022	10	0

This account calls for no remark, unless it be the large sum of £5,000, which a Protestant government pays for, what is believed to be, a false faith. Surely there needs some consideration here. Are not the principles of the Roman Catholic Church what they always were? And shall a government, calling itself Protestant and Christian, lavish such sums on the dissemination of these principles? We must speak out. Truth and consistency require it at our hands. The suspicion of bigotry and uncharitableness must not blind our eyes to the anomalous legislation which supports alike truth and error. If it be bigotry to protest against such an appropriation of public money, bigoted we are contented to be; but while we feel, and would readily display all Christian Charity towards those from whom we differ, principle must not be sacrificed: the points of difference between us are too great, too vital, to admit of compromise, or justify concession. “Doth a fountain send forth at the same place sweet waters and bitter?” Shall a government, with one hand, support the Ministers of God’s Holy word, and with the other, cherish and

uphold a system which seals that same book, and garbles its most precious truths? If our Protestantism be worth any thing, it is worth every thing. The tendency and disposition of the Church against which we set ourselves, is to *encroach*, and when we know that the encroachment, if commenced, would tend to the upturning of our dearest and most cherished principles, we tremble at that which might, by possibility, lead to such a result. Let our government cease to call itself Protestant, or let it cease to contradict its name by its Colonial policy. On these high points we must be consistent, if we would prosper.

The government in our colony offers, in the event of a Church being required in any parish, to grant a sum equal to that raised by private contribution, provided it do not exceed a certain amount. Many churches have lately been built in this manner in thickly-peopled districts of the interior, and soon we may hope to see many more.

We must not close, without referring to the establishment of two bishoprics in the Southern Hemisphere,—one in New Zealand; the other in Van Diemen's Land. His Lordship, the Bishop of New Zealand, stayed for a short time among us on his way to his Diocese in April, 1841. His heart seemed fully impressed with the importance of his work, and he is evidently ready to “spend and be spent” in his master's service. Accounts reach us in Sydney of his zealous labours, as well as of the

exertions of his clergy. How pleasing to consider that, at the antipodes of Britain, where, but a few years before, was nothing but savage and cannibal barbarism,—which barbarism is not completely softened yet,—that here not only is civilization advancing, but christianity is exercising its heavenly influences ; our ministry is constantly labouring, an Episcopal See is formed, the services of our Church are regularly celebrated, and the Divine command is now being fulfilled : “ Bring my sons from far, and my daughters from the ends of the earth.” The Bishop of Tasmania has but lately arrived at the scene of his labours, and was received with due respect by the clergy and members of his Diocese. We trust the formation of these Episcopal Sees will cause our Church to “ strengthen her cords, and lengthen her stakes.” May these dignitaries of the Church receive from the Church’s Head all wisdom, grace, and strength ! May their master who sent them forth, cheer them now they are in their labours ! “ Let thy work appear unto thy servants, and thy glory unto their children, and let the beauty of the Lord our God be upon them, and establish thou the work of their hands upon them, yea, the work of their hands establish thou it !”

We have lately been much gratified by a visit from the Bishop of Tasmania, who came to spend a short time with our own Bishop, and, doubtless, to consult with him concerning the common good. We repeat it, that we were much gratified with

this visit. The Bishop is very young for so grave an office; but we feel assured that a sound discretion has been exercised in sending out a man in the prime of life, to combat difficulties of no ordinary magnitude, and to undergo labours to which a person in the decline of years would be obviously unequal. In a former part of this chapter we have given a view of the principal Church of Sydney (St. James's); annexed will be found the

Cathedral of St. David (Hobart Town)

present Cathedral of Hobart Town. The difference between these buildings is striking. The one

looks like the church of a large old town, the other, is beautifully and romantically situate, and seems as though it were in a quiet country township: it is, however, neatly, nay, elegantly fitted up within, which it owes, in no small degree, to the good taste of the senior chaplain, the Rev. Dr. Bedford. We look forward, with pleasing anticipations, to the first triennial meeting of the Bishops to be held in Sydney. It will be a scene, we confidently hope, of unusual interest, bringing us back to the best days of the church. Christians at home will surely not forget those who have thus left their shores to become foster-fathers of the churches which are formed in these far-off southern lands.

We have one more duty to perform, which is, to return the thanks of the Church here to those Venerable Societies in England which have frequently rendered us valuable and seasonable aid. We tender them our best acknowledgments for these Acts of Christian liberality. May they be abundantly rewarded. While we return our best thanks for this assistance, we present our claim for further help. Still "many perish for lack of knowledge;" still we are, in our means of religious instruction, far below what a British colony should be. Our wants are pressing, and assistance we must have. Nature smiles on us; our soil is productive; our climate is genial; commerce, though subject at times to depression, promises yet to advance; and if we be but a religious, we shall, assuredly, be a prosperous, a

happy people. When thus we are arrayed in the beauty of holiness, all our natural charms will be more charming still. How redolent of fragrance will be our plains, when "the plant of renown," the "Rose of Sharon," blooms beautifully in our land ! How smooth and peaceful will be our streams, when they move, like Bethesda's pool, to heal and refresh the weary and sin-sick soul ! With what unwonted lustre will our firmament shine, when the mystic star leads to Jesus, and when the southern cross directs the gazer to the Lamb that has been slain ! How resplendent will shine the orb of day, when unto us "the Sun of Righteousness shall arise with healing on his wings !" What sweet warblings shall those be, when the burden we hear is, "Glory to God in the highest, on earth peace, good will to men ! And this shall come to pass. Eternal Truth is pledged to accomplish it ; Omnipotence undertakes the work, infinite love "willeth not that any should perish ;" perfect Holiness hates sin, and desires Holiness to dwell in the land. Every attribute of the Triune God is pledged to accomplish the work. And have we nothing to do ? Nothing to do ! We may be sluggish if we will,—God needs not our instrumentality ;—others can do his work ; but,—if we labour not, let us beware, lest against us the ancient doom be again pronounced, "Curse ye Meroz, curse ye bitterly the inhabitants thereof ; because they came not to the help of the Lord against the mighty."

Let us, however, act up to our high privilege, let Britain understand her duty, and with hallowed zeal extend to the nations of the earth, the Gospel which has raised her to the position she occupies among the nations of the world, and she shall see how by blessing others, she will herself be blessed,—how the best means to obtain revival at home is by diffusing religion abroad. It is not more true that the soil is fruitful to minister to man's necessities, that the sea flows to bear on its billows the ministers of a nation's prosperity, diffusing commerce and its attendant blessings over the earth, that the sun shines in the firmament not for itself, but to cheer, gladden and render fruitful the earth, than it is the will of God, that the Gospel has been committed to the church, that she may distribute it to others, and thus receive back fresh blessings to herself. The church is put in trust with the Gospel—to betray that trust is disaster to herself and dishonour to her head; to fulfil her trust, is to bless the world and to be prosperous herself; it is to perform the injunction, and finally to share the reward, comprised in those spirit-stirring words: "Be thou faithful unto death, and I will give thee a crown of life."

CHAPTER IV.

COLONIAL EDUCATION.

THOUGH the educational character of Australia has not yet arrived at that eminence, which by this time it should have occupied, it is still considerably in advance of former years. Some causes which impeded the progress of this good work have either entirely ceased, or their operation is far less powerful. When the communication with England was less frequent and less regular than at present, the want of proper school-books was a serious draw-back. This evil is quickly passing away. Nor did we fail less from the want of competent teachers. Now we have some men of high standing, who have earned honours at the British and Foreign Universities, engaged in the noble work of education, — engaged in conferring that boon upon the State which we know to be invaluable. Still, however, we are not in our education what we ought to be. The unhappy rise of religious dissension (the worst, and generally, alas! the bitterest, of all dissensions) has

prevented much good which might otherwise have been effected, has divided interests which ought to have been united, has given an excuse for supineness to that government which should have been roused by "the pressure from without" to afford the cause every assistance, has kept in a state of ignorance, "perishing for lack of knowledge," a great mass of the community which should now be rejoicing in all the blessings of a wide-spread education. Would that an honourable truce could be proclaimed to all such disputings ! There is every reason to induce the well-wisher to Australia to exert all his energies in the work of colonial education. We assert without fear of contradiction, that in no British dependency is a greater field laid open ready to reward the industry and application of the persevering scholar. The man of literature and science may find here abundant materials on which to employ speculation and research. Shall we name such materials ? Let these suffice. All that connects itself with the interesting Aborigines of this land, the history of our colony, its opening resources, its future prospects. But in addition to the subjects thus formed ready to his hand, who can tell what an important part may be assigned to the colonial youth in the after history of the world. The man of learning is the true "citizen of the world," and ample as are the materials we have stated, we will not confine our young Australian literati within such narrow bounds. Those

fruits which the tree of knowledge bears on their own soil, we may, indeed, wish them first to pluck, but we will not refuse their gathering it wherever it is planted. And to this they are fully competent. On a careful examination for the last ten years of the mental character and habits, the intellectual calibre of Australian born youth, we know that they will stand high, very high. They are naturally shrewd, quick-sighted, enthusiastic in their temperament, ready to receive, if not always faithful to retain, impressions. If they want the plodding industry of the German scholar, they possess the bold intrepidity of the true English character. If they be not the Fabii who achieve victory by unwearied diligence and perseverance in continued skirmishes, they are the Buonapartes of modern times, whom difficulties serve only to arouse, and who, concentrating their energies on one point, resolve to conquer, and conquer, because they resolve. Roused by a stimulant they will labour with untiring zeal, *but they require that stimulant*. They will seldom pursue learning for learning's sake; they require an appeal to their interest, they need the recommendation of profit and advantage, but when that is once fairly presented to them, they overcome difficulties in a short time which others would be long in surmounting. We have dwelt thus on the character of our colonial youth, as we intend, before we close, to graft on

the view thus presented, an appeal to the friends of education in the colony and at home. With abundant materials on which to work, with every thing to urge to exertion, let a movement be made by which our native youth shall receive the legitimate development of their powers, and the resources of our growingly interesting colony shall thus be increasingly brought to light.

A strong opposition was made by the Lord Bishop of Australia in his seat in council to a plan propounded by his Excellency, Sir G. Gipps, for introducing a general system of education.

“ The great dispersion of the population of New South Wales,” observes his Excellency, “ renders perhaps more than in any country upon earth, a system of education necessary that shall be as comprehensive as possible.” Against this comprehensiveness, his Lordship protested in an elaborate speech. On whichever side the friends of education may respectively arrange themselves, it must always be a matter of regret that the work has been retarded so long, and that no attempt to agitate the subject has been successful, as the evil genius of discord has stopped all attempts, paralysed all energies, and caused us to be now no farther advanced in national education than we were five or six years ago. The late Governor, Sir Richard Bourke, was distinguished for a strong attachment to education, and during his vice-regal

sway, materially contributed to promote its interests. On a statue erected to his honour by the inhabitants of the colony, the following among other eulogiums, stands prominently forward : “ he established religious equality on a just and firm basis, and sought to provide for all, without distinction of sect, a sound and adequate system of National Education.”

In 1836, his Excellency proposed a plan formed after the model of the schools about that time introduced into Ireland by the British government. Against this protests were presented by Protestants assembled in public meeting. The plan, however, worked for some time with slight modifications. We have referred already to the present Governor’s minute on this subject, as made public in 1839. Sir George Gipps expressed in this a strong approval of the principle of the British and Foreign School Society. A branch of this institution for some time had existence in Sydney, of which his Excellency was patron, and some of the most respectable and influential of the community were among its supporters and conductors. It failed, however, for want of funds and sufficient encouragement—a sad proof of the apathy of the colonists to this all-important matter. When will the people learn to regard education as the best support, security, and ornament of the State ?

The principle on which schools now receive aid

from the government, was fixed in September, 1841. By the regulations then issued, it was appointed that government should pay one halfpenny per day for each child educated in schools situate in towns whose population was two thousand or more. This, however, was not to be granted if the school was not found, on examination, to be in need of such help. Where the population was less than two thousand, one farthing or one halfpenny was to be granted, if no other school within five miles received government aid. In no case, however, was more than £25 a quarter to be appropriated to one school. No *fixed* salaries were to be allowed to masters, and the whole of the establishments were to be under the direction of inspectors, who were not to interfere with the internal management. In the year 1842, the charge for schools upon the Colonial Government was as follows:—

	£.	s.	d.
Church of England	8,601	15	9
Presbyterian	967	1	5 $\frac{1}{4}$
Wesleyan	280	2	6
Independent	22	7	6
British & Foreign School Society	300	0	0
Roman Catholics	2,500	2	7
	<hr/>		
	£12,671	9	9 $\frac{1}{4}$

The estimates for 1844, differ, it will be seen, materially in some items :—

	£.	s.	d.
Orphan Establishments, Episcopal			
and Roman Catholic	6,200	12	0
Church of England	3,450	0	0
Presbyterian	1,200	0	0
Wesleyan Methodist	350	0	0
Roman Catholic	2,450	0	0
For Schools of all denominations			
at Port Phillip	400	0	0
	<hr/>		
	£14,050	12	0

In all cases, the sum granted by government is made equal to that raised from private sources. It is difficult to obtain an exact account of the number of children attending the schools of the colony, in consequence of continual fluctuations. The number of schools are as follows :—

Church of England	42
(Of these twenty-seven receive support from the Diocesan Committee, and fifteen from government.)	
Wesleyan Methodists (Day Schools) .	14
„ „ (Sunday ditto) .	21
Presbyterian	14
Roman Catholic	28

When the sum of £14,050. 12s., granted for education, (of which upwards of £6,000 is appropriated to the Orphan School, and can hardly be said to belong, at least, as a whole, to education) is contrasted with the £60,548. 3s. laid apart for police establishments, we cannot avoid expressing a wish that more were spent to prevent than to punish crime, that the expensive paraphernalia connected with the administration of discipline to offenders were displaced, and their place supplied by the unostentatious but powerful machinery of well-regulated schools. These schools will never be so useful as they might, till more care is taken in selecting suitable masters. They should be men of unimpeachable character, intelligence, persevering industry, and respectable attainments.

It is allowed on all hands that nothing can be of greater importance than the character, skill, and attainments of the teacher of youth: the eternal, no less than the temporal, welfare of our offspring depends in a degree on the right use, or the abuse of the mighty engine which he wields—on the impressions he makes on the tender mind. Though the truth of this position be not opposed, it is somewhat strange that the scholastic is the only profession in which we require no guarantee of the fitness of the party. True, you may say, is not a member of a learned University a fit teacher? We

reply, certainly not, if it be *merely* on that account. How often do we see learned pedants coming thence; how very frequently men who cannot impart instruction in an easy and familiar manner. We remember in years gone by, requiring aid in our own mathematical studies when at the University, and that we had the assistance of a man highly extolled as a private tutor—a Wrangler of high degree. Little or no good did we derive from his deep, though well-meant explanations; he was not aware of the little difficulties which required to be pointed out, or of the imperceptible steps by which a pupil should be lured on, and his path cleared before him. No! to him all seemed as clear as the noon-day, and he went on with prodigious strides, continually forgetting that, however anxious, we could only trot after him, like Iulus of old, but could not keep up with him. We found that nearly all those difficulties which stand at the threshold of mathematical science were made quite plain before us by the assistance of a man, who took a low, though respectable degree, and who, being a “plodder” himself, knew what had opposed his own progress, and pointed it out with clearness. As in our own case, so in all: much, very much, depends upon the teacher himself. The greater portion of those who take a dislike to science, have done so because they only commenced their studies under such unfavourable circumstances, and, finding

them uninteresting and difficult, even with what are falsely called "superior advantages," they never troubled themselves farther about them, or entertained a strong disgust.

Many men are quite unfit, from the natural irritability of their tempers, to be teachers of youth, and a vast number from actual ignorance. The professional man who has not succeeded in his calling, the lawyer's clerk, the book-keeper, the tradesman, and, often those whose sole recommendation consists in their ability to "read, and write, and cast accounts," when all trades fail, and the world seems to cast its back upon them, these, forsooth, in crowds, set up as teachers of youth, "as Masters of Classical and Commercial Academies for young gentlemen."

I fear that honesty will not allow me to except ladies from this sweeping censure; nay, in some things they are really worse than men. Hence arises all the quackery we hear of and see in education; hence we find children superficially brought forward to know every thing by name, and much by rote, without their minds having gone through any wholesome discipline, putting us in mind of a building which is sightly to the eye, and is only deficient in one point—in wanting a foundation. Shall we, when our body is ailing, inquire with scrupulous care about our physicians, must they produce testimonials from

learned bodies, and must the world pronounce that their success in practice has been equal to their professions, before we call them in to our houses, to minister to our bodily ailments, and shall we not consider it of equal, nay, of greater importance, that the man who is to take charge of our children from their earliest days, whose peculiar office and high privilege it is to train their infant hearts in the way of God's commandments, and to furnish their minds with that knowledge which is more precious than rubies, or aught this world can bestow, shall be "apt to teach," and an ensample unto all men of godly life and conversation? We knew ourselves of a person who had a large school, (about one hundred pupils), on high terms in one of the colonies, who had been a prisoner, and was a professed votary of Bacchus.

Let our teachers of high or of low degree go through a regular apprenticeship; let their certificates prove their ability and skill in imparting instruction; and let those under whose inspection they have been, testify to the purity of their lives, or let them not venture to obtrude themselves into an office for which they must be glaringly unfit. Why not establish in this Hemisphere some training school, under the charge of a really clever, practical, and good man, to whose recommendation, we as parents may look up, and

feel, amid all the cares to which life is heir, that on this head, at least, we are free, that our children are likely to grow up a blessing to us, a credit to themselves, and an ornament to their country.

We were glad to find that in the minute of Sir George Gipps, published in 1839, his Excellency expressed his admiration of the system of Normal Training Schools. It would be of incalculable benefit to the colony if such institutions were introduced here. Surely the profession of the teacher, second to none but the sacred office of the ministry, requires as diligent training for the fit discharge of its high functions as those, to prepare for which we are accustomed to devote some of our best years. We have also another suggestion to make. Would not the introduction of singing, as a part of instruction, be highly desirable? This plan is pursued with great success and benefit on the continent, and we should hail its adoption among us as a national benefit. The influence upon the moral character, we believe would be considerable. Those who have but slender mental resources, and to whom consequently time is a burden, would, were this pleasing science generally taught, no longer seek relaxation in the evils of the low tavern, or gambling house, but would learn to pursue elevated joys befitting the intellectual being, the accountable creature of God. Addison has wisely called

Music a "sixth sense." How great a boon then do we confer by communicating the power of enjoying it! We might hope to realize the best results, and hear from even children the "Lord's songs in a strange land." Much is expected of the Representative Assembly in this general matter: let not the numbers who are yet uneducated appeal for their help and commiseration in vain.

We now proceed to the schools for the middle and higher classes of society. We may state generally, that the condition of some of these is highly respectable, and that if only government would, in its measure, hold out some encouragement, we should have but little left for us to wish, and surely it is not too much for us to ask such help.

The King's School at Paramatta was opened on February 13, 1832, under the superintendence of the Rev. R. Forrest, A.M. The whole establishment was placed under the direction of Archdeacon Broughton, now the Lord Bishop of Australia. This institution continued to flourish till the year 1837, when the Rev. R. Forrest resigned his appointment. At this time, in addition to the Principal, there were three assistant masters, and the scholars consisted of one hundred and twenty boys. The Rev. W. B. Clarke, A.M., in conjunction with the Rev. J. Troughton, then took the superintendence: they were succeeded

by the Rev. W. W. Simpson, and at present the Rev. J. Walker, A.M. is Head-Master. The building, appropriated to the King's School is admirably adapted to the purpose.

Paramatta is a small town, distant fifteen miles from Sydney, and the school is situate a little out of the town. It possesses every accommodation, is surrounded by good grounds, and is an object of admiration for the chasteness and correctness of its architecture. It is with pain we have to record that this establishment is now at a very low ebb, not more than about six or eight boys enjoying the advantages it affords. It may be difficult to account for this: whether it may have arisen from the fact that those who have been entrusted with its control have been too much occupied with clerical and other duties to enable them to devote undivided attention to their pupils; whether they have failed in "an aptness to teach," which, as we have elsewhere stated, is quite distinct from, and by no means necessarily connected with, superior attainments; whether its exclusive character, (it being under the direct surveillance of the Bishop and clergy) has operated to its injury, or whatever other cause may be assigned for its decline, that it has declined is certain, and is to be regretted.

As we are speaking of Paramatta, we present here a view of the Church in that township,

which, for so many years, was adorned by the ministrations of the Venerable Marsden.

St. John's Church.

A school in Sydney is now conducted by the Rev. C. Kemp, in which boys receive instruction. It is hoped, that in process of time, this establishment will constitute an important feature in our educational character. At present the attainments of the pupils are by no means extended, being confined to the elements of the classics. A neat and commodious building near St. James's Church is appropriated to this Academy, and the general direction of its affairs is placed in the hands of the Bishop of Australia, and the clergy of Sydney.

The Australian College was founded by Dr. Lang, then the Senior Presbyterian Chaplain in

the colony. It was intended to establish on the foundation of a good school, a College for supplying the Presbyterian ministry in the colony. In the years 1838—1840, the institution numbered about seventy or eighty pupils, and was conducted by the Rev. T. Aitken, A.M., Rev. D. McKenzie, A.M., and Rev. R. Wylde, A.M. From this time, however, the Australian College has sadly declined, till it is now very nearly defunct. The cause of this has been attributed to the fact that some of the conductors of this establishment were engaged so deeply in pastoral and agricultural pursuits, that their duties were necessarily neglected, or entrusted to those who were but ill-fitted rightly to perform them. An unhappy animosity, which has been excited, by and against Dr. Lang, has doubtless operated greatly to the injury of the school. This should have been an useful auxiliary in the great work of education, but its decline and dissolution affords a melancholy instance how completely powerless and valueless are all attempts to spread the blessings of education, when those on whom the work devolves have other objects present to their consideration, to which this work is considered as subservient, instead of being viewed as it should—paramount to all besides.

Many private schools have been established in Sydney, at different parts of the colony, by men of respectable attainments and character. The oldest

established, and one of the most flourishing of these is called the Normal Institution, conducted by Mr. H. Gordon. Among the pupils on this establishment was an interesting and intelligent Aboriginal native youth, placed here by the liberality of a private gentleman in the interior. This youth displayed considerable shrewdness and quickness, and in some degree repaid his patron's generous kindness.

The system of private tuition is pursued to a considerable extent, especially in remote parts. We confess we do not, as a general rule, admire private tuition for boys; we think they need the discipline of schools, they require that collision with others, which will prepare them for those fiercer collisions which they must inevitably endure when once they venture abroad on the world. It requires, we are of opinion, only a greater degree of confidence in our schools, and in their conductors, to induce parents to entrust their sons willingly to the charge of those who are honourably engaged in the direction of public or private seminaries.

The Sydney College was the first public school founded in the colony, and ranks, at the present time, as the most prosperous in the community. It was opened on the 19th January, 1835, with seventy pupils, who had formed the school of W. T. Cape, Esq., who was appointed Head-Master to this Institution, and whom his pupils were happy to follow. The foundation of the College is proprietary; the sum necessary for its establishment

having been raised in shares of £50 each. At the present time, one hundred and forty-four of these

Sydney College.

shares have been paid in full. A shareholder is allowed for each share to have one boy in the College, to receive all the benefit of the classes for £7. per annum. The terms for those not presented are from £12 to £14 a year, according to the age and advancement of the pupil. All the requisite stationery is supplied to the students at the expense of the Institution. Its management is entrusted to a President, Treasurer, Secretary, and Committee of fifteen, yearly elected by the Shareholders. The educational department is conducted by the Head-Master, and generally five assistant Masters. The average number of students has, for some time past, been about one hundred and fifty. By the statutes of the Institution, the course of education comprehends :

I. The Latin and Greek languages.

II. English grammar, Elocution, and the elements of English composition.

III. Writing, Arithmetic, Book-keeping and Geography.

IV. Mathematics, and such branches of Natural Philosophy as may be deemed of primary importance.

The land on which the College is built was a grant from Sir Thomas Brisbane, then Governor of the colony. The hall is, at present, the largest room in New South Wales, having contained at public meetings held within its walls from one thousand to twelve hundred persons ; it is eighty feet long by thirty-five. At the northern end, a very beautiful likeness of Sir Francis Forbes, the late President, is suspended. Attached to the hall is a most commodious house for the Principal, who receives boarders, and when the other wing is completed, similar accommodations will be provided for the Assistant Masters. Above the front entrance to the hall is the following inscription :

Ausp. Tho. Brisbane Equit.

Collegium Sydneiense

Pro Lit. et Art. Lib. Studiis

Civium Australicorum Curâ

Institutum.

Fras. Forbes Capit. Justic. Coll. Præs.

Ric. Bourke. Territ. Gubern.

MDCCCXXXII.

R. COOPER, Œdific.

E. HALLEN, Arch.

We must not refer to this Institution without awarding the honour which is eminently due to the gentleman whom we have already named as its first Head-Master. Mr. Cape, beginning with but a small number of pupils, having to contend with difficulties of no ordinary kind, pursued with unwearied diligence and ever vigilant zeal, the course which was laid down for him, and by acting thus, so succeeded, that he raised the Institution to an honourable position in the colony, won for himself the good opinions of all classes as a teacher, secured the grateful attachment of his pupils, who on his retirement from office at Christmas 1841, presented him with a substantial proof of their attachment, a handsome service of plate, and rendered his name well deserving a place in the historic record which would trace and unfold Australia's advancement.

Soon after my appointment to the Head-Mastership, which took place in 1841, I announced my intention of proposing Exhibitions to the pupils of the College, and soon many youthful competitors pressed forward to avail themselves of the privileges thus placed within their reach. Some months previous, notice having been given, the first Examination took place on the 3rd and 4th November, 1842, the Examiners being T. Walker, B.A., Jesus College, Cambridge, and H. I. Hatch, B.A., of Magdalen College.

The following were the subjects :

In lit. Human.

CLASSIS I.

Euripidis Orestes. Juvenalis Sat. XIII.

Thucydides Lib. I. Taciti Agricola.

Epis. ad Romanos (Græcè).

Latin Prose—Subject :

“ Cinis et manes, et fabula fies,
Vive memor lethi : fugit hora.”

English Essay—Subject :

“ Non possidentem multa vocaveris
Rectè beatum ; rectius occupat
Nomen beati, qui Deorum
Muneribus sapienter uti
Duramque callet pauperum pati
Pejusque leto flagitium timet.”

CLASSIS II.

Virgilii Æneis, Lib. I. II.

Cæsar's Comment. Lib. I. II.

Geography and History of Rome, ad lib.

English Poetry—Subject :

“ The miseries of War contrasted with the blessings of Peace.”

English Prose—subject :

“ The duties and privileges of the young.”

In Rebus Mathemat :

CLASSIS I.

First six books, and the eleventh book of Euclid.
Geometrical Deductions.

Snowball's Plane Trigonometry.

Problems in Simple, Quadratic, Cubic and Biquadratic equations.

The Binomial Theorem. Extraction of Binomial Surds; Ratios, Proportions, Chapter on variable Quantities, Permutations and Combinations, Logarithms.

CLASSIS II.

First three books of Euclid.

Problems in Algebra to the end of Quadratic equations.

Questions in Arithmetic, ad libitum.

A sum of fifty pounds was devoted to the exhibitions, to be awarded in prizes of £25, £11, £8, and £6. For the first class, two candidates presented themselves, and for the second, seven. The Examiners appended the following remarks to their Report: "The Examiners avail themselves of this opportunity of expressing their highest approbation of the manner in which the several candidates (more especially those of the first class) have passed this their first examination. The plan of the Examination was similar to that adopted at the

Universities of Cambridge and Oxford; and the result has enabled them to state with pleasure their belief, that few boys, at the same age, could be found in England, who could have passed through the same examinations with greater credit, either to themselves, or those under whose guidance they have been placed, than Stephen and Wentworth, (the candidates in the first class); and, indeed, the papers handed up by the candidates in general, are, in themselves, sufficient evidence of the very beneficial effect of a proper encouragement of voluntary study among the youths of this colony; and the Examiners would express a hope that the present laudable endeavours of the Head-Master in this kind, will be, on a future occasion, seconded by all parents and others who feel interested in the education of those youths, upon whose present habits of application and industry the prosperity of this country may hereafter greatly depend."

The following subjects were selected for the second year's Exhibition:—

In Lit: Human:

Sophoclis Antigone. (In connection with this play, Seale on the Greek metres must be brought up). Demosthenis Philippica I. Livii Lib. I. Horatii de Arte Poeticâ. Logic.

Paley's Evidences of the Christian Religion.

Latin Verses. Subject: 1. Paraphrase on the 23rd Psalm; "The Lord my pasture shall pre-

pare." 2. Chorus in Euripidis Medea, l. 414—443. These are to be turned into any of the Horatian metres.

English Theme. Subject: "Vivè Pius, moriere Felix."

English Verse. Subject: "Amor patriæ."

CLASSIS II.

C. Salustii Catilina. Horatii Od: Lib. I. II.

Copy of Latin Hexameters and Pentameters: Subject—"Non benè cœlestes impia dextra colit."

English Theme—Subject:

Dare to be true, nothing can need a lie:

The fault that needs it most, grows two thereby."

English Verse. Subject: "Rural Pursuits."

In Rebus Mathemat:

CLASSIS I.

Algebraical Problems, ad libitum.

Plane and Solid Geometry, Snowball's Plane and Spherical Trigonometry; Conic Sections; Mechanics. Use of the Globes. The different modes of the projection of the Sphere.

CLASSIS II.

Questions on Arithmetic, ad libitum. First Six Books of Euclid. Algebra, including Simple,

Quadratic, Cubic and Indeterminate equations.
Mensuration.

It will be seen from the above, that the attainments of the youths at Sydney College are very respectable, and that the institution would stand well on a comparison with older and more favoured establishments at home. There is something very interesting in the stimulus which such inducements to learning present to the youthful mind. We feel disposed to hail with all enthusiasm into the arena these juvenile intellectual gladiators. It is for them to engage in an honourable trial of mental strength. The spoils of the ancients glisten before them, but these spoils are not to be obtained without a struggle. The hydra-headed monsters, indolence and self-indulgence, must first be vanquished, other enemies must be crushed, and vigorous efforts must be made ere the splendid treasures be called their own. Above these spoils dazzles, in bright resplendence, a crown to be placed on the head of him who shall prove that he has best deserved it. With all the enthusiasm of young hearts, they now press forward to the contest, it is nothing that enemies oppose, the crown is before them,—they strive, they agonize, they conquer, and having conquered, it is right that they should wear this crown, and rich in the spoils borrowed from an ancient world, they should also stand bedecked with those honours, which shall

bring them praise and glory now. Our youthful combatants having thus conquered, will know and feel their strength; aye, and others, who were once defeated, spurred on by the bright prospect yet before them, will, with a ten-fold power, press on in any future contest, and undaunted by any difficulties, unchecked by an occasional repulse, not enfeebled, but rather strengthened by continued attacks, will not rest while one trophy of victory is yet to be enjoyed, while one enemy remains unconquered, while one niche in the temple of Fame continues unfilled, while one crown prepared for intellectual warriors is unwon, and one palm branch of victory is yet unwaved. The establishment of these exhibitions has also been useful, as calculated to show the public at large what might be done in Australia. It has been proved to be quite possible for youths to obtain a superior education without travelling beyond the limits of the colony. It needs only the presenting a sufficient inducement to entice our boys to work, and to urge parents to allow them the requisite time for the completion of their education. We must give the promise of reward, and answer in a substantial manner the question "cui bono?" which is continually urged when we call to intellectual pursuits. We say we must do this with boys. Soon they will rise to appreciate learning for its own sake, and, with an honourable ambition, strive to surmount all the difficulties which beset them in

their course, needing no other motive to impel them onward than the fact, that knowledge is to be obtained—that wisdom is to be learned.

“ For such the bounteous Providence of Heaven
In every breast implanting this desire
Of objects new and strange to urge us on
With unremitted ardour, to pursue
Those sacred stores that wait the ripening soul
In Truth’s exhaustless bosom.”

Standing as Sydney College does, as our highest educational establishment, we feel deeply interested in its prosperity, and are most anxious to extend its efficiency. In many respects, however, it falls far short of what it ought to be. We have a strange anomaly—a college without the slightest endowment. Far be it from us to detract, in the least, from the merit so justly due to those venerable men, whose anxiety for the welfare of the rising generation, urged them, often amidst almost overwhelming difficulties, to raise the structure, and put the establishment on its present respectable footing. We would merely urge the necessity which exists of there being something beyond a building, something even beyond the opportunity of gaining a good education within our walls, before we can ever induce parents to spare the valuable services of their sons, or our boys to toil and to pant after higher degrees of intellectual advancement. Has not this great cause friends at

“home,” friends in the colony—men, who abounding in this world’s goods, and knowing the advantages arising from the spread of knowledge, are willing to immortalize their names by stepping forward now to our aid, and assisting us in founding scholarships and exhibitions on a fixed plan. By and bye, we doubt not, many will do so. When an institution least needs, it generally obtains the greatest share of help. What we crave is *present* help, what we urge you to do, is, to set a good example. Let us not appeal to our friends at home, nor to our Australian patriots in vain. They, at least, are proud of the country of their birth or of their adoption, they are proud of her sons, of the gigantic strides they have made in all those arts which mark the civilized nation: let the names be graven in the hearts of many of their youth around them, by inciting them to increased exertion, from the inducement thus held out by their philanthropy.

The nucleus of a good library has been formed by donations of books—one by S. Bannister, Esq., late Attorney-General, and another by Mr. S. Lyons to the extent of £100. In the early part of 1843, the Institution also received two volumes of the proceedings of the British Association, presented by that body. This gift is doubly valuable, as proving that an interest is felt in our welfare by learned societies at home, and that they are ready to encourage and advance our colonial literature.

Will some private individuals and other public bodies step forward with the like assistance? The man who is anxious for the spread of true learning is confined, not by the boundaries of oceans and continents, his enthusiasm is kindled at the bare mention of intellectual effort, and in whatever clime, and under whatever circumstances, he discovers mind to be at work, there is he ready to step forward with that assistance and fostering encouragement which alone is necessary to draw forth latent energy, and arouse to increased exertion. In rendering such assistance, be it always remembered, the individual is more honoured by the cause, than the cause by the individual. He is the enlarged patriot who struggles to free men from the shackles of ignorance, he is the noblest warrior who contends with full zeal against mental inactivity, and its attendant moral degradation. He is the true philanthropist, who, with the benevolence of a Howard, toiling through all regions to alleviate human distress, so by his warm and enlightened zeal causes his influence to extend over the world, by giving sight to the mentally beclouded, and opening the prison doors to those whom ignorance and sloth had kept bound in adamant chains. Besides an enlarged library, we should wish to see a supply of philosophical apparatus, that thus our youth might be led into an examination of all the wonders which science is ready to open to their view. Other ends might

then be accomplished, and thus this institution might be made to deserve the name of College, which it now holds rather as prospective of what it may become, than as descriptive of what it actually is at this moment. Thus we might hope to find it become a general Collegiate Institution for the Southern Hemisphere. Neighbouring colonies would avail themselves of the advantages placed within their reach, and India might be ready to land her sons on our shores, that in a milder climate, and at less distance than Britain, they might yet enjoy the same privilege which the mother country affords.

Might not New South Wales thus become the rallying point for the learning of the Southern Hemisphere? Might we not hope to see it at once the centre and focus of all the rays of science and literature? Might not an inducement to touch upon our shores be presented, which does not now exist, and be found in the fact that not only was our commerce extended over the world, but our learning too; not only did we prosper in the wealth of this world's goods, but were still more rich in intellectual treasures. These are pleasing prospects. Removed as we are from the associations of time-hallowed institutions with which old England abounds, we are anxious to rear, in this our land, establishments where our sons and children's children, and many generations yet unborn may expatiate in all the blessings of

enlarged education. And why should this not be? Why should not this portion of the world be as distinguished for its learning as any other? Say not that we are young as a nation, and must wait till our powers be developed before we attempt such an advance. Oh, no! we are not young, we are but a part of Britain, and we have all the experience of the Ancients to guide us. We are mature in the wisdom thus derived. Or, if we be young in the world's history, we possess the enthusiasm and fire of youth, and if we feel the weakness of children, we shall not be ridiculed or despised because we appeal to the Mother State for help.

When England is addressed by her own foster-child, she will not forget her character by refusing to listen. We ask for the best security and support to every State, the extended learning of our sons, we ask to have learning made so honourable, and so advantageous too, that ignorance shall be shamed, yes, and starved out of existence. With how much lustre shall this gem set in the Southern Ocean then glisten in the crown of our beloved Queen! Shall these hints suffice? Will it be enough thus to have directed the friends of education to our wants and resources, in order to ensure their co-operation and zealous assistance? We believe it will. We anticipate that an impetus to our intellectual character will thus be given, and it may be well to assure our British supporters that if they will only help us, we will also help ourselves;

and few as they may be in numbers, and contracted in resources, the friends of education in Australia are resolved to rest not till this interesting colony has risen to an elevation in intellectual and moral greatness yet scarcely anticipated. There is no reason why Australia should not boast an institution worthy in all respects to compete with our best schools at home. Let those who are anxious to be informed on this subject examine the history of some of the most flourishing schools and colleges in England, and they will find that they have risen to their present eminence from beginnings no more promising than Sydney College at this moment presents. "*Sic fortis Etruria crevit*;" and we will not cease to agitate this matter, till Australia can boast its Rugby or its Harrow, and become the emporium of the learning of the southern world.

Among other ends highly desirable is the raising of liberal salaries for those engaged in the work of education. To those who pursue this honourable employment, it should be made advantageous too. "The labourer is worthy of his hire," and he who labours in this field, should be, by his situation and condition, far removed from those pecuniary anxieties and worldly cares which paralyse the energies, and thus, in fact, retard the very work which he is set to promote. "Slow rises worth by poverty depressed," and although there may be something of romance in the disin-

terested zeal of the starving instructor of youth, in New South Wales we are not very romantic, and stern necessity, in the shape of ten thousand annoyances, injurious both to the mind and body, will infallibly attend him whose condition is not raised above the pressure of financial embarrassment. We feel that we have a just complaint to make on behalf of many men of superior education in this colony—men whose talents, time and energies are all engaged in the tuition of the families of many respectable settlers, whose remuneration is very, very frequently, not greater than that given to a shepherd, and often not paid when due. The times call for a rigid economy, and we are pleased to see the fathers of families curtailing their expenses; but they begin where they ought to end. Nothing but the direst necessity should compel them to demean to the level of a common servant, that teacher, on the faithful discharge of whose duties so much depends. These things should not be.

Before we close we must urge one point. It will not suffice to teach our youth mere human learning, without training them in the principles of morality and religion. They need the discipline of the heart, the cultivation of the conscience. We make our youth good citizens by making them Christians, we give them the best and most enduring riches when we supply them with the “pearl of great price.” This is our highest duty :

“ We are bound to cast the minds of youth
Betimes into the mould of heavenly truth,
That taught of Heaven, they may indeed be wise,
Nor, ignorantly wandering, miss the skies.”

The teachers we want are men who will appreciate and carry out these principles, and having obtained them, let their hands be strengthened by Colonial and British generosity, and from that period we shall date our perpetually extending prosperity. Connecting this subject with that of our last chapter, again we turn to Britain for help. We do so in the language of Mr. Justice Burton, in the work previously referred to, “because the cause is one, the Church is one, and the duty is common to all.” Shall we ask in vain? In vain of those who pray constantly as the Sabbath returns, “that thy way may be known upon earth, thy saving health among all nations?” In vain of those who profess to love the Gospel, and who are enjoying all the sweets of religious knowledge? In vain of the disciples of Christ, the children of Him, “who will have all men to be saved, and come to the knowledge of the truth?” Oh no! forbid it British Christians. Use your influence and your energies to make this colony a religious educated State. Britain may glory in her dependencies if she discharge this her highest duty to them; if she fail in this, let her fear lest they be but a millstone around her neck to sink her into fearful punishment and disgrace. In education we spe-

cially call for aid. By all the evils which ignorance brings in its train, by the blessings of enlightened instruction, by the position in which we stand to the mother country, by the ties of kindred which bind many in England to some in Australia, by the bond of fellowship which connects every son of Adam, by the stronger tie which unites every disciple of Christ, by every feeling of humanity, interest, patriotism and religion, we ask for Britons to help us. One long, loud, united cry is heard across the waters, summoning to the help of Australia, and echoed back, we catch the pleasing message, that Britain obeys the summons, and is ready to our bidding. *To our bidding?* No! to the bidding of Him who says, "I give thee for a light to the Gentiles that thou mayest be my salvation to the ends of the earth." Britain! this is thy destiny; fulfil it. One word to Australia. We cannot ask for assistance, if we be not roused to exertion ourselves. Fathers, mothers, your children ask for a full and complete education, and the destiny of your childrens' children depends on your conduct now. Australians! you profess attachment to the land of your birth, prove yourselves true patriots; rest not till education spread over the land, till the tree of knowledge strike it roots deep, extend its branches, scatter its fragrance, and disperse its fruit in every valley, and over every hill of this beauteous clime Oh God! do thou assist our labours, reward our zeal,

and with thine own benediction shelter, bless and prosper. "Let thy work appear unto thy servants, and thy glory unto their children, and let the beauty of the Lord our God be upon us, and establish thou the work of our hands upon us ; yea, the work of our hands establish thou it !"

CHAPTER V.

THE CLIMATOLOGY AND DISEASES OF AUSTRALIA.

THE close connexion subsisting between meteorological agencies, and the phenomena of life is universally admitted. The production of some diseases, and the peculiar modification presented by others, characterize certain climates. The ague produced by the malaria of the Pontine marshes, the jungle-fever of India, the endemic diseases of Africa and the savannahs of America, afford ample illustrations of the truth of this remark. Dependent as is the animal organization of man upon the external circumstances of air, of temperature, of moisture, of food, and many other, perhaps equally influential, though less obvious conditions of the medium in which he lives, such as the electrical state of the atmosphere—alterations in any one of these must be productive of corresponding changes in the economy of his system. It would be inconsistent with the plan of this work to enter into any lengthened argument with the view of illustrating this proposition, the truth of which

has been acquiesced in by nearly all men, and in all ages. It is introduced on the present occasion with the view of anticipating the few subsequent observations on the "Climatology and Diseases of Australia."

The physical aspect of the Australian continent, so far as has hitherto been ascertained, is devoid of any of those striking features, which, from its great superficial extent, it might have been expected to present. The want of any very considerable altitude in the several mountain ranges that have hitherto been explored, and the absence of large rivers, is a remark generally applicable to the whole of Australia, although less so with respect to the eastern than to the western half. Indeed, the latter, in some localities, presents a remarkable deviation from the general physiognomy that belongs to the rest of the country; the mountains possess an Alpine character, and the chief rivers flow through long-extended tracts. The great dividing range, extending throughout the whole length of Eastern Australia, a distance of upwards of thirty degrees, attains in many points an altitude of not less than from seven to probably nine thousand feet. The summits of some of the mountains of Gipps' Land would appear to be within the limits of perpetual snow. If some parts of this great mountain barrier presents a lower elevation, one not exceeding two thousand feet; its average height may, however, be taken at about four thousand feet,

presenting bold, rocky, cliffs, and mural escarpments towards the sea. Its distance from the coast varies from fifty to one hundred and fifty miles, and its summit forms, in general, extensive tablelands, stretching away to the westward, and then terminating in the great deserts of the interior. This table-land is occasionally interrupted by isolated peaks, and low ranges, which appear, however, only occasionally to relieve the blank uniformity that pervades the great Australian steppes.

Little is known of the geognostic character of the great dividing range of Eastern Australia. Its southern extremity consists of primitive and transition rocks; succeeding to which is an immense deposit of sandstone, with which coal is associated, and which forms the predominant rock in the whole of the nineteen counties—the division of the colony first settled. The general direction of the great sandstone deposit being north and south, it is traversed by numerous fissures and ravines, called, in the language of the colonists, gullies, often of great depth, and constituting some of the most striking and impressive scenery that the colony presents.

The proximity of the dividing range to the coast necessarily circumscribes the course of the rivers flowing to the eastward. Those best known, and of the greatest importance, are the Hawkesbury, the Hunter, the Clarence, and the Brisbane, collecting the waters of the eastern slope of the

Blue Mountain range. The general character of these streams is, that in the upper part of their course they consist of mere mountain torrents, dry or forming water-holes during the summer season, and becoming converted into rapid streams during the rainy season. On attaining a lower level on the alluvial plains, they soon become blended with the reflex tidal current occasioned by the sea, and form brackish streams, flowing through lagoons of no great extent.

The waters, collected from the western slope of the mountains, form, however, rivers, which from the length of their course, if not from their volume, may be compared with some of the more celebrated streams of the Old World. The Darling, taking its origin from a region within the tropics, flows through a distance of probably not less than two thousand miles, before it reaches the ocean. Some of its tributaries, such as the Murumbidgee, springing from a high level, flow with considerable rapidity; the main trunk of the river, from its soon reaching a low level, is, however, characterized by its slow and lethargic course, and the extensive marshes through which it winds its way to the sea, are frequently subjected to wide-spreading inundations. The greater part of its banks appears to consist of an almost boundless extent of the richest alluvial plains. The Darling may be considered as the Mississippi of Australia. It will, like its American prototype, be one day the great theatre

of industry and enterprise; and doubtless, also, like the river just named, mingle its blessings with the evils of pestilence—the most lavish gifts of nature, with the poisoned exhalations of the stagnant morass.

As the Darling collects and conveys all the waters of the south-eastern part of Australia (excepting the comparatively insignificant streams flowing from the eastern side of the coast range), the discovery of some large river, the vehicle of the waters flowing to the northward, remains still to be made. The enormous accumulation of fresh water in the Gulf of Carpentaria, and the actual discovery of some considerable streams flowing into it, clearly point it out as the estuary of some great body of fresh water. The character of the low land surrounding the Gulf of Carpentaria, together with the concomitant circumstance of its forming the embouchure of a large river, afford interesting grounds for speculation as to the aptitude of this region for settlement by man, and for the advantageous employment of human industry.

The meteorological phenomena of Australia are not less anomalous than many of its other physical adjuncts. Taking its extreme northern and southern points, in S. lat. 11° and 39° , the difference of temperature appears, from all that has hitherto been ascertained, to be much less than could, *à priori*, have been expected. Captain Stokes found, in the mouth of the Albert, the temperature

of the water only 50° of Fahrenheit, in S. lat. 17° ; while the mean annual temperature of Sydney, in S. lat. 34° , is 65.87. Unfortunately the statistics, upon which any very correct inductions can be formed as to the law regulating meteorological phenomena, are scanty, and do not extend over a sufficient space of time to justify much reliance being placed upon them. It may, perhaps, however, be affirmed, as a general rule, that whilst the extremes of the scale are not widely removed, the oscillations between the maxima and minima are frequent and exceedingly capricious. It is no uncommon thing for the thermometer to present a range within a few hours of thirty or even forty degrees. The sudden elevation of temperature appears to be dependent upon the hot winds blowing from the interior. In the neighbourhood of the coast, the alternation of the sea and land breezes preserves an equilibrium of temperature, which renders the heat of the summer season more tolerable than it is felt to be on the arid plains of the interior.

No accurate measurement of the quantity of rain falling during the year has been kept for a sufficient time to determine the real average for any lengthened period. The rains have, in the extra-tropical regions, much of the tropical character, being, to a certain extent, periodic in their visitations, generally violent, and of short continuance. Their effects soon subside, from the

rapidity with which the drainage of the soil is carried on, at all events, on the eastern side of the coast range; and it is no unusual thing to find the evils of severe drought arising within a few weeks after the fall of heavy rains:

“ arbore nunc aquas
Culpante, nunc torrentia agros
Sidera.”

The total quantity of rain during the year 1844 was fifty inches, of which thirty inches fell during the months of January and October. It is alleged that as much as twenty inches have fallen within twenty-four hours, at the South Head of Port Jackson.*

So far as climate may be considered as influencing the organization of man, its effects in New South Wales appear to be analogous to those observed in countries elsewhere, of a tropical or semi-tropical character. Rapid growth, with early development of the physical as well as intellectual powers, characterizes each sex, but more particularly the female. This remarkable precocity appears, however, to be compensated for by early and premature decay. The girl of fifteen possessing all the charms, and many of the graces of woman-

* In the space of thirty-one hours, extending over part of the 25th, the whole of the 26th and part of the 27th of January, 1844, the quantity which fell at South Head was 25.6 inches.

hood, must, at the age of thirty, yield the palm to her, who, realizing the triumphs of her sex at a later, preserves them to a more advanced, period of life. This appears to be a law belonging to all warm climates; and it is not under the burning sun of an Australian sky, that we must ever look for the mature attractions of a Ninon de l'Enclos.

Whilst this acceleration of the springs of life appears to attend all those born under its influence, the Australian climate would seem to have an opposite effect on such as are only brought under its influence in middle or advanced life.* A sort of rejuvenescence appears to be induced; an addition made to what might have been looked forward to as the ordinary span of existence. Numerous examples might be quoted of persons arriving in the colony at the age of sixty and upwards, who have acquired new vigour—like trees transplanted into a more congenial soil. A hundred years has been the age attained by many before the colony had been settled half that period of time—instances too occurring in men, whose past lives had been fraught with hardship and severe penance, the fruits of irregular and vicious lives.

The scattered nature of the population, and the difficulty of collecting satisfactory statistical data,

* We do not understand on what principle the English insurance offices charge an extra per centage on the lives of persons resident in Australia, though we unhappily know such to be the case from lengthened experience.

renders all calculations as to the average rate of longevity, the ratio of increase in population, the influence or precise extent of particular diseases, matter of much uncertainty. Diseases generally may be said to assume the type they possess in analogous climates. Acute inflammatory disorders are rare, and the system of depletion, pursued by the practitioner of medicine in England, is one scarcely, if ever, called for. Derangements of the digestive organs are the most common of all maladies, accompanied often with hepatic derangement, and in the warm season by dysentery. Diseases affecting the circulating system, attended with every degree of aggravation, from that of organic lesion of the heart and larger vessels, to such as are the mere consequence of nervous sympathy, are of frequent, and almost daily occurrence. There is reason to believe, that the exciting nature of colonial pursuits, the exaggerated emotions of alternate hope and disappointment, which it is the lot of so many to experience, have had much to do with the production of this class of disorders. For similar reasons, diseases affecting the nervous system appear to be of great frequency.

The reputation which the climate of Australia enjoys, as to its being favourable for invalids suffering from tendency to consumption, appears scarcely merited. It has, at all events, been our lot to witness a large proportion (as large, perhaps, in proportion to other diseases, as what would be

likely to be found in many English towns of the same size) of cases of those who have fallen victims to this inexorable disease—in some instances, of those who were natives of the colony, in others, of individuals who had been many years previously resident in it, and who could hardly be supposed to have derived from a less congenial climate, the malady to which at length they were obliged to succumb.

Catarrhal affections often prevail epidemically, and are frequently followed by permanent affections of the bronchial tubes.

Rheumatism is of very general prevalence, and is apparently dependent upon the sudden atmospheric vicissitudes to which the colony is liable.

From the general absence of marsh miasmata, remittent fevers are seldom or never met with. This exemption may partly be owing to the absence of deciduous foliage in the trees, and the anti-septic character of most of the vegetable remains, when brought into a state of decay. The large proportion of tannin contained in all the gum-tree and mimosa tribes of plants, seems to preserve them from rapid decomposition, and from the exhalation of those noxious gases, which, under the designation of malaria, infect other parts of the world.

Small-pox has been hitherto unknown in the colony. Measles and scarlet-fever, (introduced through the agency of immigrant vessels) have

been productive of great mortality. The last-named disease swept off large numbers of the native-born population, who were attacked by it; and for the time it lasted, its influence was scarcely less fatal than that of the Asiatic cholera, on the first introduction of that disease into Britain. It seems to be the law with all epidemics of this class, that they should prove much more devastating on their first appearance in any country, than subsequently, after having expended their morbid energy, and when they become, as it were, acclimatized.

It is a duty incumbent upon the local government to keep this fact in mind, and to exercise due vigilance in the enforcement of quarantine regulations. The non-observance or neglect of these may lead to disastrous consequences, in a public, as well as a private point of view. The energies and prosperity of a young colony are immediately dependent upon the number of her inhabitants. Unlike old and over-crowded countries, the loss of a single citizen is to her a public loss; and a literal instead of a figurative application may be given to the axiom, that "the health of the people is an object of paramount importance."

CHAPTER VI.

THE ABORIGINES.

IT was our intention to have devoted a considerable portion of our space to a chapter on the Aborigines of this country, giving some account of their origin, so far as it can be traced with any degree of probability, of their mythology, manners, and customs; and to have reduced to some system the language employed by them. For this purpose, we have for many years past been collecting a mass of materials respecting the natives of Van Diemen's Land, the remnant of whom are now domiciled on Flinder's Island, and also those of New Holland. The great length to which we have been led in the preceding chapters, has, however, occupied all our space, and we must, therefore, defer to another opportunity the arrangement of the information in our possession. Meanwhile, it would appear strange to send forth a "History of New South Wales," without referring at all to the sable natives of the

soil : a short notice will, consequently, be given in this place.

Notwithstanding the extensive machinery which has now for many years been employed, with a view of protecting the natives, and inducing them to quit their roving habits, and assimilate themselves to our mode of life—the best apologists for the Protectorate must own, that little good has been effected.

On the motion of Dr. Thomson, M.C., for Port Phillip, a return was lately laid upon the table of the Legislative Council of the expenses defrayed from the Colonial Treasury of New South Wales, of every Mission to the Aborigines within the Colony, and of the Protectorate, from the commencement to 31st Dec. 1842, and it was found to amount to the large sum of £51,807. 12s. 2 $\frac{3}{4}$ d. to which is to be added half the expense of the Border Police, which is usually considered to be incurred on account of the Aborigines,—viz. : £27,716. 8s. 9d., making a total for this service of £79,524. 0s. 11 $\frac{3}{4}$ d. Large as this sum appears to be, no one who has been in the habit of seeing and mixing with the poor creatures to whose protection and civilization it has been devoted, would regret its extent, provided he could see that any corresponding amount of good had been effected. We must honestly say, from all the sources of information open to us, that little or no “value” has been rendered for it.

Whether this want of success has arisen from some defect in the present system, we are at a loss to tell. Mr. Dredge, whom his Honour, the Superintendent of Port Phillip, describes "as the best fitted of the Assistant Protectors for the duty to which he was appointed," declared his conviction, "that according to his judgment, the office, as at present constituted, must fail of attaining the benevolent and praiseworthy object for which it was created." Mr. Gunther, the Missionary at Wellington Valley, in his annual report, says, "If the work of civilizing and christianizing a savage race was dependent merely on human efforts, I candidly confess I should be ready to despair of the Aboriginal inhabitants of this country ever being raised from their degraded condition, since so little progress has hitherto attended this Mission, as well as various similar attempts in different parts of the country Amongst all those young men, who, for years past, have been more or less attached to the Mission, there is only one who affords some satisfaction and encouragement He has gradually shaken off the yoke and dominion of the elderly men, and has banished many superstitious notions from his mind. As regards the others, I can give no very favourable account of them. Several of them who used to stay at, or frequent the Mission, resorted to their old migratory habits, and one, I fear, in consequence of depriving himself of the advantages and comforts of civilized life, to which

he for years has been accustomed, has lately died in a state of decline Their thoughtlessness, a spirit of independence, ingratitude, and want of sincere straightforward dealing, often try us in the extreme. Civilized habits, however much some may occasionally fancy them, or conform to them, will never, I feel convinced, become natural and easy to the present generation, unless a new principle be implanted in their minds, and a thorough change effected by the influence of Christianity The evils resulting from polygamy, (which is permitted by the vile as well as absurd code of laws prevailing amongst these people), are great and manifold. On the one hand, it causes constant strifes and fightings ; on the other hand, the elder or influential men, possessed of a plurality of wives, being, in reality, only the keepers of them, have it in their power to hold out certain allurements to the young, who cannot obtain wives, and by obliging the latter, as it is considered, the former can command, or extort implicit obedience. This accounts for the fact, that Aboriginal males, however useful and steady they may have been among Europeans when boys, so soon as they grow up to manhood, fall back into their wandering unsettled habits.

“ I lament much that the difficulty to obtain Aboriginal children for instruction, has increased almost to an impossibility. In whatever direction I go, even at a distance of forty or sixty miles, the parents conceal their children, as soon as they hear

that a missionary approaches their camp; and when I come upon them by surprise, I have the grievance to observe these little ones running into the bushes, or into the bed of the river with the utmost rapidity."

The Rev. J. C. S. Handt, in speaking of the natives of Moreton Bay, says: "Should they receive any article of clothing, it is seldom seen any more, for they tear it in pieces for head-bands, and divide it among their acquaintance.

"Their food, when in the bush, is almost every kind of animal which they can get into their possession; the fruit of some trees and shrubs, the roots of several plants, and occasionally some honey. They cannot possibly reside on any particular spot for a long period together, as roots and game would soon become scarce; they generally keep, however, within their territories, which they have distinctly marked out between themselves, but their camp is moved about every five or six days."

When speaking of the decrease in their numbers which is yearly so apparent, the same gentleman goes on to say: "several fights have taken place among them; but this is not the chief cause of their decrease, as their fights bear rather the character of warlike games, in which seldom more than one, and frequently none at all, is killed, but merely some wounded. One of the principal causes of their decrease is, the diseases to which they are subject, and particularly that which Providence

has ordained to be the scourge of excess and debauchery, and from which even the children are not exempted. Some of them have died of consumption and dropsy; another principal cause of their decrease is, the prostitution of their wives to Europeans. This base intercourse not only retards the procreation of their own race, but it almost always tends to the destruction of the offspring brought into existence by its means, for they generally kill the half-caste children as soon as born. The number of children, is, consequently, but small, when compared with that of the adults. The proportion of males to females is likewise unequal, the former being about one third more than the latter; this circumstance frequently induces the men to steal their wives, and this has given occasion to many a bloody strife."

The cause of the diminution in the number of blacks stated by Mr. Handt, is undoubtedly the true one. It does not arise from *want*, for it is well known that there is abundance of food convenient for them, even in those quarters whence the kangaroos have been expelled by the residence of the whites. In the country districts, it does not arise from intemperance; that is but rarely seen, excepting in towns, where they learn the vile habit from those who should show them a better example. A glance at their habits will convince us that the true solution of the question is to be found in *disease*.

The climate of New South Wales is sometimes very hot, at other times, severely cold. In the winter months we have alternate wet and frost. The natives have no huts, and are scantily clothed. Instead of preparing opossum skins for a covering, as they formerly did, they now trust to the issue of government blankets, which are not issued sufficiently frequently to protect them against the inclemency of the weather. They are very intemperate in eating, and thus, with a variable climate, and without shelter, it is obvious that when disease comes, it attacks them with more than its native virulence.

“Exposed then,” as has been well observed by a writer in the New South Wales’ Magazine, “to vicissitudes of weather, unsheltered, unclothed, susceptible of diseases, ignorant of remedies, even if they were within their power, and the object of new and dangerous diseases, who will wonder that the race should be in rapid progress of extinction.”

The whole of the reports from the protectors and others well able to judge, speak with but little confidence of any good resulting from the services. The plan most likely to succeed would be, to obtain their children; but on this point there are many difficulties to be overcome. Not only are the parents unwilling to give up their children, but if they do so, the youths are sure to return to the bush when grown up. We knew an instance of two boys called Joey Tamar and Teddy Flinders;

who, when infants, were placed in the Queen's Orphan Schools near Hobart Town, and when they had grown, no sooner did they find an opportunity of getting "out of bounds" than they betook themselves to the woods, until, at length, it was found impossible to tame them, and they were removed to join their fellows on Flinders Island. This is a strange propensity, and difficult to be accounted for, as it could not have arisen, in the cases to which we are referring, from early associations, since they were babes at the time of their reception into the orphan schools.

We extract from the "*Port Phillip Herald*," the following interesting paper, from the able pen of Mr. Assistant Protector Parker, on the manners, customs, and traditions of the Aborigines of the North-western, or Loddon River District.

"Many erroneous opinions have been entertained respecting the character and habits of the Aborigines of Australia, and it has been commonly asserted that they are totally destitute of any notions worthy of the name of religious opinions. In the earlier period of my acquaintance with them, I entertained similar views, but further communication has induced a conviction that a traditional mythology exists among them, rude and obscure, indeed, but in all probability the indistinct relics of some older and more complete system. It must be sufficiently obvious to all who have had much intercourse with the native tribes, that they are

exceedingly reluctant to speak on these subjects ; a circumstance readily accounted for by the fact, that whatever notions they entertain of supernatural beings, all refer to objects of fear and dread, and not of love. The older natives can scarcely be brought at all to speak about their traditions ; but from the young men, I have latterly obtained some more definite information than I formerly possessed, which appears to me of sufficient interest to become matter of record.

“ I have long been convinced that in addition to a general notion of the existence of an immaterial principle in man, which survives the body, the Aborigines entertained opinions bearing a rude analogy to the metempsychosis of the Oriental mythologies. They have cherished the idea that the souls of their deceased friends pass into the bodies of certain species of birds. How long this is supposed to continue, and what may be the result of the change, they are either unable or unwilling to tell. The belief also has been very general that the whites who have occupied their country were formerly “ black fellows,” who have passed into a new and highly improved state of existence. It is remarkable that the designation given to the white inhabitants of the colony in most of the dialects of which I have heard, (*amydeet*, Jajowrong, *amerjig*, Koligan, *amy gai*, &c.) appears to be identical with the words used to describe the soul when separated from the body.

I once, and but once, saw a singular ceremonious dance, on the Loddon station, which was called "Yepéne amy gai," or dance of separate spirits. It was avowedly a novel affair to nearly all the actors, and was taught by an old man from the westward, since dead. In this ceremony, after a very singular and not unpleasing dance with branches in either hand, all, with the exception of the two old men, who were leaders, came together to one spot, and gradually bent towards the ground, becoming slower and slower in their motions, till they were entirely prostrate. They remained perfectly motionless for some time, and a mournful chant was sung over them, and they were said to be "dead." The two old men then went round them several times, and seemed to be driving something away with their boughs, singing at the same time with increasing energy till they became very loud and rapid. Then at a given signal they all sprang to their feet, and recommenced their dance. They were then said to be "alive."

"I have made many inquiries to ascertain whether any notion of a superior power or deity existed among the tribes with which I am in communication. I think I have found a distinct tradition of the supposed existence of a being possessing some of the attributes of a deity. The name of this imaginary being is *Binbeal*. They assign to him the making of an original pair, from whom has descended the present race of

man. There is evidently much vagueness and obscurity in their notions on this particular topic. But they are more distinct in their representation of the relation he is to bear to them after death. He is said to take the spirits of deceased natives, and subject them to a sort of purgatory, placing them in fire to try them whether good or bad; the good are at once liberated, but the bad are made to suffer for an indefinite time. They have sometimes replied to my enquiry, "who made all things," &c., "Binbeal," but the reply is given in a doubtful and hesitating manner, and it is a frequent acknowledgment with them that they are "very stupid," and know little about the great facts of creation and Providence.

"Other traditions exist among them referring to the origin of certain natural objects. Thus they believe in the existence of another mythological being called *Bonjil* or *Pundyil*, who, however, is said to have been once a "black fellow," and a remarkable locality is indicated as his residence when on earth. This is the deep basaltic glen or hollow, forming the fall of "Lallal" on the Marrabool, near Mr. Airey's station. He is now represented as dwelling in the sky, and it is curious that they call the planet Jupiter "Pundyil," and say it is the light of his fire. This Pundyil is said to have found a single kangaroo, emu, and other animals on earth: that he caught them, cut them up, and by some mysterious power, made each

piece into a new kangaroo, &c., and that hence the country was filled with these animals.

“ Another tradition professes to account for the origin of the Pyrenees, Mameloid Hills, and the neighbouring heights. It is ridiculous enough in its details, but supposes them all to have originated in a single immense mountain, which was torn to pieces by the action of fire. The volcanic character of the district may seem to suggest the source of this notion.

“ Of all the objects included in their rude and savage superstitions, none appear to exercise more influence on the native mind than the fear of the *Mindy*. They apply this term to a large species of serpent, which is universally asserted by the natives to exist, in the hitherto unexplored country, between Mitchell's Outward Line and the Murray. The object of dread, however, is a supernatural being having the form of the animal just named. This being is represented as having the power of inflicting disease and death when invoked by incantations. The existence of any epidemic or endemic disease is always ascribed to its influence. It is remarkable that the small pox, which from the accounts given by the natives, must at times have proved a terrific scourge to them, is called “ *Monola Mindy*,” or the dust of the *Mindy*; and the scars left by it “ *Lillipook Mindy*,” or scales of the *Mindy*. The whirlwinds which in the summer season carry up columns of dust to a

great height are much dreaded by the Aborigines. To be included in the vortex of one is regarded as a sign of speedy death, because it is said to be an indication of the presence of the Mindye; it is in fact called "its tail." The men who are regarded as magicians or conjurors profess to derive their power from some pretended communication with this object. Although there seems to be nothing deserving the name of a regular religious rite among them, I am disposed to think, that some peculiar ceremonies which have been observed within the last two years, are intended to propitiate this dreaded phantom, and to avert the consequences of its anger. And I think in their ceremonies and superstitions may be traced the obscure and nearly obliterated relics of the ancient *ophelatria* or serpent worship, still extant in India and Africa.

"I am fully convinced that these wretched superstitions have far less hold upon the minds of the younger part of the aboriginal population than on the middle aged and elderly people. Some of the young men openly ridicule their notions; and it is remarkable how very few attempt to question the truth of what is stated to them on religious topics. Their traditionary superstitions are too dim and indefinite to give the mind much pre-occupation, and the estimate which they have formed of the superior knowledge of the whites, predisposes them to listen, at least with respect, to what may be inculcated.

“ I have thus briefly sketched a few of the traditional superstitions of the Aborigines. I do not however profess to give this as a complete delineation of the subject. Other details have been given to me, but the information I have received is not yet sufficient to communicate. I have little doubt that more extended acquaintance with their language and opinions, and increasing confidence on their part, will elicit many interesting circumstances in connection with their history and associations.”

In one of the preceding extracts, it was remarked that honey was occasionally one of the means of subsistence of the natives. The following account of their manner of collecting it, will be found interesting :

Wild Honey, or, as the natives call it, Choogar Bag, is collected by a small stingless bee, not so large as the common fly. The honey-nest is generally found at the summit of remarkably high trees. When the lynx-eyed native discovers it from below, there he will stand with his head up, making a dead point at it until it is attained by his *gin*, who immediately begins with a small tomahawk, and by a rapid action of the wrist, to cut a notch in the bark of the tree, large enough for her great toe to rest upon. Winding her left arm round the body of the tree, she adroitly raises herself to this notch, and there

rests the ball of the great toe of the right foot. She then cuts a notch above her head and quickly ascends to this ; and so on in like manner until she reaches the dizzy height to which she is directed from below, exhibiting throughout the most astonishing stretch and pliancy of limb, and the most wonderful absence of all fear of danger. She recklessly advances towards the extremity of a fragile bough which appears ready to break. If she can reach the honey, she seizes it, and places it in a sort of calabash slung round her neck, at the same time holding her hatchet in her mouth. Where she finds it impracticable to reach the honey, she cuts off the branch, which, with its mellifluous appendage, falls to the ground at the feet of her sable lord, who stands below. The honey is of delicious flavour, after it has been carefully separated from the comb, the cells of which are generally filled with small flies. The natives, however, devour it just as they find it, and are very fond even of the refuse comb, with which they make their favourite beverage called Bull, and of this they drink till they become quite intoxicated.

Ko-in, Tip-pa-kál, and Pórráng, is the three-fold name of an imaginary evil being among the natives. They say he was always black as he is now ; that he resembles themselves, and resides

in thick brushes and jungles, making his appearance mostly by night. In general, they think he precedes the coming of natives from distant parts, when they assemble to celebrate certain mysteries, as knocking out the tooth in a mystic ring, or when performing some dance. He appears painted with pipe-clay, and carries a fire-stick in his hand; but generally it is the doctors—a kind of magicians—who alone perceive him, to whom he says, “Fear not, come and talk.” At other times they say, when they are asleep, he comes and takes them up, as an eagle his prey, and carries them away. The shout of the terrified ones who are left, occasions him to drop his prey; otherwise he conveys them to his fire-place in the bush, where he deposits his load close by the fire. The person carried off tries to cry out, but cannot, feeling himself almost choked: at day-light, Koin disappears, and the black finds himself conveyed safely to his own fire-side.

Tippa-kal-lé-un, Mail-kun, Bim-poin, are the names of the wife of Koin. She is a much more terrific being than her husband, whom the blacks do not dread, because he does not kill them; but this female being, not only carries off the natives in a large bag-net beneath the earth, but she spears the children through the temple dead, and no one ever sees again those whom she obtains.

Ko-yo-ró-wén, the name of another imaginary being. His trill in the bush frequently alarms the blacks by night. When he overtakes a native, he commands him to exchange cudgels, giving his own which is extremely large, and desiring the black to take a first blow at his head, which he holds down for that purpose, after which he smiles and kills the person with one blow, skewers him with the cudgel, carries him off, roasts, and then eats him.

Kur-ri-wilbán. The name of his wife ; she has a long horn on each shoulder growing upward, with which she pierces the Aborigines, and then shakes herself until they are impaled on her shoulders ; when she carries them to the deep valley, roasts and eats her victims. She does not kill the women, they being always taken by her husband for himself.

Put-ti-kán, another imaginary being, like a horse ; having a large mane and tall, sharp like a cutlass. Whenever he meets the blacks, they go towards him and draw up their lips to show that the tooth is knocked out, when he will not injure them ; but should the tooth be left in, he runs after, kills and eats them. He does not walk, but bounds like a kangaroo, the noise of which on the ground, is as the report of a gun, calling out as he advances, "Pir-ro-lóng, Pirro-lóng !"

Pór-ro-bung, the name of a mystic ring, in which they dance and fall down at certain periods. From pór, to drop down.

Yu-lung is the name of the ring in which the tooth is knocked out. The trees near the ring are marked with rude representations of locusts, serpents, &c., on the bark, chopped with an axe, and similitudes of the nests of various quadrupeds are formed on the ground near the spot. They dance for several days, every morning and evening, continuing the whole of the night: no women are allowed to join in the ceremony.

Mur-ro-kun, the name of a mysterious bone, which is obtained by the Ka-rá-kul, a doctor or conjuror, three of whom sleep on the grave of a recently interred corpse, where in the night, during their sleep, the dead person inserts a mysterious bone into each thigh of the three doctors, who feel the puncture not more severe than that of the sting of an ant! The bones remain in the flesh of the doctors, without any inconvenience to them, until they wish to kill any person, when by unknown means, it is said and believed, they destroy in a supernatural manner their ill-fated victim by the mysterious bone, causing it to enter into their bodies, and so occasion their death!

Múr-ra-mai. The name of a round ball, about the size of a cricket-ball, which the Aborigines carry in a small net suspended from their girdles of opossum yarn. The women are not allowed to see the internal part of the ball; it is used as a talisman against sickness, and it is sent from tribe to tribe for hundreds of miles on the sea-coast, and in the interior; one was shown to the Rev. Mr. Threlkeld, (from whom this account, with much other most interesting information is derived), privately in his study, the black betraying considerable anxiety lest any female should see the contents. After unrolling many yards of woollen cord, made from the fur of the opossum, the contents proved to be a quartz-like substance of the size of a pigeon's egg. The native allowed Mr. Threlkeld to break it, and retain a part. It is transparent like white sugar-candy. They swallow the small crystalline particles which crumble off, as a preventative of sickness. It scratches glass, and does not effervesce with acids. From another specimen, the stone appears to be agate of a milky hue, semi-pellucid, and strikes fire.

Nung-ngún, a song. There are poets among them who compose songs which are sung and danced to by their own tribe in the first place, after which other tribes learn the song and dance, which

itinerates from tribe to tribe throughout the country, until, from change of dialect, the very words are not understood by distant blacks.

Yár-ro, literally an egg; but mystically, to the initiated ones, it means fire or water. By this term, in asking for either element, the fraternity discover themselves to each other. Their name for women is kun-nai-ka-rá, when the tooth is knocked out of the men, and themselves are called yi-ra-bar, previous to which they are styled ko-ru-mun. The ceremony of initiation takes place every three or four years, as young lads arrive at the age of puberty, when mystic rings are made in the woods, and numerous ridiculous ceremonies are gone through, before the operation of displacing the tooth in the upper jaw, which is effected by three steady blows with a stout punch, from the hand of the ka-rá-kul, after which the youths may seize a woman, and engage in their fights.

The following glance at the Language of the native tribes of New South Wales may interest the curious:—

Their letters are, A, B, E, I, K, L, M, N, Ng, O, P, R, T, U, W, Y.

The vowels *a*, *e*, *i*, *o*, *u*, are thus sounded:

A as *a* in far; *e* as *e* in where; *i* as *e* in Eng-

land; *o* is pronounced as in the English word *no*; *u* as *cool*.

When two vowels meet together, they must be pronounced distinctly, as *niu-wo-a*.

DIPHTHONGS.

ai rhymes with *eye*, as *ko-lai*, *wood*.

au „ with *cow*, as *nau-wai*, a canoe.

iu „ with *pew*, as *niu-wo-a*, *he*.

CONSONANTS.

B is pronounced as in the English words *be*, *crab*.

D as heard in *deed*, if used at all.

K as in *King*, *kirk*.

L as in *lord*, *ell*.

M as in *man*, *embark*.

N as in *nun*, *no*.

Ng is peculiar to the language, as sounds in *ring*, *bung*, whether at the beginning, middle, or end of a word.

P as in *pea*, *pip*, *pipe*.

R as in *rogue*, *rough*, *Rome*; whenever used, it cannot be pronounced too roughly; when double, each letter must be heard distinctly.

T as heard in *tea*.

W as in *war*.

Y as in *yard*.

ACCENTS.

The language requires but one marked accent, which serves for the prolongation of the syllable; as *bón*, him; *bún*, the root of the verb to smite. The primitive sound of the vowel is thus retained, which otherwise would be affected by the closing consonant, as *bun*, the root of the verb “to be accidental,” rhymes with *fun*; but *bún*, to smite, rhymes with *boon*, a gift.

PARADIGM OF THE ACTIVE VERB.

Bún, to smite.

INDICATIVE MOOD, PRESENT TENSE.

Singular.

- | | | |
|--------------------|---|--|
| 1. <i>Bún-tan*</i> | { | <i>báng</i> , <i>I strike some object now.</i> |
| | | <i>bí</i> , <i>thou strikest.</i> |
| | | <i>nó-a</i> , <i>he strikes.</i> |
| | | <i>bo-un-tó-a</i> , <i>she strikes.</i> |
| | | <i>ngá-li</i> , <i>this (at hand) strikes.</i> |
| | | <i>nga-ló-a</i> , <i>that (close to thee) strikes.</i> |
| | | <i>ngá-la</i> , <i>that (spoken of) strikes.</i> |

Dual.

- | | | |
|--------------------|---|--|
| 2. <i>Bún-tan*</i> | { | <i>ba-li</i> , <i>thou and I strike, we both strike.</i> |
| | | <i>ba-li no-a</i> , <i>he and I strike.</i> |
| | | <i>ba-li, bo-un-to-a</i> , <i>she and I strike.</i> |
| | | <i>bu-la</i> , <i>ye two strike.</i> |
| | | <i>bu-la bu-lo-a-ra</i> , <i>they two strike.</i> |

* When the object is to be specified, the word denoting it must be placed in the situation of the asterisk: as *Bún-tan*, *bón-báng*, *I strike him*: but a thing thus, *Bun-tán bang un ni*, *I strike this*: so also in the dual and plural.

Plural.

3. Bún-tan* $\left\{ \begin{array}{l} \text{ngé-eu, we strike together some object.} \\ \text{nú-ra, ye strike.} \\ \text{bá-ra, they strike.} \end{array} \right.$

A single tense given above will suffice for the object we had in view.

A few illustrations must close this branch of our subject.

ENGLISH SENTENCES.

Ngán ke bi? Ngatoa.

Who are you? It is I.

Who be thou? It is I.

Kore unni, nukung unnoa.

This is a man, that a woman.

Man this, woman that.

Wakun to minnaring tatán?

What does the crow eat?

Crow what eats?

Wontakal bara?

What countrymen are they?

What place of they?

England kal bára.

They are Englishmen.

England of they.

Munni noa katéa kan.

He is sick again.

Sick he is become again.

Búntállá tia bara wonnai

They beat me when I was a

Struck me they child child.

bám ba.

I as.

As we have thus at random given a few specimens of the language of New South Wales, it may not be amiss to add vocabularies of the languages, or rather, dialects formerly in use

by the natives of Van Diemen's Land. These vocabularies are interesting as belonging to a race all but extinct, who only a few years ago were the terror of all the inhabitants of that colony, but whose peaceful capture and safe transmission to Flinder's Island reflect so much credit on the judgment of the late Lieutenant-Governor of Van Diemen's Land, Sir George Arthur.

NATIVE LANGUAGES OF VAN DIEMEN'S LAND.

EASTERN LANGUAGE.

Lalena, <i>day</i> .	Trew, <i>fist</i> .
Lutregela, <i>fine day</i> .	Niparana, <i>face</i> .
Lamilbena, <i>drake</i> .	Gunta, <i>earth, or ground</i> .
Malbina, <i>wild drake</i> .	Robenganna, <i>goose</i> .
Lewnana, <i>den</i> .	Rowennana, <i>gull</i> .
Lugana, <i>to drink</i> .	Rodidana, <i>grass</i> .
Waldeapowt, <i>to-day</i> .	Leguma, <i>dress, or covering</i> .
Magra, <i>a day</i> .	Lila, <i>gun</i> .
Comtena, <i>dog</i> .	Comthenana, <i>grass tree</i> .
Catrabuteany, <i>dry</i> .	Ludeneny, <i>girl</i> .
Rekuna, <i>emu</i> .	Tabelty, <i>go on, walk</i> .
Lepena, <i>eye</i> .	Enganama, <i>eagle hawk</i> .
Legana, <i>evacuate</i> .	Pueta, <i>black hawk</i> .
Pelverata, <i>ears</i> .	Pathenanaddie, <i>head</i> .
Rowella, <i>elbow</i> .	Lethana, <i>hair</i> .
Pinega, <i>flying</i> .	Anamana, <i>hand</i> .
Uta, <i>frost</i> .	Lewrewagera, <i>island</i> .
Ragana, <i>forest doe</i> .	Lachranala, <i>large island</i> .
Munwaddia, <i>feathers</i> .	Nannabenana, <i>knee</i> .
Munbamana, <i>father</i> .	Mengana, <i>get</i> .
Pulbena, <i>frog</i> .	Bungana, <i>king, or chief</i> .
Muna, <i>fog</i> .	Kigranana, <i>kangaroo pouch</i> .
Langana, <i>foot</i> .	Reprenana, <i>kangaroo rat</i> .

Canara, <i>or</i> cuiena, <i>little</i> .	Crackeunicka, <i>sit down</i> .
Plerenny, <i>lad, or boy</i> .	Ganna, <i>teeth</i> .
Lathanama, <i>leg</i> .	Mena, <i>tongue</i> .
Canara, <i>magpie</i> .	Camena, <i>chin</i> .

thea.

Tunapee, *to know.*

Palewaredia, *black man.*

Numeraredia, *white man.*

Lubra, *woman.*

Par-me-ry, *one.*

Cal-a-ba-wa, *two.**

I love you.

I'll go and hunt.

*I see a vessel on the water,
sailing fast, but she is a
long way at sea.*

*When I went hunting, I killed
no less than one walloby,
one kangaroo, two badgers,
and one black swan, and
being hungry, I felt in my
pocket for my fire-works,
in order to make a fire and
cook some of my game, but
I found none. I therefore
had to walk home before I
broke my fast.*

*When I returned to my coun-
try, I went hunting, but
did not kill one head of game.
The white man make their
dogs wander and kill all the
game, and they only want
the skins.*

* For a higher number than two, the native blacks always say *Car-di-a*.

A SONG.

Taby-ba-tea-mocha-my boey-wa
 Taby-ba-tea-mocha-my boey-wa
 Taby-ba-tea-mocha-my boey-wa
 Loma-ta-roch-a-ba-long-a ra
 Loma-ta-roch-a-ba-long-a ra.

SONG.

Poo-ye-carne-koon a meta
 Num ba, keta-rel-ba-ena
 Too-ya-wa-ta-loo-ta-warra
 Koon-a-meta pan-ta war-ra
 A-ka-la-leba-iony-eta
 A-ka-ba-mar-keen-a.

SONG.

A-re-na-too
 Ket-a-ta-e-vepa
 Mel-rè pa-too
 A-re-na-too.

SONG.

Ne-par-me-ry-wa
 Ne-cat a ba wa
 Ne-par-me ry wa
 Ne-cat a ba wa.

With respect to the luxuries we have introduced amongst the Aborigines, they preserve the English names with a very little variation, which may be observed in the above song, such as *tea-boey*, (boy.) *Wa!* is an exclamation of surprise, and sometimes of satisfaction.

GENESIS.

CHAPTER I.

1. In the beginning God created the heavens and the earth.

2. And darkness was upon the face of the deep.

3. God said let there be light, and there was light.

4. And God saw the light that it was good, and God divided the light from the darkness.

5. God said let the earth bring forth grass, and it was so.

16. God made two great lights, the greater light to rule the day, and the lesser light to rule the night, he made the stars.

17. God set them in the firmament of heaven to give light upon the earth.

21. God made great whales, and every living creature that moveth which the water brought forth abundantly.

25. And God made the beast of the earth and he saw it was good.

26. And God said let us make man in our own image, after our own likeness.

27. And God created man in his own image.

31. And God saw every thing he had made, and behold, it was very good.

TRANSLATION.

(BY WILKINSON, AT FLINDER'S ISLAND.)

1. Trota, Godna pomale heavena coantana.
2. Lewara crackne.
3. Godna carne, tretetea, tretetea, crackne.
4. Godna capra tretetea lawarra.
5. Godna carne coantana, nigane rothana rotana tibra.
16. Godna pomale cathabewa tretetea lackrana wahalenna narra pomale purlanna.
17. Godna propara narra wealicatta tringane trecktea.
21. Godna pomale lackrane penungana, cardea penungana.
25. Godna pomale panalla, illa, tabela, sheepana, Godna capra narra coopa.
26. Godna carne, mena pomale, wibeelicka mena.
27. Godna pomale wibalicka narra.
31. Godna capra, cardea, narra pomale, narra carne—narra coopa ! coopa !

The letters F, S, V, X, and Z, seem to be excluded from all the vocabularies before me, and as they are likewise wanting to the language of New Holland, it speaks in favour of a common origin.

I am at a loss to decide the manner in which the Aborigines of this island apply the article, but I imagine it is found at the end of the substantive, as was the practice of our Scandinavian ancestors, and is so at this day amongst some of the northern nations of Europe. For example: Herremand signifies Squire in the Swedish language. In England we should say *the* Squire; but in Sweden, Herremanden, thus placing the article at the end.

I have put down the words as I found them, but to meet the correct pronunciation, we should add the soft *h* where any word ends with an *a*. The name of the late chief of Cape Portland is generally written "Manalarguna," but the true way of spelling it would be "Mannalargunah."

Since giving the reader the above vocabularies, I have observed in one of the public records, several words which could by no possibility belong to any of the three languages named. This exceedingly perplexed me, and I wrote to a friend at Flinder's Island to furnish me with some explanation, which could easily be obtained from the Aborigines. I have recently received a letter on the subject, and now find that there

are actually four Aboriginal languages:—that of Circular Head is different from the others. However, some common and strange words are introduced, which I mark in italics. It is also remarkable, that although the black natives of Van Diemen's Land have been at the depôt several years, they have made little or no progress. Their words are limited to things actually seen, but we find some applicable to the affections of the mind and the heart. All the words without exception, end with an “*a*,” and I strongly suspect that the words of the other languages ought to have a similar termination, although the ear may not have caught the right sound.

I also infer from the termination of “*a*” in the various languages, that they must have had one common origin.

CIRCULAR HEAD.

Moon, <i>webba</i> .	Fire-wood, <i>walliga</i> .
Sun, <i>loyna</i> .	Eat, (<i>giblee</i>) <i>newenna</i> .
Star, <i>murdunna</i> .	Fire, <i>leipa</i> .
Fresh water, <i>moka</i> .	Ground, <i>longa</i> .
Sea, <i>neetraba</i> .	Night, <i>crowrowa</i> .
Break wind, or hut, <i>tama lee-</i>	Day, <i>loyowibba</i> .
<i>berinna</i> .	Rain, <i>talawa</i> .
Crow, <i>lina</i> .	Rain drops, <i>reidena</i> .
Parrott, <i>carcuca</i> .	Wind, <i>loyoranna</i> .
Swan, <i>cocha</i> .	Crystal, <i>steka</i> .
Eggs, <i>palinna</i> .	Spear, <i>raccah</i> .
Blow-flies, <i>mounnga</i> .	Waddie, <i>rocah</i> .

To cry, <i>targa</i> .	

Amongst the most interesting of the manners and customs of the blacks, of Australia and Van Diemen's Land, are the ceremonies observed with respect to the disposal of their dead.

In Van Diemen's Land it was observed that different tribes buried their dead in different manners. Those to the south were burned, a large pile of wood having previously been heaped up and set fire to; for scarcely was the body dead before it was placed among the flames, and even when it appeared that a native could not long survive, preparations were made for consuming the body the very moment life had fled.

Other tribes, again, when it was not convenient to carry off the dead body to some place of inter-

ment, would put it into some hollow tree, in as upright a position as possible; and to preserve him in this position, a spear was struck through his neck into the tree. Another spear was left with the dead, in the same manner as our Scandinavian ancestors deposited the arms of the departed warrior with him in the grave. The Aborigines could assign no other reason for burying their dead in an erect posture, except custom.

Whenever they approached places where any of their countrymen had been so deposited, they would on all future occasions avoid coming near such spots, and would rather go miles round than pass close to them. Nothing could offend an Aborigine so much as to speak of, or inquire about his dead friends or relations.

There is a part of the island, consisting of large plains, beyond the River Ouse, in a north-west direction, where the various tribes of the eastward and interior used to meet, in the month of November, every year, there to hold a grand corrobory, and to exhibit feats, and to engage in certain sports in which they took a lively interest. Mr. Jorgenson, in 1829, thinking to fall in with them on the plains, himself headed one of his parties, and ordered two other of his roving bands to take a circuitous route, so as to meet nearly at the same time at Lake Fergas, on the southern extremes of the plains.

This year, however, the blacks did not assemble

at the usual place, for fear of being surprised. On Mr. Jorgenson's return, passing down from Lake Echo to the Shannon Point, in one of his journals I find the following description, which I quote in his own words :

• “ In passing slowly down the western side of the Shannon, Mungo, our black guide, arrested our attention. He conducted us to a number of large rocks, some projecting a considerable distance over the gully below ; and extremely difficult of access. Under one of these projecting rocks, we found a species of cave, where Mungo pointed to a heap of flagstones, round which were placed, in a very compact manner, pieces of gum-bark, the whole appearing altogether as a small pyramid. This was a grave, and in the middle of it was deposited a spear, pointed to the depth of two feet, and the upper end of it pointed with a human bone. We opened the grave with our bayonets, and in so doing, we met with several layers of flat stones, placed in such a manner, that an English resurrection-man would find it more difficult to open one of those graves than most in one of our church-yards.

“ At the bottom, we found some human bones, which, from the state they were in, clearly indicated that they had for a long time remained in the grave. After examining the grave with its contents, we again placed everything as we had found it, and covered the grave, in like manner,

with the stones and the gumbark, so as to avoid giving offence to Mungo, who did not behold unmoved our sacrilegious invasion of the solemn and silent repository of one of his countrymen, whom he described as a great warrior from the circumstances of his burial. When I asked Mungo the reason of the spear being stuck into the tomb, he replied quietly, 'to fight with when he is asleep.' He also confirmed the generally received opinion, that the Aborigines buried their dead in an erect position."

So far Mr. Jorgenson, yet to me it would appear from the foregoing, that the Aborigines must entertain some faint notions of a future state, and that connected with some sort of warfare. Many ancient nations, as I have before observed, used to deposit in the grave with a departed warrior, his arms and other trophies. At the time I speak of, the words "dead" and "sleep" were synonymous with the black natives of Van Diemen's Land.

We have thus hastily put together some of the information we possess respecting these interesting races of beings. We could not avoid introducing a few remarks on the language of the Van Diemen's Land natives, though somewhat out of place, as they are, ere long, to be numbered with those things that once were, but are gone for ever. Those of New Holland still remain, and difficult as is the subject of their treatment, we do sincerely trust that their claims upon us, who have invaded

and taken possession of their hunting grounds, may not be forgotten. We cannot do better than close with an extract from a late despatch of Lord Stanley's on this subject to Sir George Gipps :—

“I cannot conclude this despatch without expressing my sense of the importance of the subject of it, and my hope that your experience may enable you to suggest some general plan by which we may acquit ourselves of the obligations which we owe towards this helpless race of beings. I should not, without extreme reluctance, admit that nothing can be done—that with respect to them alone the doctrines of christianity must be inoperative, and the advantages of civilization incommunicable. I cannot acquiesce in the theory that they are incapable of improvement, and that their extinction, before the advance of the white settler, is a necessity which it is impossible to control. I recommend them to your protection, and favourable consideration with the greatest earnestness, but, at the same time, with perfect confidence, and, I assure you, that I shall be willing and anxious to co-operate with you in any arrangement for their civilization which may hold out a fair prospect of success.”

CHAPTER VII.

SYDNEY AND ITS ENVIRONS.

SYDNEY, the metropolis of Australia, is situate in $33^{\circ} 52'$ south latitude, and $151^{\circ} 17'$ east longitude. It derived its name from Lord Sydney, his Majesty's Secretary of State for the Colonies, at the period when this territory was formally taken possession of by the British Crown. The harbour to the town is called Port Jackson, and the story most current tells us that it received this appellation from the name of the man at the mast-head, who first discovered it. Australians are accustomed to vaunt themselves on their harbour being capable of containing the shipping of a world. We believe it is, and for beauty, as well as capacity, it is scarcely equalled, certainly not surpassed, by any known port. Well do we remember the thrill of rapture with which we welcomed its splendid scenery, as it first burst upon us on a fine Australian autumn day, and that too after a long baffling with waves, buffeting with storms, patient

endurance of calms, and all the monotony of a sea voyage, interrupted only by the shock of a tempest ; by the terror of an adverse gale. The inlet into this harbour from the broad Pacific, is by an opening of nearly two miles in breadth, guarded on either side by bold majestic headlands, known by the names of the North and South Heads. Sailing up, beauties present themselves continually. The wooded shores, with the neat cottage or the stately mansion peeping from among the trees, the little islands with which the waters are dotted, the noble vessels riding at anchor, the steamers and small craft plying about, the view of the town with its spires, its smoking chimnies and its windmills ; these, and more than these, present so many objects to the delighted gaze, that we may well pardon those who boast, with no little pride, of so magnificent an ornament to their town, so splendid a minister to their opulence, their health and their enjoyments too. Different points of land present themselves in our progress up the harbour. First we are struck with a bold headland, called Middle Head, which forms the separating point between Middle Harbour and Port Jackson. A little farther on we come to Watson's Bay, Vacluse (the beautiful seat of W. C. Wentworth, Esq., one of our city members), George's Head, Shark Island, Bradley's Head, and a little to the right of the last mentioned, is a small island rock, known by the not very elegant name of Pinchgut, so

called, it is believed, from the circumstance of some poor unfortunate having been confined there with but a meagre supply of the good things of this life. A small reef goes by the very classical appellation of the "Sow and Pigs. Many bays of greater or less extent and beauty are formed by the undulations of the shore on each side, and often islands diversify and adorn the scene. The largest is called Garden Island, and is rightly so designated. It is a beautiful retired spot. Here rest in peace all that remains of Mr. Bent, formerly Judge Advocate of New South Wales, and Brigadier Major Ovens, formerly private secretary, &c., to Sir Thomas Brisbane. One can scarcely imagine a more peaceful scene. Their requiem is now sung by the soft ripple of the waters breaking on the pebbly beach, and the sighing of the zephyrs among the trees that overshadow their resting-place. This is one of the largest islands in our harbour, containing about nine or ten acres. Hither the citizen, hackneyed in business, tired even to nausea of the scenes in the bustling world around him, hither he delights to retreat, and, in its woody recesses, feels himself almost secluded from the world, except, indeed, as nature's softest, purest scenes are stretched before him, and he thus learns directly to rise from "nature up to nature's God;" the best feelings of the soul may here be excited; the trees, the rippling streams have voices which speak of God; the graves of the departed lead to serious

and devout contemplation, and on this island altar many a sacrifice, we believe, has been and yet will be offered up to the God, who has so beautifully invested this scene with softness and grace.

“The calm retreat, the silent shade,
With prayer and praise agree,
And seem by Thy sweet bounty made
For those who follow Thee.”

Whatever part of the harbour may be observed, the same picturesque beauty strikes us at every side. Each one, according to his own past associations, connects these beauties with those which, in other lands, he has held and still holds dear. The Scotchman thinks of his Loch Katrine, and Loch Lomond; the son of Erin remembers the Lakes of Killarney; and the traveller almost imagines himself going on the Lago Maggiore, or the Lakes of Geneva, and Neufchatel. To each of these have we heard different points of our harbour, as seen from different parts of the town and neighbourhood, compared; and yet it has something peculiar to itself, something which distinguishes it from all other spots, and clothes it with a beauty in which nought besides stands invested. Strangers may, perhaps, imagine we are painting this picture in colours too bright; Australians, and those who know the scenes to which we refer, will, we are sure, chide us for the imperfect outline we have presented: suffice it to say, that we are almost persuaded of the truth of a remark, made by a

fellow-passenger as our ship sailed up this harbour, who, after enumerating some of the dangers and annoyances of a tedious voyage, while gazing on either shore, and the thousand beauties all around, exclaimed with enthusiasm “ this sight atones for all !” Before we conducted our traveller so far, we should have directed his attention to that object which is the first signal of land to the weary mariner on the Broad Pacific. We refer to the Light House. This beacon forms no unimportant and uninteresting feature in the scene. It is situate on the South Head, and was erected by Governor Macquarie. It stands at a considerable elevation above the level of the sea, and, by its revolving light, guards from the dangers and terrors of the deep. This is a sight always beheld with pleasure, whether regarded as a safe-guard against dangers, of which there is no other warning, or as a land-mark—the first land-mark which strikes the attention, which repays for the toils of the voyage, and welcomes the stranger to new shores. By its elevated situation, it is also visible from many parts of the town, and from the many associations necessarily connected with it, forms a pleasing object. To this point the citizens are accustomed to direct their excursions on days of pleasure and freedom from business: it is about seven or eight miles distant from the town. It has been complained that Sydney is but imperfectly fortified: On Bradley’s Head, and the

Island of Pinchgut, forts have been erected, and considerably nearer the town are Dawes' Battery and Macquarie Fort; the latter, however, is now being dismounted. Dawe's Battery is not very plentifully supplied at present with any large pieces, and may the day be far, very far distant, when they may be required. From this point guns are fired on occasion of her Majesty's birth-day and other gala days, and happy shall we be, if we never need it for any less peaceful purposes. We must not omit to observe that from either of the two forts, a very beautiful view of the harbour is afforded. From the latter (Macquarie Fort) the view is diversified by a more complete view of the town than is obtained from any points to which we have before referred. At the extreme north end of the town, on an eminence, on which formerly stood Government House, is the Flag Staff, which receiving its signal of the arrival of vessels from a similar station at South Head, communicates the information by a set of well understood signals through the town itself, and again to another telegraph situate six or seven miles from the town.

We will now suppose a voyager who has entered the Heads, and sailed up the harbour, landing at Queen's Wharf, and just setting his foot on the shores of Sydney. He will see along side this wharf, vessels loading and unloading, small colonial

vessels which trade along the coast, and numerous small boats whose owners will be lazily sauntering on the Quay, or on the "qui vive" for a fare. Having got clear from these, he turns to the left, and finds himself in George Street, the street, which in Sydney, answers to the High Street of English Market Towns, or, in other words, is the street for business. From one extremity to the other, it is nearly two miles, and is intersected by a great number of other streets, lanes, &c. It was called George Street, from his late Majesty George the Third. Many streets in Sydney derive their names from late Members of the Royal House, or Ministers of the Crown. Hence we have York, Sussex, Clarence, Kent, Cambridge, Cumberland, Gloucester, and Pitt, Castlereagh, Bathurst, Liverpool, and Goulburn Streets. Some also receive their appellations from former Governors of the colony, as Hunter, King, Bligh, Phillip, and Macquarie Streets. But we have left our Traveller in George Street, not knowing which way to proceed, and he has taken the opportunity of looking at the "Australian Hotel," which is the first house he sees as he passes up the street. We know not what may be the feelings of others, as they, for the first time, walk up this street; we know only in our own case, they were feelings of peculiar admiration for "Old England," whose enterprise had extended so far from her own little sea-girt Isle,

formed a flourishing colony almost at the antipodes, and there completely stamped her own impress.

The hotel to which we have referred, is a neat, respectable house, mostly resorted to by those concerned with the shipping interest. The farther we proceed, the more shall we see the proofs of business around us. The merchant's store well loaded with goods, the tradesman's shop tastefully laid out, tempting the purchaser, the vehicles of every kind, and even the hackney coaches and cabs, which are seen plying about in all parts of Sydney and its suburbs, crowding the public road, and the busy foot-passengers jostling each other on the pavement: all these prove the existence, and the extension, too, of trade and commerce. One of the first buildings with which the stranger is pleased, is the Bank of Australasia, a handsome building. This is known to be a branch of a London company, incorporated by royal charter, and in comparison to Colonial Banks, has been called the "Goliath." The hours of business at this, and the other Banks are from ten to three, except on Saturdays, when they close at one. The Bank of Australasia is a handsome building, containing extensive offices for the transaction of business, and a dwelling house for the managing director.

We should not have passed by without notice the extensive auction-rooms and handsome dwelling house of Mr. Lyons, the principal auctioneer in the

town. Pursuing our course up George Street, and, passing in our way some well-arranged shops and large stores, auction-rooms, &c., we must just stop a moment at the Bank of New South Wales, the oldest in the colony, and, as its name implies, a Colonial Company; it has nothing particularly to attract notice; it has a dwelling-house for the cashier of the Bank, and has one advantage which other Banks do not possess—in being contained within railings, standing at a distance, from the public road. Opposite to this building are the Military Barracks, which are well adapted for their purpose. Military Barracks have a similarity in their arrangement wherever we see them. They form a thoroughfare from George Street to other parts of the town. If we were inclined to make any objection, it would be to their position. We do not see any good end to be accomplished, but rather evil likely to arise from their being situate in the heart of the town.

New Barracks are now in course of erection at a convenient distance from the bustle of Sydney, and it is to be hoped will be constructed on a more extensive scale, as now tents are pitched for the temporary accommodation of those men for whom there is no other room. In this climate it must be obvious that the evil effect of this will be very great. We say in this climate, because, beautiful as is the temperature of Australia, we are yet subject to many sudden changes, from which it requires

care to prevent evil consequences. The Post-office is situate in George Street, a little above the Bank of New South Wales. It is divided into two compartments, the one for the delivery, the other for the receipt of letters. Its hours for transacting business are from nine to six. This is the only depôt for all communication by letter for Sydney and the suburbs for six or seven miles round. Branch offices on the plan of two-penny-post receiving houses in London, will, doubtless, soon be established as the population and business of the town increase. At five p.m. the inland mails leave; and this is, consequently, the busy time at this office. We then see a faint resemblance to that inspiring scene which takes place at St. Martin's-le-Grand at eight o'clock, p.m.

We have some very respectable mail-coaches, reminding the English traveller of former days; and the postman's horn is heard throughout the streets of our crowded metropolis, and twangs over the bridges and valleys of our smaller towns. We must pay a passing compliment to the regularity with which this department of the public service is conducted. The business is most extensive, and is, on the whole, managed with commendable accuracy and despatch by James Raymond, Esq., Post-Master General, and his subordinates.

The number of letters despatched from this office in the year 1843 (taking the four months from May to August as an average) was 822,773.

The number of Newspapers in the same period was 905,709 : comparing this with similar returns in 1837, we find the number of letters has increased in these six years $2\frac{1}{3}$ fold, and newspapers $3\frac{1}{2}$. The average number of letters to each person in the colony is 5.14, of newspapers 5.66. The charges are in some cases high, owing to the difficulty of rapid communication. We pay far less for letters from our friends at home, than we do from those in any part of the colony, even from the nearest post-town, distant only fifteen miles from Sydney. It has been proposed to establish a cheap uniform rate of postage, but whether the plan will be at present carried into operation is doubtful. The sum derived by the Colonial revenue in 1843 from Post Office collections was £16,566. 9s. 3d.

We must speak in high terms of commendation of the arrangements for markets. The whole market is divided into four large sheds. One is occupied by butchers and poulterers, containing thirty-six stalls. Another by the venders of fruits and vegetables with thirty-three stalls. The other two are less used, one being principally devoted to the sale of potatoes and other vegetables on a large scale, and the fourth is scarcely used, except on public occasions, for city meetings, and twice a year for a show of flowers, vegetables, &c., under the direction of the Australian Floral and Horticultural Society. The internal arrangements are under the control

of the City Corporation, and are similar to those prevailing in most market towns at home.

We must speak in high terms of the order and cleanliness which prevail in these buildings. They are open every day in the week from six o'clock in the morning till sunset, and on Saturday till eleven, p.m. The market on Saturday evening is a favourite rendezvous for the strollers, some of whom may, indeed, be looking for a Sunday's dinner, but others of whom are simply passing away a vacant hour. In an abundant fruit season, it is a delightful and peculiarly grateful thing to see the well stocked stalls with the fine fresh fruit just brought in from the surrounding country. Really, we have no cause to be ashamed of our market (which is a little Covent Garden) in its measure.

Next to the market, is the Sydney Police Office, where business is transacted. It is one of the earliest among the buildings we have mentioned. It stands back from the street, having a large yard before its entrance. It is divided into two Courts, —the one is generally devoted to the trial of Free, the other of Convict offenders. In addition to these, there are rooms for Magistrates, Offices for Clerks, &c. The Police of Sydney is under the direction of a Commissioner, and the Force, at present, consists of one Commissioner, one Chief Constable, one Assistant Constable, four Inspectors, thirteen Serjeants, and seventy Constables. In this department, our city has considerably improved

of late years ; it yet needs a more complete cleansing from defects and errors of former systems.

The salaries should be sufficiently high to induce men of character to enter the corps, and the fees upon the detection of crimes should be regularly arranged on such a scale, and with such restrictions, that no encouragement should be afforded to a hateful system of intrusive espionage, nor should men find it (as they have too often) a much more profitable thing to detect a slight violation of some particular act, than to punish the grosser outrage upon morality and social order. We must not leave the main street without noticing the Royal Hotel, a building which we hesitate not to say would be an ornament to any city in the world. The extent of the lower saloon may be estimated when it is stated that here upwards of three hundred sat down to dinner on occasion of a grand civic feast given by the first Mayor of Sydney.

On the first floor are sitting-rooms, which open into a verandah, and which are separated from each other by folding doors, and which when thrown open present a room seventy feet in length. The bed-rooms on the upper floor are commodious and airy. From the top of the house a fine panoramic view of the town is presented. The wings are arranged for the accommodation of private families, and settlers from the interior. All the necessary and usual accommodations in an hotel are on an equally superior scale.

Behind the market, are the City Council Chambers. Sydney was favoured with a Municipal Corporation in 1842, and the first election of Councillors, &c., took place on the 1st of November in that year. The Corporation, as now constituted, consists of twenty-four Councillors, from whom are elected by the Council, six Aldermen, one of whom acts as Mayor. The whole city is divided into six wards, bearing the following names : Bourke, Macquarie, Phillip, Brisbane, Gipps and Cook wards. The name of the last is derived, of course, from the immortal Captain Cook ; the others, as will be at once observed, from the present and past Governors of the Colony. The building now set apart for the use of this body is a neat substantial structure, but has nothing particularly to call for notice. It was formerly used as an hotel, but is now materially changed, of course, in its internal arrangements. The Council-room is handsomely furnished ; and offices are scattered through the building for those who transact the business of the Corporation. The late Mayor, Mr. Alderman Wilshire, and many of the Councillors, are natives of Australia.

A few steps from the Council Chambers, situate also in York Street, is one of the neatest buildings Sydney can boast—the Jews' Synagogue, lately erected by that body. They were accustomed formerly to meet in a room ; but having received a piece of land by the liberality

of a private individual, they have built this handsome structure. The windows of stained glass add a beauty to the building, and give a soft religious light in the interior. The edifice is not large, but sufficiently so for all the purposes required. We will now return into George Street, and turning down one of the streets running eastward from the main thoroughfare, we shall find ourselves in Pitt Street. This street runs parallel to George Street; and parallel to it again are Castlereagh, Elizabeth, and Macquarie Streets. These are intersected by streets running at right angles, serving the purposes of communication with the farther eastern extremity, and connecting the intermediate streets with the chief line of traffic.

A similar arrangement prevails on the western side. In Pitt Street, we observe the Mechanics' School of Arts, which has no attractions as a building, but which deserves notice as an important and valuable institution in our rising town. It contains a lecture-room, capable of containing from three hundred to four hundred persons, a library of tolerable extent, and a set of rooms for the librarian, who resides on the premises. It numbers at present, two hundred and eighty-two members. Here lectures are delivered in the winter season, on subjects of science (the institution possessing a good philosophical apparatus), and general literature. Classes for music and drawing have been formed,

and also a debating society, which holds its meetings once a week in the season. It is a favourable feature of our community, that it is a reading community, and if information be conveyed in a pleasing and attractive form, we shall find many anxious to avail themselves of it.

Pursuing our course, we cannot fail to notice, as we pass down Pitt Street, the handsome shops occupied by linen-drapers. Whether we regard the excellence of their arrangements, the sterling value of the commodities, the costliness of their large and showy windows, and, at night, the glistening splendour of their lamps, sometimes most tastefully ornamented, we cannot but feel proud of our city, and even the stranger must acknowledge that these houses of business would not disgrace any of our older towns in the mother country.

The theatre, known by the name of the Royal Victoria Theatre, is situate in this street. It is an elegant little building, having a very extensive stage, two tiers of boxes, the dress and upper circle, a pit, and gallery. The prices of admission are: dress circle, 4s.; upper boxes, 2s. 6d.; pit, 1s.; and gallery, 6d. The house is open every night. Most of the strangers who visit it are struck with the size and neatness of this place of public amusement. The character of the performances, too, is generally respectable. Although we can seldom attempt the higher walks of tragedy, we have yet made successful "hits" with domestic

dramas, comedies, and farces. Our pantomimic corps is strong, and with the return of Christmas, we have always our full force brought into requisition.

At the present time, some of the most popular operas are being brought out with commendable care and correctness. The following are taken at random as some of the pieces performed during the last twelve months:—"William Tell," "Brutus," "Luke the Labourer," "The Irish Tutor," "Hamlet," "Macbeth," "The Waterman," "The School for Scandal," "The Rivals," "The Seven Sisters," "The Hibernian Father," "Love, Law, and Physic," "The Pilot," "Guy Mannering," "Rob Roy," "La Sonnambula," "Cinderella," &c.

We may also congratulate ourselves that we have as little vice in connection with the theatre, either before or behind the curtain, as in most towns of the same size; nay, far less, when it is remembered we are an extensive sea-port, and when the character of some of our population is taken into consideration. This remark may, indeed, be applied to the moral state of our town in general, which, as far as outward decency goes, is in a tolerably healthy state.

The next public building of any importance which will attract the attention of the traveller through Sydney, is the Union Bank of Australia. This has always struck us as one of the neatest structures our Australian metropolis can boast. It

is situate at the junction of Pitt and Hunter Streets, and comprises, as do the other banks to which we have referred, a dwelling-house for the Managing Director. It is built of stone, obtained from the quarries in the neighbourhood of the town.

Crossing Hunter Street, we enter O'Connell Street. Start not, gentle reader, at the name; the place bearing this designation is calm and peaceful as you can desire. We have no "agitation" here, save the calm agitation of shrubs and flowers which adorn the little gardens smiling on either side, fanned as they are by soft zephyrs, gaily playing around. Whatever opinion may be entertained of the name, but one can be held regarding the street. It is one of the most "tasty" in Sydney. The houses, as we have already hinted, have gardens before them, some of which are kept with much neatness by their careful owners. Here may be seen our native and English plants, vying which shall outshine the other, which shall more adorn the garden-plot, which more perfume the air. O'Connell Street received its name in honour of the worthy Commander of the Forces, Sir Maurice O'Connell.

At the junction of this and Bent Streets, stands the Club House. We, of course, do not boast of the splendid external appearance or magnificent internal decorations which the celebrated club houses of London present. The house to which we now refer has, on one side of the entrance hall,

a spacious reading-room. The rest of the establishment is fitted up in the usual way, and is possessed of the usual accommodations. The institution has a fair measure of support, especially from the respectable settlers in the interior of the country.

It is proposed to continue the line of Pitt Street, carrying it on to the Quay ; it will thus be rendered the main street in the town ; and, when completed, the line of road for traffic, nearly two miles in length, will, besides its vast accommodation, be no small ornament to our fair city. We may remark of the streets of Sydney generally, that they are very regular and well formed. Pitt Street and Castlereagh Street are almost in straight lines, though each extends about a mile and a half.

In the immediate neighbourhood, is situate the Government House. We cannot speak in terms of very high commendation of this vice-regal dwelling. It presents nothing more for notice than can be obtained from the house of any gentleman of moderate fortune. It commands a beautiful view from the front verandah, and though situate within five minutes' walk of the bustle of the town, is yet delightfully retired. Its situation is, indeed, well chosen, being in the immediate vicinity of almost all the public offices. The internal arrangements are, for the most part, as good as the contracted space will allow. The principal room,

the ball-room, is accustomed to present a gay appearance on occasion of entertainments given by the Governor of the time; but none of the apartments have anything to recommend them in size or elegance.

The reproach of having a mean dwelling for a Governor, is now, however, wiped away, for the new Government House, of which we shall have occasion to speak presently, leaves nothing to be desired. Near to the house now occupied by his Excellency, stands a building which attracts the notice of every visitor. It is of brick, and has something about it of the style of old baronial buildings, mentioned in chivalry and romance. The visitor, however, on coming near to it, is disappointed in what he thought its extent, and is still more surprised to find that the use to which it is appropriated, is to provide a dwelling for those quadrupeds which wait on his Excellency's pleasure, and are to be ready to his command. In simple truth, this is the government stables, though some have been disrespectful enough (and we confess ourselves among the number), as they have seen it for the first time at a distance, to mistake it for the residence of Royalty's representative. Really the mistake is pardonable.

The new Government House deserves more than a passing notice. It is, in every respect, worthy of the colony. We may, indeed, say that it is no

little honour to the colony to be able to point to this as a colonial work. This building was commenced in 1837. The plan and elevation being designed by E. Blore, Esq., architect, in London, and the erection entrusted to M. W. Lewis, Esq., the colonial architect; colonial builders contracted for different parts of the work, and to a great extent, the materials employed in the building and ornament of this edifice are colonial.

“The main body of the building,” we quote from an account contained in the *New South Wales Magazine* for July, 1843, “is 170 feet long and $40\frac{1}{2}$ feet high. The part at the north end being an addition to the original plan, and comprising the butler’s pantry, housekeeper’s rooms, servants’ hall, kitchen, &c., is 70 feet long. On the eastern side are situate the ball-room, 50 feet by 28 feet, exclusive of the orchestra; the drawing-room, 40 feet by 28 feet, (having also a large recess in a bay-window), and the ante-drawing-room 15 feet by 28 feet. This suite of rooms, which communicate by folding-doors, when thrown open, extends 105 feet. The dining-room is a well-proportioned and elegant room, lying transversely to the rooms just described, measuring 45 feet by 26 feet. The whole of these rooms are 26 feet high, and are finished in a superior style.”

After being ushered into the entrance hall, from a porch situate to the left in our view, we enter

another hall, from the centre of which rises a remarkably fine stair-case, which branches off on either side, communicating with the audience, private secretary's, and aide-de-camp's rooms, &c. This stair-case is really a noble specimen of Australian workmanship, and is built of cedar. The chimney-pieces are all of colonial marble. So much for the interior. Of the exterior a correct view is presented in our sketch. The tower at the

New Government House.

north end is 20 feet square, and 70 feet high from the base; the flag-staff is 30 feet high. The stacks of chimnies, rising 13 feet above the roof, are of exquisite workmanship, and tend not a little to add to the beauty of the whole edifice. Two

turrets will be observed on either side of the entrance porch ; these are 70 feet high, standing prominent $10\frac{1}{2}$ feet from the building ; between these extends an arch, surmounted with the royal arms.

Our minuteness in describing these particulars has arisen from a desire to award due praise to those who have reared in this Australian capital so handsome a structure, reminding the traveller of the castellated edifices of ancient times, as also to show by the detail of figures, that, separated as we are by continents and oceans from our father-land, we have yet the pride of the British-born to rear in their land such buildings as their sons may be proud to contemplate ; structures so firm and enduring, that the storm may shake, but cannot destroy ; time may wear, but cannot consume. May the solidity, the splendour, and elegance, of this vice-royal mansion be an emblem of Australia's future history. Firm may she be in substantial wealth, rendered magnificent by the character of those who shall be nursed in her bosom, and adorned with every grace which growing civilization, extended knowledge and widespread religion, can impart. This mansion is not yet occupied by the Governor, though the ball-room, &c., were opened by his Excellency Sir George Gipps, 24th May, 1843, on occasion of the ball given, according to annual custom, on her Majesty's birth-day.

The buildings extending to the right are the Government stables, to which we have referred. The statue of Sir Richard Bourke, the late Governor, is itself a fine specimen of workmanship, having been executed by Bailey. It bears a lengthy inscription, containing a flattering eulogium on Sir Richard. It was opened to the public on the 11th of April, 1842, which became a general holiday through the town, and on which occasion, his Excellency, the present Governor, in a speech he then delivered, declared that the view presented from this spot equalled in loveliness any scene in the known world. We cannot, bold as is this assertion, accuse his Excellency of exaggeration. It stands at the head of a long wide gravel-walk, leading to the Government Domain and Botanical Gardens, to which we shall advert presently; it overlooks, as will be seen, a considerable part of the harbour; in its immediate vicinity smile green fields, and the native shrubs scattered here and there in the landscape, add grace and loveliness to the scene. The white turrets of the Government House, sparkling in the sun, raise their tops above the trees. On the farther shore is the rugged beauty of natural fertility, diversified here and there by the studied grace of artificial cultivation; here and there peep a few chimneys to speak of the dwellings of man; while about the harbour are to be seen ships of every size, spreading their sails to catch the prosperous winds of Heaven, and cutting

gracefully through the waters, which as they disturb they adorn.

The whole scene is one of real enchantment : not one feature is wanting to make this spot of observation one of surpassing loveliness. Nature has clothed herself in her gayest and softest dress : she walks on the headlands, scattering her every grace ; she broods over the waters, which glisten with a lustre elsewhere not known, peaceful as the lake, but varied as the ocean. Art, too, has tasked herself to the full to crowd in this spot her choicest treasures. On the bosom of the waters she has placed the floating castles of our land ; the proud bold shores she has clothed with neat cottages, smiling fields of plenty, and we have seen how she has reared a structure, which lifts its head amidst all this loveliness, to which it lends an additional grace. Description fails in giving an adequate view of this spot : it must be seen to be appreciated, and even then it may truly be said :—
“ Quoties videbis, toties, magis placebit.”

We have stated that this is at the entrance to the government domain and Botanical Gardens. Of this extensive and beautiful promenade, suffice it to say, that it commands an uninterrupted view of the harbour : that, although it possesses as much romantic beauty and placid calmness as can be found in the remote country, yet not one of its different entrances is distant more than a few minutes walk from the very heart of the town, and

it thus affords freely to be enjoyed by all, and without inconvenience or sacrifice, a complete “*rus in urbe*,” a secluded retirement for the man of contemplation, a gorgeous and profusely abundant feast for the true lover of nature, as well as a field of research for the man of science; a relief and refreshment to the busy and industrious citizen: it recruits wasted energies, renews exhausted powers, and adds an attraction to our fair city, which few towns that we know, even in the Mother Country, can boast of possessing. The gardens in the centre of this domain are arranged with much taste and neatness. They are under the care of a superintendent and overseer, who receive salaries from the Colonial Government. They are open to the public from sunrise to sunset, with (of course) the one restriction:—“*Noli me tangere*.” Here flourish our finest colonial shrubs and plants, as well as those introduced from other countries. Fruit and vegetables grow to great perfection. The throwing these gardens open to the public serves many useful purposes: not only does it afford a pleasant promenade, but it induces a love for botanical science; it inspires an attachment to Nature’s works; it leads (we have known instances) the youthful mind to seek a more intimate acquaintance with those beauties which here cannot but be admired.

Another view presents an entrance to this pleasant walk from a different part of the town, the

entrance being from the small lodge seen in the distance to the left. The houses which are seen on the hill, are situate at Woolloomooloo. This strange name (peculiarly characteristic of the Aboriginal dialect) has been given to what may be termed the "West End" of Sydney, though, strictly speaking, it lies on the eastern side. It is situate about two miles from the town. Some of the houses have a beauty which would not disgrace older cities. They are fronted and surrounded by grounds, adorned with the luxuriant produce of the land. In this neighbourhood reside the Colonial Secretary, Sir Maurice O'Connell, the Bishop of Australia, the Speaker of the Legislative Council, and many of our colonial aristocracy. The view itself is taken from a small lodge situate close to the Sydney College, which stands off from what is generally called the Race Course, or Hyde Park. This is a healthy open common, fenced off in four different departments. It contributes materially, we believe, to the health of the City of Sydney, that it enjoys within a few minutes' walk of its busy streets, the privilege of open and healthy public grounds, exposed to the bracing sea breezes, and all the advantage of an Australian air. This common, or park, as it is termed, is almost entirely surrounded with houses, the situation being of late much chosen for its healthy character. Of these houses, the principal and most elegant, we may, indeed, say the most elegant in Sydney, are those

which are known by the name of Lyons' Terrace. They are so called from Mr. S. Lyons, the enterprising owner of the property. They are six in number, and are in their internal arrangements similar to some of the handsome dwellings in our squares and parks at the west end of London. The first occupied by the Honourable, the Colonial Treasurer, C. D. Riddell, Esq.; the second by J. Thacker, Esq., a wealthy merchant; the third at present unoccupied; the fourth by W. H. Hart, Esq., Superintendent of the Bank of Australia; the fifth by his Honour, Chief Justice Stephen; the sixth, and smallest, by A. W. Young, Esq., Sheriff of New South Wales. They are really first-rate dwellings, and the proprietor may well be proud of having at considerable cost reared such splendid edifices. They are let at from about £280, to about £400 per annum. They command extensive views from the front and back, and the stabling, &c., and out-houses are every thing that can be desired.

We must now turn to a very different building at the opposite extremity of Hyde Park, which is known by the name of Hyde Park Barracks, and is used as a prison for the convict population. This building is well adapted for its purpose, containing accommodation for a great number of men. The different barracks are kept scrupulously clean, and the utmost order prevails throughout the establishment. It may just be mentioned, that the

view from the highest back window is one of the most beautiful and extensive which Sydney can boast. Passing the trees to the left, we enter a gate which leads us to the hospital, a neat and commodious building, in one wing of which is situate the Sydney Dispensary, instituted for the promotion of those objects which its name imparts. These buildings are situate in healthy parts of the town, being close to the government domain, and in a part where they may catch all the advantages of the sea breeze. The hospital is under the control of resident and non-resident officers, and opens its doors to all those who need its generous assistance. The Sydney Dispensary is, for the most part, supported by voluntary contributions. It was established in 1826, and numbers among its supporters, members of all religious denominations, and is under the patronage of his Excellency, the Governor. Passing along Macquarie Street, we come to the Council Chamber.

The former Council was accustomed to meet in the building which stands on the right, and round a table, with the Governor at the head, where the affairs of our colony were discussed and settled. When, however, a Representative Assembly was granted to us, it was necessary to enlarge the place of meeting. The New Council Chamber was, therefore, erected under the direction of the Colonial Architect, and provides accommodation for the thirty-six Members, a Strangers' and

Reporters' Gallery, with retiring, Speaker's and Committee Rooms. The Council met in it on the 1st of August, 1843.

Immediately opposite is a large handsome house, on which we must make a few remarks. It was the property of the late Mr. Burdekin, one of the Aldermen of our city. It is built of beautiful sandstone, and contains every accommodation for a gentleman's mansion: it commands an extensive and delightful view of the harbour, &c. It is only to be regretted that instead of being situate in the midst of a street, it is not in a more open part, and surrounded by grounds and shrubberies. As it is, it is an ornament and a pride to our town. The cost of erection was considerable.

The building, before which bend the weeping willows, is the Friends' Meeting House. In the distance is seen a gate with a long straight tree on the right side. This is one entrance to the Government House. The tree is a specimen of the Norfolk Island Pine, which grows to great perfection, and to a considerable height. It has been known to reach two hundred feet in a perfectly straight line.

A little to the right, beyond the limits of this view, is at present in course of erection, a handsome edifice of the Corinthian order for the Australian Subscription Library. When completed, the Library will be one of the largest and most handsome rooms in the colony: viz: 76 feet by 40

feet, and 28 feet in height, with a light gallery supported by Corinthian columns. In the Library of this Institution are at present nearly thirteen thousand volumes, with a large supply of periodicals, and English and Foreign newspapers are regularly received. This is one of the most

Australlian Library.

flourishing Literary Institutions in the colony, having received munificent grants from government, and enjoying a large number of members. These members are admitted by ballot, and are either proprietors, who pay an entrance fee of £5, with a yearly subscription of £2, or subscribers who pay £3 annually. For temporary accommodation, till the new building is

completed, the Institution occupies rooms in Macquarie Place.

Having now referred to all the buildings worthy of note within the limits of the city, we shall, before closing, take a slight glance at some which are a little removed from the town. Of these the first in order which we shall mention is the New Court House. It is surmounted with the royal arms, and immediately over the principal entrance is this inscription: "*Hanc ædem Legibus Angliæ administrandis dicatam curâ Gulielimi Lewis, architecti, Strui Jussit Richardus Bourke, Eques, Legatus Colonix præfectus, 1836.*" Although this was designed so early as 1836, it has only lately been completed. The Quarter Sessions are held here, and the Supreme Court held its Criminal Sittings for the first time in January, 1844. It contains a gallery for the accommodation of visitors, but is deficient in the number and size of its subordinate offices, such as Judges' rooms, Jury-rooms, &c. The wall at the back is part of that which encloses the gaol. This is a strong and extensive building; and the arduous and fearfully responsible duties are faithfully performed by Mr. Keck, the present Governor.

Proceeding out of the town by the high-road to the interior of the country, we pass by the Debtors' Prison. A late Act of the Legislative Council has abolished imprisonment for debt, so

that we have to look upon this building as the remnant of a past age; standing, as it does, in its solitary and untenanted gloom, it appears now to frown on the barbarism which could perpetuate this custom so long, and extend it so far; while some beautiful roses and plants blooming in the front, speak eloquently of the blooming of brighter days. We will not stay to describe its internal accommodations, as they will be no longer required. It was originally intended and used, as a Penitentiary for juvenile convicts, where they were taught useful trades; it was then employed as a dwelling for government carters, at a time when government was more busily engaged, than at present, in public works. From this latter circumstance it even now goes by the name of “ Carters’ Barracks.”

Adjoining this, is another building which has no very pleasant associations: viz: the “ Treadmill,” which is in pretty constant employment.

A few yards further on is the “ Benevolent Asylum.” Over the principal entrance is an inscription, stating the object and the date of the erection of this building: “ This Asylum for the Poor, Blind, Aged, and Infirm, was erected in 1820, L. Macquarie, Esq. being Governor.” At the present time (February, 1845) there are upwards of four hundred inmates, the greater part of whom are men. A great number of these are suffering from imperfect sight (rather a com-

mon disease among us, the only one which prevails to any extent); others are halt or maimed; some are aged and incapable of work, while some few are in a state of mental imbecility. For serious cases of the latter kind there is, however, an Asylum, situate about seven miles from Sydney, at Tarban Creek, and to which has naturally enough been given the name of "Bedlam." The Benevolent Asylum enjoys the support of all classes of the community. Annual collections in behalf of its funds are made in all the places of worship, and other extraordinary means are resorted to enlarge its efficiency, and yet its resources are barely sufficient to meet the pressing calls continually made upon it.

The building is admirably suited for the purpose: removed from the town, and pleasantly situate in an open and healthy neighbourhood. The internal arrangements are beautifully neat: it is divided into nine wards, and it will soon receive enlargement. We are accustomed to look upon this as one of the most noble institutions in our colony; its object being according to the terms of its constitution, "to relieve the poor, the distressed, and the aged, and thereby to discountenance, as much as possible, mendicity and vagrancy, and to encourage industrious habits among the indigent, as well as to afford them religious instruction and consolation in their distress." For this latter purpose, Clergymen of different denominations are in constant attend-

ance. We say, we regard this as one of our noblest institutions. Nothing is more noble than benevolence, no enjoyment is greater than the luxury of doing good, no elevation can a town, or a community receive greater than by the exercise of Christian charity upon Christian principles. Much as we have admired some of our public buildings, and the beauty of many of our landscapes, we would rather consent to see sterility taking the place of fertility, beauty exchanged for ruggedness, our edifices dismantled of their every grace, and reduced to a rude heap or a ruined mass, than we would have it said, that we were deficient in benevolence to the distressed, pity for the suffering, compassion for those who come to us, claiming no relationship, indeed, but a common Father, presenting no claim but a common humanity, having no recommendation but the cry of distress ! Far, far distant be the day when these shall not be considered grounds enough to ensure all our sympathy, and to call for all means of relief at our command.

We can only just notice a large substantial building used by the Australasian Sugar Refining Company, a Company in extensive operation. Their works are situate at Canterbury, about six miles from Sydney, beyond the pleasant suburbs of New Town. Our Sydney citizens have of late years adopted, to a considerable extent, the plan so common of living out of the town, and have, therefore, in many parts, raised little villas of much beauty, where,

amid the retirement and domestic peace of their families, they may find a pleasing relief from the distracting turmoil of business. One of these is situate at Point Piper, the residence of Colonel Gibbes, Collector of Customs. This commands a fine view of the harbour, and with it the extremity of the land forms one of the numerous bays which are constantly to be seen as we sail over its glassy waters.

Such, then, are Sydney and its environs, a city of fifty-six years' growth, and which, in its infancy has taken the stride of a giant in the march of civilization. On the 26th of January, 1842, the fifty-third anniversary of the foundation of the colony, gas was introduced into Sydney, the first town in the Southern Hemisphere in which it has been employed. It is now used in the streets and most of the public buildings. Steam has long been in communication with the interior, and we are thus keeping pace with the age in all the improvements of modern times.

What would those say who first visited our shores, could they behold a flourishing town, the metropolis of a British colony, where they saw nothing but wild savages, and heard nothing but the howlings of the denizens of the wild forest ! landing with dread, stealing a few hurried moments What would those who visited Botany Bay, to examine the few natural beauties which the beach presents, collecting the choice plants which

the coast supplies, (from the beauty and rare character of which the bay received its title of "Botany"), what would these say, could they now, standing on the same spot, look at the monument of poor La Perouse, and gazing on

Monument of La Perouse at Botany Bay.

the waters before them, see the emblems of civilization scattered around them, and know too, that but a short distance would take them to the busy haunts of men, happy in all the arts

of civilization, and advancing in all that adorns humanity.

Yes, La Perouse has his monument here. "It is situate on a green plot, elevated above the adjoining land on its north. It is a plain circular column, about twenty feet in height, constructed on a square pedestal, and surmounted by a brazen sphere, emblematical of the vocation of the man it is intended to commemorate. On the side of the pedestal are inscriptions, recording the birth, principal known adventures, and supposed death of the French navigator. The whole is surrounded by a neat low quadrangular parapet, which considerably enhances the beauty of the monument." The place and circumstances of his death are unknown, but here stands a monument, sufficient to tell that he lived; that he lives no more, except, indeed, as all benefactors to their species live, in the enduring character of their works, and in the remembrance of the wise and good. Just by Botany Bay are formed two rivers: one, George's River, navigable about thirty miles, and another, Cook's River, which is navigable for but a short distance. The latter runs between two points of land seen on the right, the further of which goes by the appropriate name of Long Beach. Rest, La Perouse! we know not thy last slumbering place; but we raise thy tomb: thou wouldst desire that even thy monument should look out upon the

expanse of waters, there then we plant thy cenotaph ; around it blooms many a rare exotic, upon it we drop a tear, and above it plays a halo of glory from the pure light of that sky, which traced all thy passage, and now guards (where-soever it be) thy last sad resting place.

“ What would those say, who, on the 26th of January, 1788, on a little stream, formed the first settlement in this colony under Captain Phillip, could they know, as has been well observed by a Colonial writer, that the course of the muddy streamlet may still be traced threading its way across the line of Hunter Street and Bridge Street, and mingling with the waters of the Cove, but the thick wood through which it silently stole in 1788 has disappeared before the advancing march of civilization, and the deserted haunts of the kangaroo and opossum, the rude hut of the Aboriginal savage, and the stillness of the forest solitude have been converted, not by magic, but by the more potent influence of European enterprise, into a large and populous commercial city, the Queen of the Southern Seas, the metropolis of a new world.”

What would the enterprising Captain Cook say, could he visit this our Australian Capital ? What ! might he not say, standing on some eminence whence can be seen all our fair city stretched before the gaze, with almost a nobler pride than our great English architect says from his tomb, “ Si

monumentum quæris, circumspice?" And how has all this been effected? By well directed British influence and energy. She has raised, almost at her antipodes, a town containing now nearly 50,000 inhabitants, and that but the capital of a colony with a population of more than three times that number; a city which vies with many older in the world's history in the beauty, order, and splendour of its buildings; the firmness and intrinsic prosperity of its institutions. Long may Australia flourish as a healthy off-shoot from the parent stem! Resplendently may she still glisten as a sparkling gem in the crown of Britain's Queen! Let Britain be true to herself, and her colonies; let her enlightened zeal,—enlightened by the soundest principles of national policy, of social prosperity, of divine religion, and unerring immortal truth,—let her zeal, thus enlightened, preserve as her own, intact and undefiled, that which her enterprise has called into existence, which her energy has created, and her fame shall be extensive as her dominion—enduring as her destiny.

We have desired in these pages to show that, apart from other attractions, our colony may possess, we boast a town of peculiar salubrity, and one too where through the live-long year, in every variety of season, Nature is clothed in her gayest attire, and where Art too has done her utmost to soften the roughness, or enhance the beauty, of Nature's fairest works.

CHAPTER VIII.

CONCLUSION.

BEFORE we entirely release our reader's attention, it will be necessary to introduce some general remarks, serving at once to supply deficiencies in previous statements, to introduce some few points of importance for which no more convenient place could be found, and to present in a condensed form a general view of our actual state. It will be our business, also, to correct some false impressions which have obtained respecting New South Wales ; impressions which are equally false and equally dangerous, whether they be derived from the exaggerated praise of our over-zealous friends, or the indiscriminate censures of our prejudiced calumniators. New South Wales is neither Elysium nor Pandemonium, though really some would make us think it possessed the charms of the one, and others that it was rank with the horrors of the other. We shall strive to give an

impartial view of *New South Wales as it is*, being well convinced that this colony will permanently prosper in exact proportion to the extent to which her resources become developed, and her encouragements to patient industry are fairly presented. In order to make Australia what her best friends can wish her to be, all that is wanted is, "fair play and no favour."

Intending emigrants to our shores, or those interested in the welfare of such as may voyage hither, will be mainly anxious to understand the character of that society into which they will be thrown, what is in fact, the moral tone of our community, how we stand in regard to the main elements of domestic order and social virtues. They will be also desirous of knowing what reward may await their persevering endeavours after a competence or an abundance of this world's "good things,"—whether they may safely employ their already hard-earned store with any hope of its increase and enlargement. To questions such as these it is the object of this chapter to supply the answer.

With reference to the state of society among us, some allowance must, of course, be made for the elements out of which it has been formed, the materials which have entered into its composition. The convict origin of the colony has of necessity produced some influence, though that influence will, of course, be less felt in every successive year.

Making this allowance, we are surprised that the moral condition of New South Wales is so good as it is. It is not true (as our calumniators assert) that crime unblushingly walks our streets, pervades our halls of commerce, intrudes into our domestic circles, and confounds the principles of morality and virtue. Honour and moral rectitude are not unknown to our merchants, domestic peace and love are found around some of our hearths, the rights of man we do not rudely despoil, the laws of God we do not impiously affront.* One veracious chronicler has said of us—"Vice here usurps the place of virtue, and falsehood is universally practised; all morality is laid aside, the precepts of the wise are set at nought, and vice in its thousand forms reigns predominant." Now this is gross unwarranted calumny,—there is no ground for the accusation,—and one of two inferences must be made from this representation, either that its author has set himself intentionally to misrepresent us, or that having received his information from calumniators (such as are found in every community) he now chooses to

“ Condemn a people for one single fall,
And casts the filthy garment on us all.”

* The second Sydney Gaol delivery for the year 1844 numbers only twelve cases. This, in a population of between forty and fifty thousand souls, speaks strongly for our freedom at least from grosser vices.

No Upas tree grows on Australia's shore to poison the plants of moral excellence that bud forth in our midst; no blighting mildews destroy the lovely flowers of virtue whose fragrance perfumes our land. Here, as elsewhere, "honesty is the best policy," though, at Britain's antipodes, we are not removed from all that adorns and elevates that sea-girt isle; the British born have not forgotten the lessons instilled into them by early training, and now enforced by those ten thousand soul-subduing associations which melt into moral susceptibility, or rouse to high moral daring. "*Cælum, non animum mutant, qui trans mare currunt.*"

Of the native-born population of Australia, we will not speak in disparaging terms. Descended, as many of them have been, from parents whose names were stained by crimes against their country and their God, brought up under a fearfully imperfect mental training, a neglected moral cultivation, and either an entire omission, or, at the best, but an imperfect performance of the duties and ordinances of religion, they have yet risen superior to these disadvantages, have earned for themselves a good name, have reared families in honour and respectability, and are now themselves in the enjoyment of general esteem and confidence, and their children, availing themselves of blessings placed within their reach, which their fathers knew not, are bearing upon them the buds of excellence.

Convicts, whose sentences have expired, or who have received pardons, and who are more generally called "emancipists," form no uninteresting part of our population. These, feeling that they had a bad character to lose, and a good one to gain, have, in many instances, so set themselves about the work of reformation, that now some are reckoned among our most honourable tradesmen and merchants, among the most liberal supporters too of the various benevolent institutions which adorn our land. Some of these institutions have been all but entirely founded, and are now mainly supported by their means. In many cases they have, by their industry and perseverance, acquired considerable wealth, and, in most instances, the wealth, thus obtained, has been generously and honourably devoted to the public benefit, the real substantial advancement of this land of their expatriation. Nor do we know a more pleasing trait in human character than that which is thus displayed. Once degraded, they have paid to a violated law the satisfaction it imperatively demanded; but when the debt was paid, another obligation was felt to remain behind. Society had lost that beneficial influence which each member is called upon to exercise, and to atone for this was now their honourable desire. In the fair and honest pursuit of commerce, by untiring industry, they acquired those means which enabled them to gratify their wish. A competence, more, a profusion, rewarded

their patient toil, and no sooner was this poured into their lap than they gave it back, spreading it through numerous channels, through each of which, as it flowed, it left blessings that even succeeding ages may enjoy. To say nothing of many public buildings which are the chief architectural embellishments of our city, and which have been the result of their enterprise and zeal, we turn to some of those institutions of charity and benevolence which own them as their earliest supporters. Thus much have we deemed it right to say of a class much maligned; of a class whose early character can never, indeed, be entirely forgotten, but whose present position and status in colonial society should shield them from the rude attacks of the censorious and severe, and, indeed, entitle them to the thanks and respect of every well-wisher to this colony.

We cannot, however, honestly blind our eyes to some evils which exist in our midst. One, perhaps, inseparable from a young commercial community must be mentioned and deplored. We are too much inclined to over-estimate wealth. The operation of this is found in the unblushing pursuit by some of questionable courses for its acquisition, in the license which is too often given to those who possess the *summum bonum*, to live as they list, and even to be guilty of acts, in which those less favoured could not with impunity engage. Instances have occurred in which wealth, or the

appearance of wealth has shielded from deserved punishment. We must rid ourselves of this false opinion. Money is not always the test of respectability ; vice is vice, though its exterior be gilded ; all disguises in which a dishonourable man may enwrap himself, must be torn off, and he must appear in all his native deformity before himself and others, if we would infuse a healthy moral tone into our community. Our recent pecuniary embarrassments have partially cured us of the evil, as they have taught us that "riches make to themselves wings and fly away," and that we must seek for a more enduring prosperity for the State, and a more solid character for the man than the mere possession of wealth can ensure. "The race is not always to the swift, nor the battle to the strong; neither riches to the man of understanding."

Intemperance, that insidious and destructive vice, does not prevail to the extent which might be expected. The natives of Australia are, as a class, a temperate race—it is, we regret to say it, the imported part of the population, free no less than bond—who mostly indulge in this degrading habit. It is of course, then, obviously unfair to class this among Australian vices.

One of the worst features of Colonial society is a propensity to gambling, which appears to affect almost all classes of the community. Billiard-tables are to be seen at almost every corner of our streets, and horse-racing with its attending evils is

the favourite sport. Even the youth are not free from this evil influence; their boyish sports are to them rendered more interesting (?) by staking upon their issue some small sum, paltry, perhaps, in itself, but more than sufficient to show the early tendency to so dangerous a habit. So strongly was this disposition rooted in the minds of many of our colonists, that our commercial transactions took much of the character of gambling on a large scale, and it has been the reaction, in all probability, from this state of things which has caused the late and present depression to succeed our past prosperity. This evil is now considerably mitigated in its character,—it presents none of its worst features as it formerly did, but still in a view impartial, as we pledged ourselves it should be, of our actual condition, we could not fail to mention this as one of our bad traits, and to deplore it as such.

Shall we advert to another evil?—We touch upon it with delicacy and reluctance, but the truth must be told, that illicit intercourse between the sexes has prevailed, and we fear to a great extent does prevail throughout the land. One subject for congratulation however exists, that the voice of public morality has been partially heard, and the crimes we reprobate are not now perpetrated, as once they were, with unblushing effrontery in the face of day. Still we would wish for a healthier tone of moral feeling in this matter,—it is still a plague-spot on our community, it rests as a stain

which many an ablution will not wash out. We may partially account for the existence of this evil by the disproportion of the sexes, which has elsewhere been spoken of, and other causes may be assigned by the political economist, but the Christian moralist while he sighs at the existence of so degrading a vice, and feels that "it is a shame even to speak of those things which are done of them in secret," will offer up his prayer to the God of purity that he would "turn a pure language to the people."

We have not blinked the evils which reign among us: we need the purifying influences of Religion to make us what, as a nation, we should be; but having honestly and fearlessly discharged our duty, we affirm, that when we consider from what we have sprung,—that we are subject to all the evils which are known to be incident to a seaport and a military depôt, that many in the interior of the country are completely shut out from all means of mental culture and religious instruction,—when we consider all these circumstances, the wonder is, not that vice exists, but that aught else has any place. It is well it is not rampant and victorious. And further we must state, *there is nothing in the character of Colonial society calculated to foster and encourage vice.* We know it has been said that it is a losing game for a man to be moral and honest in New South Wales,—that prosperity will attend him in exact

proportion to his playing the villain. All this is slander, which deserves to be retorted on its authors. We affirm it without fear of contradiction, that here the man of moral rectitude and conscientious integrity is sure to prosper, that in addition to the testimony of his own conscience, he will enjoy the approbation and respect of all, and prove beyond question the truth of the old proverb, "Virtue is its own reward." If an immoral or dishonourable man does by chance succeed, it is in spite of himself and public opinion ;—when the contrary character prospers, it is the legitimate result (under God's blessing) of his own character and exertions, and the voice of society will be ready to acknowledge how deservedly the prize has been won. In fact, a fear of undue encouragement being given to the immoral or even doubtful character, has induced a spirit of exclusiveness among the higher classes, which still prevails when the necessity for it has almost entirely disappeared.

Hence the society of the Colonial élite is limited, perhaps unduly so, but we are not quite sure whether there is not more friendship and social enjoyment among this than any other class. The middling classes have none of those delightful interchanges of sentiment and feeling which are so common in the mother country. We know nothing of those little réunions which tend to knit families to each other, and by bringing them into connection, make them better known and more

beloved. We here live too much at a distance from each other, we seldom meet except in the pursuit of business, we know nothing of each other except how much we are respectively "worth," we seem either to distrust all, or to feel ourselves to be by all distrusted. These social meetings, whose want, those of us accustomed to English society feel and sadly deplore, would do much to soften down the asperities induced by collision with the world, would draw forth the hidden excellencies of character, of which, all have their share, and which are now buried, because there is no scope for their full development.

We have lately observed with sorrow the prevalence of a disposition among the labouring classes to indulge in factious opposition to constituted authorities, and to become infected with all the evils flowing from radicalism and "mobocracy." Far be it from us to check free discussion. The right to engage in this is the glory of a free government, but liberty may become licentiousness; freedom must be itself restrained, or it becomes the most galling slavery. Unless skilfully conducted and wisely tempered, we confess we look with suspicion on "crowded meetings of the working classes;" and tremble when we hear of the "thundering applause" with which some overzealous orator has been greeted. We fear that for many of the evils which we notice and condemn among the working classes, the blame is to be laid

at the door of those who either at home, or in the colony have given out false views of what we really are and actually require. Some time since New South Wales was represented as a spot teeming with wealth, where fortunes were to be accumulated in a very short time, and nothing was wanted but a brief residence and the most moderate exertions to ensure the speedy acquisition of wealth. These golden dreams have been dispelled, and no wonder that dissatisfaction has succeeded. The fact is, that here as elsewhere, a man must submit to years of patient, unwearied toil, united with strict economy and habits of temperance and order, before he can hope to realize an independence; while, on the other hand, if he pursue this course, the independence he seeks is almost certain ultimately to reward him. Emigrants have come out from the United Kingdom with most ridiculously extravagant notions; they have asked wages which masters could not honestly pay, and which, indeed, it would not be well for them to receive.

The rate of wages in Sydney, and the country is still too high, and we hesitate not to say that it would be ultimately better for master and servant if they were considerably reduced. A few days since, we heard a man who is engaged in the menial service of a house in the country complain most bitterly, that he did not receive more than 8s. a week! and we know that this same man lives on the establishment as well as any man could

require. Again, the working classes on their arrival in Sydney are too fond of remaining in the town. Our advice to all intending emigrants is—go at once into the country at any remuneration that may be offered you. The capital is overstocked with labour, by remaining there you will acquire expensive and lazy habits, you will be led into numerous temptations to extravagance, and you will know comparatively nothing of the country you have left your native land to visit. The suggestion has been made to open ports on the different parts of the coast, at which ships might disembark passengers, without coming to Sydney at all, and if practicable, the plan would, to immigrants at least, be attended with no slight advantages. Till this or some similar plan be adopted, again we say, get out of the town as soon as you can. Small wages, we had almost said no wages at all, in the country, are better than high wages in the town. Better, because in the former case there is no temptation to extravagance, such as the town presents, better, because by an acquaintance with the interior you acquire what is itself a fortune in New South Wales—colonial experience. The class of persons whom we most want, and whom for some years we shall want in very large numbers, are shepherds, farm-labourers and agriculturists. Of mechanics we have enough and to spare. We can offer no encouragement to clerks, or to any who expect to earn their living

by sitting at a desk ; we have more than enough to satisfy all the demands that may be made for such persons for some time to come. It would be cruel to raise expectations which cannot be realized, therefore we have not hesitated to state what men we do and do not require.

We can confidently recommend (particularly at the present moment) New South Wales as a most desirable sphere for the capitalist and man of fortune. The most inveterate croakers amongst us, are now well convinced that our colony must very soon emerge from the difficulties which are now pressing upon us, and when that is the case, a healthier state of things in relation to our monetary interests will doubtless be induced. At this moment property of all kinds is sadly depreciated. Good cattle are to be had at from £2 to £2. 10s. ; sheep at 5s. or 6s., and land is sold for a mere trifle. To any person with a small capital to embark, possessed of ordinary prudence and business habits, we have no hesitation in stating that this colony presents attractions seldom to be found. We believe that such a person would now require but a comparatively short time to double his capital. The arrival of some few such persons, possessing not only the desire to enrich themselves, but to benefit the land, would be no small advantage to us at the present juncture. Their arrival among us, and their careful and well-directed employment of their resources, would tend mate-

rially to hasten the period we have anticipated. To one such individual we are already indebted for a seasonable employment of labour, and we trust we shall not have to wait long before others appear among us to do the State some service. We assure them they will receive a safe and abundant reward for such public spirited efforts.

We have stated our belief that this colony will recover from the depression which has of late weighed upon us, and we ground our belief on the fact, that the colonists are beginning to open their eyes to their real condition, to develop the resources of the land, and to recover from those evil habits into which they had sunk. 'Tis true, the storms of adversity are now howling around the land. Fear and trembling have seized upon her merchants and bankers, her tradesmen and mechanics, her agriculturists and graziers. Many are ready to give up all for lost. A panic has seized upon her people, and under its maddening influence, everybody is anxious to sell, and nobody willing to buy. The inevitable consequence is, that property of all kinds has become already depreciated. Three years ago, the colonists were drunk with exaggerated joy; they are now just as drunk with exaggerated despondency. And as the elation of their spirits then caused property to mount far, far beyond its intrinsic value, so their present dejection has caused it to fall as deeply below what it is fairly and honestly

worth. But meanwhile, the bones and sinews of colonial wealth remain precisely as they were. Our vast extent of territory has not been contracted; our soil has not been impoverished; our hills and dales are still clothed with living and spontaneous verdure; our skies are not less bright; our climate not less genial; our flocks and herds are still thriving and multiplying; our fleece still retains the peculiar virtues for which it has been so highly valued in Europe; the productions of our industry are still borne from our ports to distant regions of the earth; our population still comprises a hundred and fifty thousand free and enterprising Britons, whose increase from births alone, is centesimally equal to that of England, and our shores are still washed by an ocean, whose fisheries present inexhaustible mines of wealth. Besides all these grand features in our favour, we are recovering from the fearful extravagance which pervaded all classes of the community. We have heard of bullock-drivers in the "olden times" of the colony, ordering at an inn on the road side, a dozen of champagne at 8s. or 9s. a bottle, and then having poured the "sparkling" beverage into a bucket, have luxuriated in their dear bought enjoyment. This is of course an extreme case; but the disposition to spend money foolishly and extravagantly seems to have been almost a disease with which all classes were infected. There is still too much of this, as shown by a love of display in

the articles of equipages, dress, &c., as well as in the large number of our hotels, and places of public entertainment to be found in our streets. The multiplication of these is of course conducive to many bad ends, but we mention them now merely to condemn the extravagant and foolish waste of money of which they are the proofs, and to the further indulgence in which they present the temptation. We must learn habits of strict economy before we can hope to prosper, and it is because we are leaving our former habits, that we think we are beginning to prosper. In connection with these habits of frugality, we are also learning to elicit the teeming resources of our hitherto almost unknown land. It has been discovered at last that we can produce almost every thing we ourselves require, and that we can also increase our exports to an extent that we had never imagined. In fact, we are beginning to export more and import less, to consume less and produce more.

Our new export of tallow promises to be as profitable as that of our staple commodity, wool. Our shipments have already produced high prices, and as we improve in the preparation of the article, and the mode of packing, &c., for exportation, we shall doubtless find it not only continue, but increase in value. The benefit of this export is found in at once fixing a minimum price on the

stock of our settlers.* We shall no longer be obliged to trust to chance to decide the value of our flocks and herds ; their least worth can now be computed, and hence the gambling, hap-hazard, system of dealing which has before prevailed and wrought such mischievous consequences, will make way for a sound and healthy straightforwardness in all our money transactions.

Attention has also been paid to the manufacture of gelatine, and to the export of salted provisions ; the latter of which has not yet, however, succeeded. We have also discovered, that for luxuries we need not travel farther than our own land. From our own beautiful grapes, good wines are manufactured ; from peaches (which are just now so abundant, that they are retailed at a farthing a dozen !), a good brandy has been procured ; and the tobacco which is grown, and is coming into very general use, promises to be equal to the American negro-head. Our Colonial tweeds are extensively used ; and a pottery has lately been established at the Hunter's River. The wines we can make have the strong recommendation of being just adapted

* Before the boiling-down system came into operation, we heard a rich man in Sydney state, in a most lugubrious tone, that he had been obliged to take in payment for a debt, ten thousand sheep, at Moreton Bay, at one shilling each. So little did he think of his bargain, that he put them in flocks of from ten to fifteen hundreds, and removed the ewes, to prevent the increase, and consequent addition to his expenses of management.

to our climate. The force of habit has contributed to vitiate our taste, and we are inclined to admire the alcoholic port and sherry brought to us from England, (and sad stuff is generally imported under these names), rather than the generous and harmless lighter wines which our own vineyards can produce.

We can produce samples bearing a strong resemblance to good Sauterne, Barsac, Hock, Claret, &c.; and it merely requires a little more practical acquaintance with the arts of vinous fermentation, and abundance of cheap labour, to enable us to produce all, at least, that we ourselves require. Tropical fruits can be grown at Moreton Bay. The olive is peculiarly fitted to our soil, and so also is the mulberry, which would enable us to manufacture silk even in large quantities. This has, we know, been tried on a small scale, and been attended with complete success. Tea, likewise, would grow well, we have been led to understand, to the northward.

The opinion has been entertained, that this is fitted to be a pastoral country alone, and that we cannot hope to gain much advantage from our agriculture. We are learning to ridicule this idea as altogether unfounded.

Those valuable institutions, "Agricultural Associations," for the purpose of receiving and communicating information on all matters connected with the cultivation of the soil, are begin-

ning to be formed among us. Such societies must be productive of good; they induce men to think on the matter who never troubled themselves to think before; they illustrate the principle that "union is strength," and by collating and condensing the information which each one possesses, render an essential service to the general prosperity.

They tend to give the practical man, be he even the commonest labourer, his proper standing; they teach him to regard himself, and others to regard him, as of some use, nay, of invaluable use, as only from the induction of facts such as these practical men can supply, we derive the important principles which are to guide us in all our movements. We see then, in the establishment of these associations a "token for good," as we are convinced nothing will tend more completely to lay open our country, than the means which will be hence adopted. Already has our Floral and Horticultural Society, by the stimulus of periodical exhibitions and prizes, disclosed what we had scarcely known to exist among us, and it needs only a simultaneous and systematic effort on the part of all interested, to raise us to our proper standing as an extensively agricultural as well as pastoral country. This, however, will never be the case, until the plan of small farms is more generally adopted.

We have no faith in the wisdom of that plan which apports acres by tens of thousands to

some few aristocratic lordlings, and leaves those who could, and would cultivate a smaller plot, unprovided with any means of turning their powers to account, except in the employment of those who monopolize the whole to themselves. This looks too much like feudal times and habits ; and till the time of granting or letting small farms is adopted, we despair of much more extensive cultivation of our soil. It is pitiable to see the miles of country which now lie uncultivated ; the land may be part of some thousands of acres which are possessed by the Squire of the district, who acts as the dog in the manger—unable to use it himself, and keeping off all who would. We want to follow the advice of the careful Scot : “ Be aye planting a tree, Jock, it will grow while you are sleeping.”

The system we recommend would tend to introduce among us the smiling villages and happy hamlets of “ Old England ;” we should know something of the protection afforded by a stout yeomanry, and the blessings of a happy peasantry—a peasantry no longer degraded by habits which submission, when extended too far and continued too long, is almost certain to produce ;—a peasantry thriving in all the acts of honest industry, raising their heads as independent lords each of his little farm ;—a peasantry acting out the Divine injunction : “ Be fruitful and multiply, and replenish the earth, and subdue it.” The

granting of small allotments of Crown lands as part remission of the money expended by voluntary emigrants;—the permission to each emancipated convict of good conduct to select some spot of small extent for the purposes of cultivation, these and other plans have been suggested; but whatever system we adopt, at least, let us begin to rid ourselves as soon as possible of those “land sharks,” who monopolize what should be more equally divided, and who therefore leave barren that which waits only for labour to “make it rejoice and blossom as the rose.”

It is then no vain hope, no unreasonable expectation, to anticipate for Australia a long career of real, substantial prosperity. From the clouds which have obscured her, and which even now darken her fortunes, she shall yet emerge, and all the brighter too for the temporary eclipse. Experience will teach us many useful lessons, and we shall then learn how “Sweet are the uses of Adversity.”

On every ground, then, we recommend New South Wales as a home to the intending emigrant. With a healthy climate, teeming resources developing themselves every day, encouragements on every hand to patient toil, and incentives to exertion elsewhere scarcely known, and here abounding, this colony presents inducements of no ordinary character to all who, determined to leave their native land, are yet uncertain where to direct their steps. We would urge upon such the selection of

a *good* ship, with not too large a number of passengers. And here let us urge upon emigrants the importance of complying strictly with all rules laid down for the guidance of their conduct during the voyage. Especially let them be scrupulously clean. Cleanliness on board ship is indispensable, and no pains to maintain it are too great. Let emigrants be careful of their conduct during the outward voyage; it will *tell* materially upon their prospects in obtaining speedy and respectable employment. Many have learned on board ship to *drink*, who were temperate before, many to *swear*, who before feared an oath. Avoid these evils, and all others. You are going to a new country to form new connections; your fellow-passengers will judge of your general character by your present conduct; let them see nothing which, if repeated on shore, would cost you even a moment's blush. You will be wise to provide yourself with some little comforts in addition to those the ship may supply.

We give the present prices (February 1, 1845) of the principal necessities and luxuries of life in Sydney. The extract is made from the "Sydney Morning Herald," and may be depended upon as correct:—

COMMERCIAL INTELLIGENCE.

There has been no improvement in demand in any of the markets throughout the week. Business

in almost every department has been remarkably flat; the transactions have been limited to very small parcels of goods that afford no scope for comment, but in prices there is not the least alteration.

JOHN JOHNSON, Broker.

Albion House, Miller's Point.

THE WOOL MARKET.

The prices at which good fleece wool have been sold during the week varied from 1s. 2d. to 1s. 3½d. per lb., but what reached the last figure was very superior. Some inferior and grassy parcels have been sold at from 1s. to 1s. 1½d.; and the market is very bare of hand-washed or skin. The exchanges are better than they were, but not sufficient to make an alteration in the price, the banks purchasing bills against produce readily at 6 per cent. discount.

Freights are at 1¼d. per pound to London, and 1¾d. to Liverpool. Shipments to the former place have been made at ⅙d. per pound less, but are now firm again.

REFINED SUGAR. — Australasian Sugar Company's prices :—Fine loaves, on the spot, 4½d. per lb.; ditto, for exportation, 4¼d. per lb., free on board; crushed lump, 40s. per cwt.; fine pieces, 30s. to 36s. per cwt.; molasses, none.

E. KNOX, Manager.

January 31.

SYDNEY MARKETS—FRIDAY.

WHEAT.—The demand during the week has been brisk at the Mills, and for all that brought to the market as high as 3*s.* 6*d.* on an average has been paid. At Barker and Co's Mills, as much as 3*s.* 7*d.* has been given for some samples. Fifty-four loads paid dues at Campbell Street Market—the prices given ranged from 3*s.* 4*d.* to 3*s.* 7*d.*; the average price for the whole was 3*s.* 6*d.* per bushel.

FLOUR.—The usual demand continues at the Mills, and the price may be reported firm at £9 a ton for the best quality, cash.

BRAN.—The price of bran is 9*d.* to 10*d.* per bushel.

BREAD.—The two-pound loaf is 2½*d.*

MAIZE.—The wholesale price of this description of produce is from 2*s.* to 2*s.* 3*d.* per bushel; the retailers are charging from 2*s.* 6*d.* to 2*s.* 9*d.* per bushel.

BARLEY.—Most of the dealers have orders to buy, but in consequence of the low prices given, none has been offered for sale; the retail prices range from 2*s.* to 2*s.* 6*d.* per bushel.

OATS.—There is comparatively a very small supply on sale; the retail prices range from 2*s.* 9*d.* to 3*s.* 4*d.* per bushel.

GRASS.—Nine loads have paid dues: the prices per dozen per load have been from 7*d.* to 9*d.*; the average price is 8¼*d.*

GREEN BEDDING.—Two loads paid dues, one of which was sold for 2s. 9d. and the other for 3s.

HAY.—About sixty loads paid dues, a great portion of which was of very inferior quality. The lowest price given was 1s. 6d. per cwt., the highest 3s. 2d.; the average price for good hay is about 2s. 9d. the cwt.

STRAW.—Sixteen loads were sold at the Campbell Street stand at from 1s. to 1s. 9d. per cwt. The average price is about 1s. 4d. per cwt.

BUTCHERS' MEAT of every kind is plentiful, and the quality of the very best description. The wholesale prices are as follow: Beef, $\frac{1}{2}d.$ to $\frac{3}{4}d.$ per lb.; mutton, $1\frac{1}{4}d.$ to $1\frac{1}{2}d.$; pork, $2\frac{3}{4}d.$ to 3d.; veal, 3d. to $3\frac{1}{4}d.$ The retail prices are: Beef, $1\frac{1}{2}d.$ to 2d.; mutton, 2d. to $2\frac{1}{4}d.$; pork, 4d. to 5d.; veal, $4\frac{1}{4}d.$ to $5\frac{1}{2}d.$ Salt beef, per tierce, is from 45s. to 55s., and from $1\frac{1}{2}d.$ to 2d. per lb. retail; ox tongues, from 1s. 3d. to 1s. 4d.; sheep's tongues, 9d. per dozen; ox tails, 3d. to 4d. each; dressed roasting pigs, from 4s. to 4s. 6d. each; suet, 3d. per lb. wholesale, and 4d. per lb. retail.

WORKING BULLOCKS.—A team of eight bullocks, with harness and dray, were sold at the pound since last report, and realised £20, the buyer valuing the bullocks at £2 per head.

FAT CATTLE.—The carcase butchers are now giving from 35s. to 50s. per head for fat beasts; in one case 55s. were given on the road for a small herd. The average price is about 45s. for a good beast.

SHEEP.—The prices given for sheep for slaughter vary from 5s. to 8s. per head, the general price is 6s. 6d.

MILCH COWS.—Twenty-eight head have been sold at the pound since last report, the prices have ranged from 20s. to 70s. per head, the market price of a good cow and calf is about 56s.

CALVES.—Fifteen head have been disposed of at the pound for slaughter, the prices given ranged from 7s. 6d. to 18s. per head; a fed calf is worth 15s.

HORSES.—The mounted police are giving from £12 to £15 for cavalry horses. Ten stock horses were sold at the Cattle Market on Tuesday last, and realized from £6 to £10 each, the medium is about £7. 10s. Strong carriage horses are worth £10 each. Good mares for breeding fetch from £12 to £15.

PORKERS.—There is a large supply of these at present in the market; the carcase butchers are buying them up at from $2\frac{1}{4}d.$ to $2\frac{1}{2}d.$ per lb. on the estimated weight of the quarters.

FRUIT.—During the week one hundred and seventy-seven loads have paid dues, mostly peaches, nectarines, pears, and apples. The peaches have been sold at from 4d. to 1s. per basket; the nectarines at from 1s. to 2s. per basket; pears, at from 2d. to 8d. per dozen; and apples, from 6d. to 10d. per dozen. The retailers are selling grapes at 3d. per pound, for which they are giving the settlers

from $1\frac{1}{2}d.$ to $2\frac{1}{2}d.$ per pound; bananas are very plentiful at 2s. per dozen; the best oranges are retailing at 1s. 3d. per dozen; lemons are from 8d. to 1s. per dozen.

POULTRY. — Although only three loads paid dues, there is a large supply in the market. The retail prices are:—Fowls, from 2s. to 2s. 6d. per pair; ducks, 3s. 3d. to 3s. 9d. per pair; geese, 6s. 6d. to 7s. 6d.; turkeys, from 7s. to 10s. each; guinea-fowls, 4s. to 4s. 3d. per pair; wild-ducks, 3s. to 3s. 3d. per pair; pigeons, 1s. 6d. to 1s. 9d. per pair. Eggs from 7d. to 9d. per dozen.

VEGETABLES.—Seven loads paid the market dues. The prices are—cabbages and savoy, from 1s. to 3s. per dozen; lettuces, from 1s. 3d. to 3s. 3d. per dozen; French beans, from 1s. to 1s. 6d. per peck; cucumbers, from 9d. to 1s. 6d. per dozen; melons, from 8d. to 1s. 9d. per dozen; vegetable marrow, from 10d. to 2s. per dozen; rhubarb, 3d. to 4d. per bundle; dried and green herbs, at 1d. per bundle.

DAIRY PRODUCE.—The retail prices of butter, cheese, and bacon, remain as last reported; 18 cwt. of good butter from the interior was sold with difficulty in small lots, at from $4\frac{1}{2}d.$ to $6\frac{1}{2}d.$ per lb. Several small lots of bacon have also been sold at from $3\frac{3}{4}d.$ to $4\frac{1}{4}d.$ per lb. Good cheese is selling at $5\frac{1}{2}d.$ per lb.

POTATOES.—There is a large supply at present in the hands of the dealers, which makes it difficult

for the settlers to effect cash sales ; the prices given range from 35s. to 42s. per ton.

COLONIAL TOBACCO.—Walthall's best tobacco is 1s. 6d. per lb. ; other sorts downwards to 8d.

TIMBER.—This market is still very dull, the prices given by the dealers are from 4s. 6d. to 5s. per 100 feet ; shingles, from 5s. 6d. to 7s. per 1000 ; treenails, 27s. 6d. to 32s. per 1000 ; pailings, from 3s. 3d. to 3s. 9d. per 100 ; posts and rails, 15s. per 100 ; laths, 3s. 6d. per 100 ; bark, 4s. per dozen ; wheel spokes, 4s. per 100 ; wheel felloes, 20s. per 100 ; firewood, 3s. per ton. There is but little cedar in the market, the price in log is from 9s. to 9s. 6d. per 100 feet.

SUNDRIES.—Lime, 4d. per bushel ; bricks, from 18s. to 20s. per 1000 ; colonial salt, £5. per ton ; colonial honey, from 3d. to 7d. per lb. ; green hides, 7s. each ; hides in salt, 1½d. per lb. ; colonial pipes, 3s. per gross ; coals, from 16s. to 20s. per ton, delivered in the city.

House rent is still high, £30 being paid for a very small cottage, and even this will not command a good situation. Time will, however, eventually remedy this evil. Shepherds are now getting from £15 to £18 and often more, with liberal rations ; house servants from £16 to £18 and frequently £20, and day labourers £1 a week ; we think, therefore, that we have made out a fair case in recommending this land to the starving surplus population of England.

And have we not said enough to make every Briton proud of his country, which has spread her influence over the habitable globe, on whose extensive empire the sun never sets, which has reared even at her Antipodes a fair model, a bright representation of herself. Britain has looked abroad on the vast abyss of waters, and now does she here behold her image reflected in every form of varying loveliness:—

England! with all thy faults, I love thee still,
My country! and, while yet a nook is left
Where English minds and manners may be found,
Shall be constrained to love thee.”

The origin and rise of this colony is peculiarly interesting. Other lands have been added to Britain's vast dominions by war; the new country has risen on the ashes of those brave men who have fallen on the battle-field, the shouts of joy on the acquiring fresh possessions have strangely mingled with the confused noise of the warrior, “the palms of victory waved by the first dwellers in the land have been stained with the drippings of garments drenched in blood.” England, however, need not blush when she looks at this her second self. The violated majesty of British law demanded that rebels against her authority should be, at least for a season, outcast from the land which had been the theatre of their crimes, but which she forbade to be the asylum for their guilt. Hither she directed their course, and sought to

reform, while she was compelled to punish. British enterprise seemed to regard this land with favour when the first Briton set foot upon the shore. She appeared to revel in the natural beauties spread before her gaze, and beckoned hither many of her devoted sons. They obeyed the call, more followed, they crowd by the hundred, the thousand ; as by the magic touch of the enchanter's wand, she bids to spring up from the desert the abodes of peace and plenty, the halls of commerce, the seats of learning, the temples of God. And now as her spirit glides over the earth, and broods over the waters, to cover the waste plains, or raise up from the buried solitude of ocean undiscovered regions, ever and anon, hither she turns her eyes as though it were her chief pride, and with the stimulus she alone can supply, calls others to our aid, and excites us to place fresh trophies on her hallowed shrine. Yes, hallowed may it ever be ! May enterprize as she spreads her wings over the earth never fail to lave those wings in the blood of Calvary's Mount !

APPENDIX.

~~~~~

*Return of the Increase and Decrease of the Population of  
New South Wales, (including the District of Port Phillip,  
from the 1st of January to the 31st of December, 1844;  
and of the total number on the latter date.*

The total population of the colony was :

| In 1843                        | . | . | . | . | 165,541 |
| 1844                           | . | . | . | . | 173,377 |
|                                |   |   |   |   | 7,836   |
| Increase, being 4.73 per cent. |   |   |   |   |         |

According to our practice in examining the tables of former years, the next subject we should now consider, would be the progress made in the numbers of the adult population. But here we are stopped by an alteration in the Return itself. Hitherto it has distinguished between adults and children; but in the present instance, the distinction is wholly omitted.

The net increase by immigration, as set off against departures, was as follows :

|                                 |   |   |   |   |       |
|---------------------------------|---|---|---|---|-------|
| Immigration                     | . | . | . | . | 8,809 |
| Departures                      | . | . | . | . | 5,052 |
|                                 |   |   |   |   | 3,757 |
| Increase, being 42.65 per cent. |   |   |   |   |       |

The net increase by births was :

|                                    |   |   |   |   |                   |       |
|------------------------------------|---|---|---|---|-------------------|-------|
| Births                             | . | . | . | . | .                 | 7,956 |
| Deaths                             | . | . | . | . | .                 | 2,141 |
| Increase, the births exceeding the |   |   |   |   | <u>          </u> |       |
| deaths by 271.6 per cent.          | . |   |   |   |                   | 5,815 |

The mortality was less last year than in the year preceding. In 1843, the deaths were in the ratio of 32 to each 100 births ; in 1844, they were scarcely 27 to each 100. In England they are upwards of 70 to 100.

The net increase of Males was :

|                                |   |   |   |                         |
|--------------------------------|---|---|---|-------------------------|
| Males in 1843                  | . | . | . | 103,329                 |
| 1844                           | . | . | . | 106,309                 |
| Increase, being 2.88 per cent. |   |   |   | <u>          </u> 2,980 |

The net increase of Females was :

|                                |   |   |   |                         |
|--------------------------------|---|---|---|-------------------------|
| Females in 1843                | . | . | . | 62,212                  |
| 1844                           | . | . | . | 67,068                  |
| Increase, being 7.81 per cent. | . |   |   | <u>          </u> 4,856 |

This preponderance in the net increase of females is remarkable, being in the proportion of 163 females to 100 males. And yet the number of females born was less than that of males by 52 ; but then the number of deaths was greater amongst the males than amongst the females by 621, and of departures by 2820.

The comparative mortality of the sexes may be viewed in two forms—in relation to the whole population, and in relation to the births. In the first point of view, the deaths of males, in proportion to the whole male population, were 1 in 78 ; whilst those of females were only 1 in 89.24. In proportion to the births of males, the deaths of males were 1 in 3.62 ; whilst those of females, in proportion to the births of females, were only 1 in 5.2.

It is a singular fact that, according to the official returns, the mortality of the colony, both actual and relative, has been regularly decreasing since the year 1842. Thus :

|                        |       |
|------------------------|-------|
| Deaths in 1842 . . . . | 2,717 |
| 1843 . . . .           | 2,293 |
| 1844 . . . .           | 2,141 |

The deaths in 1844 were less than even those in 1841, by 359.

The relative mortality of the colony—that is, the proportion of deaths to population—during the last seventeen years, was as follows :

|                               |            |
|-------------------------------|------------|
| 1828 to 1840 (annual average) | 1 in 53.15 |
| 1841 . . . .                  | 1 in 62.36 |
| 1842 . . . .                  | 1 in 58.85 |
| 1843 . . . .                  | 1 in 73.19 |
| 1844 . . . .                  | 1 in 81.98 |

The average mortality in England is about 1 in 53.

The inequality of the sexes is still undergoing a very gradual correction. The proportions were :

|            |                       |
|------------|-----------------------|
| In 1836—39 | females to 100 males. |
| 1841—50    | ditto to 100 ditto.   |
| 1842—59    | ditto to 100 ditto.   |
| 1843—60    | ditto to 100 ditto.   |
| 1844—63    | ditto to 100 ditto.   |
